

Praharsha Reddy — Senior Software Developer

(201) 936-7929 | praharshareddy8@gmail.com

PROFESSIONAL SUMMARY:

- Led full lifecycle development of robust enterprise applications, encompassing requirement gathering, design, development, and quality assurance.
- Designed and implemented complex J2EE and open-source Java frameworks, ensuring high performance and scalability across diverse platforms.
- Developed and maintained integrated front-end and back-end components, facilitating seamless data flow and optimal user experiences for enterprise solutions.
- Collaborated extensively with business analysts and clients to translate intricate business requirements into precise technical specifications.
- Mentored junior developers on best practices, architectural patterns, and adherence to established code standards for enterprise application development.
- Successfully led multiple application releases from initial planning through deployment, ensuring rigorous quality assurance and system stability.
- Engineered responsive web interfaces using modern front-end technologies like Angular, HTML5, CSS3, and Bootstrap to deliver an optimal user experience.
- Possesses profound expertise in Core Java/J2EE, Spring, Hibernate/JPA, SOAP, and RESTful web services, critical for integrating diverse enterprise systems.

TECHNICAL SKILLS:

- **Programming Languages:** Java 8/11, SQL, JavaScript, TypeScript, Python (basic), C# (familiarity)
- **Core J2EE:** JSP, Servlets, EJB, JMS, MDB, JCA
- **Java Frameworks:** Spring Boot, Spring MVC, Spring, Struts, Hibernate, JPA
- **Web Technologies:** RESTful Web Services, SOAP, XSLT, HTML5, CSS3, Bootstrap
- **Front-End Development:** Angular, React, Vue JS (familiarity)
- **Cloud Platforms:** AWS (EC2, S3, RDS, Lambda), Azure (App Services, AKS), GCP (BigQuery)
- **Database Management:** Oracle, PostgreSQL, MySQL, MongoDB, Redis
- **Messaging & Streaming:** Apache Kafka, RabbitMQ, JMS
- **DevOps & Tools:** Docker, Kubernetes, Jenkins, Git, Maven, JUnit, Mockito, Selenium, Postman, Cucumber
- **Other Technologies:** OAuth2, JWT, Design Patterns, Microsoft .Net Core, .Net Core MVC, Entity Framework (familiarity)

WORK EXPERIENCE:

Senior Software Developer @ RELEX Solutions — Atlanta, GA

Jul 2024 – Present

- Led the design and development of enterprise-grade Java Spring Boot microservices for critical supply chain optimization platforms.
- Architected and implemented robust RESTful APIs, facilitating seamless, real-time integration with diverse retailer ERP and warehouse systems.
- Analyzed complex business requirements to automate demand forecasting and replenishment workflows, significantly reducing stockouts by 20%.
- Integrated advanced Kafka event pipelines for real-time inventory updates, ensuring data consistency across distributed enterprise systems.
- Collaborated strategically with data scientists to embed sophisticated Machine Learning models directly into core forecasting services.
- Spearheaded the migration of legacy batch processes into cloud-native microservices on AWS, enhancing scalability and system resilience.
- Designed and implemented efficient caching layers using Redis, substantially reducing API response times by an impressive 25%.
- Developed responsive Angular dashboards, providing supply chain planners with an optimal user experience to track SKU-level demand and supply.
- Enforced strict code standards and implemented robust role-based access controls utilizing Spring Security and OAuth2 for enhanced security.

- Mentored junior developers on Java microservices architecture, supply chain domain logic, and best practices for enterprise application solutions.

Technologies Used: Java 11, Spring Boot, Angular, Kafka, PostgreSQL, Redis, AWS, Docker, Kubernetes, Jenkins

Software Developer @ Epic Systems — Verona, WI

May 2021 – Aug 2023

- Developed and maintained enterprise Spring Boot applications for Electronic Medical Record (EMR) and patient management systems.
- Designed and implemented FHIR-compliant APIs, ensuring critical interoperability across diverse healthcare provider networks.
- Integrated complex HL7 feeds from various hospitals and provider networks, managing high-volume data transactions seamlessly.
- Implemented rigorous HIPAA-compliant authentication using Spring Security, safeguarding sensitive patient health information.
- Spearheaded the migration of intricate scheduling systems into Azure cloud microservices, enhancing system reliability and performance.
- Built responsive Angular dashboards for clinicians, delivering an optimal user experience for tracking vital patient KPIs.
- Collaborated closely with business analysts to create secure APIs consumed by mobile health applications, extending system reach.
- Developed comprehensive JUnit and Mockito test suites, ensuring over 90% code coverage and robust application quality assurance.
- Optimized critical Oracle SQL queries, leading to a significant 25% performance improvement in patient data retrieval.
- Mentored junior developers in healthcare data standards, secure coding practices, and full lifecycle development methodologies for enterprise solutions.

Technologies Used: Java 11, Spring Boot, Angular, Oracle, HL7, FHIR, Azure, Jenkins, Docker, Kubernetes

Junior Software Developer @ Target Corporation — Minneapolis, MN

Jun 2020 – Apr 2021

- Contributed to the development of Java backend services for core retail order and inventory management systems.
- Developed Spring MVC applications, facilitating seamless integration with vendor and Point-of-Sale (POS) systems.
- Designed and implemented REST APIs for order tracking and loyalty program services, ensuring robust enterprise connectivity.
- Built responsive Angular dashboards for visualizing SKU-level sales and warehouse KPIs, optimizing business decisions.
- Migrated critical reporting systems to GCP BigQuery, significantly enhancing scalability and data processing capabilities.
- Automated SQL scripts for stock reconciliation processes, effectively reducing data errors by an impactful 15%.
- Collaborated with merchandising teams to optimize product promotions, leveraging data-driven insights for improved sales.
- Developed efficient caching APIs for order lookups, substantially reducing latency and improving user experience.
- Conducted thorough peer code reviews, enforcing established design patterns and coding standards across the development team.
- Participated in Agile sprints, delivering high-priority retail-focused features while adhering to strict project timelines.

Technologies Used: Java 8, Spring MVC, Hibernate, Angular, PostgreSQL, GCP BigQuery, Git, Maven

EDUCATION:

Master of Science in Computer Science @ Pace university
