EDUCATION

M.S. Computer Science

Arizona State University, Tempe, AZ

Relevant Coursework: Cloud Computing, Data Processing at Scale, Software Web Mining

May 2026

GPA: 4/4

B.E. Computer Engineering

University of Mumbai, Mumbai, India

Relevant Coursework: Data structures and Algorithms, OOP, Data Mining, Database systems

May 2021

GPA: 9.77/10

TECHNICAL SKILLS

Languages: Python, Java, C, Go

Backend : Spring Boot, NodeJS, Django, Flask, Laravel, Spring Web Flux, GraphQL

Frontend: JavaScript, ReactJS, TypeScript, HTML, CSS, Bootstrap

Databases: DynamoDB, MySQL, MapR DB

Cloud & DevOps: Amazon Web Services, Terraform, Spark, Kafka, Jenkins, Spinnaker, Docker, Kubernetes, Git

Monitoring & Observability: Datadog, Splunk, Prometheus, Grafana

Tools & Methodologies: Linux, REST APIs, Microservices, Event-driven architectures, JMeter, Postman, Junit, Swagger

Certifications: AWS Cloud Practitioner, HashiCorp Terraform Associate

EXPERIENCE

AWS x ASU Cloud Innovation Center | Associate Cloud Developer

January 2025 – Present

Brightpoint Referral Chatbot

- Engineered a multilingual **Full stack GenAI chatbot** using **React** and **AWS Bedrock** (Claude Sonnet 3.7) to automate referral services for **675+** families across 70 Illinois counties.
- Architected robust infrastructure using **AWS CDK** and **Typescript**. Built **Lambda** functions to handle query processing, referral tracking, analytics aggregation and real-time insights generation.
- Deployed **REST & WebSocket APIs** and SMS support via **AWS Pinpoint/SNS**, enabling 24/7 access for **30%** of families without internet.

JP Morgan Chase & Co. | Software Engineer

August 2022 – August 2024

- Built scalable infrastructure using **AWS EKS** and **Terraform** for JP Morgan's NextGen Payments Platform, supporting **5,000 TPS** across **170+** countries and **120** currencies, surpassing 1 billion transactions globally.
- Developed high-performance **Java Spring WebFlux microservices** to integrate **Visa, MasterCard and Amex** payment networks into core transaction workflows.
- Championed cloud cost optimization, reducing **DynamoDB** storage costs by **25%**, via provisioned auto-scaling mode, TTL policies and data tiering to **S3 Standard-IA**.
- Automated **CI/CD Jenkins** pipelines, reducing deployment time from **6 hours** to **30 mins** for 25+ EKS microservices.
- Led **zero-downtime EKS upgrade** using dual-cluster **Blue-Green deployment**, ensuring seamless production continuity.

Nomura Holdings | Software Developer

June 2021 – August 2022

- Implemented **RESTful APIs** for Java microservices with multithreaded architecture using **Java Spring Boot, Akka, Python** and **MapR DB**, accelerating onboarding of 15+ market risk models, optimizing data persistence and retrieval.
- Led and developed a **Python Flask** application with **PyODBC library** to automate backfill of critical on-prem data into **MySQL** database, preventing operational delays and ensuring 100% data availability.
- Collaborated with Production Support to identify, debug, and resolve **70+** production issues in core Monju (MARS) Java application using **Splunk log analysis**, and **Datadog APM**, ensuring smooth production operations.
- Developed **microservices architecture** with **Kafka messaging** and optimized database performance using multithreading and **SQL/NoSQL** tuning strategies.

PROJECTS

Student Loan Retirement Match Platform | ASU x TIAA

- Developed a full-stack web platform using **React, NodeJS and TypeScript** with serverless infrastructure on (**AWS Lambda, API Gateway, DynamoDB, S3**) to educate ASU employees on SECURE 2.0 student loan matching benefits.
- Engineered a **GenAI financial advisor chatbot with AWS Bedrock** for personalized retirement recommendations.
- Built comprehensive admin dashboards using **LLMs** for enrollment trends, budget forecasting, and risk assessment.

AI-Powered Essay Grading Platform | Kansas University

- Led backend and AI integration for an automated essay-grading platform using **AWS Bedrock, Lambda, API Gateway, DynamoDB, Python and CDK**, enabling scalable, rubric-based scoring with human override and audit workflows.
- Optimized LLM performance and structured data pipelines, converting handwritten PDFs to JSON for rubric generation and reducing grading time by **90%**.
