

RAVEENDRA CHADALAWADA

JAVA DEVELOPER

+1 (601) 307-5229 | raveendrachadalawada55@gmail.com

PROFESSIONAL SUMMARY

- **Java Developer with 3+ years of experience** designing and developing scalable applications in **E-commerce, Finance, and Healthcare** domains.
- Proficient in **Java, Spring Boot, Microservices, and Full Stack Development**, with hands-on experience in **AWS and GCP** for cloud-native applications.
- Strong expertise in **API design, security, and performance optimization**, reducing system latency and enhancing transaction speed.
- Skilled in **DevOps automation** using **Jenkins, Kubernetes, Terraform, and Docker**, ensuring seamless CI/CD and faster releases.
- Experience in **event-driven architecture** using **Apache Kafka** to enable real-time data processing and messaging.
- Adept at working in **Agile teams**, collaborating with cross-functional stakeholders to deliver high-quality software solutions.
- Passionate about **problem-solving, system design, and delivering user-centric applications** with efficient code.

TECHNICAL SKILLS

Category	Technologies & Tools
Programming Languages	Java(8 11 17), Python.
Databases	MySQL, PostgreSQL, Oracle, MongoDB.
Frameworks & Libraries	Spring Boot, Spring Security, Spring Data JPA, Spring MVC, AOP, Hibernate, Apache Kafka, Resilience4J.
Cloud Platforms	AWS (EC2, S3, Lambda, RDS, CloudFormation, ECS, EKS), GCP (Big Query, AI/ML, Cloud Storage).
DevOps & CI/CD	Jenkins, Git, GitHub, Bitbucket, Terraform, Kubernetes, Docker, AWS CloudWatch, Prometheus, Grafana.
Build Tools	Maven, Gradle.
Frontend & Web Technologies	HTML5, CSS3, JavaScript, React, Angular, Node.js.
Enterprise Java & Middleware	Servlets, JSP, JDBC, Log4J, Transaction Management and Thread Management.
Core Computer Science Concepts	Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Multithreading & Concurrency, Design Patterns, System Design.
API Development & Integration	REST & SOAP Web Services, API Specification Design (RAML, Swagger, Open API), FHIR(Fast Healthcare Interoperability Resources).
Security	OAuth2, JWT, Role-Based Access Control (RBAC), SAML, LDAP, Secure Coding Standards, HIPAA Compliance, PCI-DSS Compliance.
Testing & Quality Assurance	Unit Testing, Integration Testing, Test-Driven Development(TDD), Behavior-Driven Development (BDD), JUnit, Mockito, TestNG, Performance Testing.
Event-Driven & Messaging Systems	Apache Kafka, Redis Caching, Asynchronous Processing.

WORK EXPERIENCE

BestBuy

Feb 2024 - Present

Java Full Stack Developer (Contract) | Remote

- Designed and optimized **high-traffic RESTful APIs** for product catalog, order fulfillment, and dynamic pricing modules, reducing response times by **45%** and improving system throughput using **Spring Boot, PostgreSQL, and GCP Cloud Spanner**.
- Developed **React-based dynamic UI components** for personalized customer experiences, integrating real-time analytics for A/B testing and improving conversion rates by **30%**.
- Integrated **OAuth2, JWT, and SAML** authentication for secure API access, enabling seamless single sign-on (SSO) and role-based access control.
- Established **Kafka-based event-driven communication** between order management, inventory, and pricing microservices, ensuring real-time stock synchronization and minimizing stock discrepancies by **50%**.
- Managed and deployed **CI/CD pipelines** using Jenkins, Argo CD, and Kubernetes, reducing deployment failures by **60%** and enabling **blue-green deployments** for seamless updates.
- Architected **real-time observability solutions** leveraging AWS CloudWatch and GCP Operations Suite, Prometheus, and Grafana, enabling **active incident management and reducing MTTR (Mean Time to Recovery) by 40%**.
- Strengthened and enhanced BestBuy's existing **microservices-based e-commerce platform**, improving performance, fault tolerance, and overall scalability under high-traffic conditions.

HDFC Bank

Aug 2021 - July 2022

Java Backend Developer | Mumbai, India

- Developed and refined **real-time payment processing microservices** with **Spring Boot and PostgreSQL**, ensuring high availability and enhancing transaction speed by **50%**.
- Implemented **KYC and AML (Anti-Money Laundering) verification systems**, automating identity validation and reducing manual processing time by **35%**.
- Executed **data partitioning and indexing** strategies in **PostgreSQL**, accelerating query performance by **45%** through indexing and data partitioning strategies.
- Built an **AI-powered fraud detection system** leveraging **Kafka, GCP Dataflow, and Spark ML**, preventing **15%+ fraudulent transactions** and improving compliance monitoring.
- Secured transactions with **OAuth2, JWT, and SAML**, meeting stringent **PCI-DSS security standards**.
- Optimized **multi-threaded batch processing** to optimize daily reconciliation reports, decreasing execution time by **60%**.
- Constructed a resilient cloud infrastructure using **Kubernetes, Terraform, and AWS Auto Scaling**, achieving **99.99% uptime with auto-scaling policies on AWS and GCP Kubernetes Engine (GKE)** for critical financial services.

Apollo Hospitals

July 2020 – Aug 2021

Junior Java Developer | Hyderabad, India

- Assisted in designing and developing an **Enterprise hospital management system (HMS)** using **Spring Boot and MongoDB**, enhancing patient data retrieval efficiency by **50%**.
- Designed **FHIR-compliant APIs for EHR (electronic health records) interoperability**, ensuring seamless data exchange with insurance providers and hospitals.
- Streamlined **medical claim processing workflows**, accelerating claim approval processes from **5 days to 2 days**.

- collaborated with team to develop backend solutions for **telemedicine and virtual consultation platforms**, enabling real-time video consultations and **reducing patient wait times by 40%**.
- Implemented **HIPAA-compliant access control mechanisms** to ensure patient data privacy.
- Established **Kafka-based event-driven architecture** for real-time patient appointment scheduling, improving system reliability and reducing scheduling errors by **30%**.
- Executed large-scale performance benchmarking and debugging to enhance system reliability, increasing system stability by **30%**.

EDUCATION

University of Southern Mississippi
Master's in computer science

Aug 2022 - Dec 2023
CGPA: 3.8
