

JOHNNY ROBINSON

Wake Forest, NC | (919)-518-5535 | johnny.robinson8@gmail.com|

Professional Profile | Project Manager

Experienced and innovative professional with a proven history of managing end-to-end projects and business system solutions within complex settings. Skilled at empowering both technical and business teams, overcoming obstacles, and converting complex requirements into practical solutions that boost operational efficiency and customer satisfaction. Known for transforming business needs into strategic actions, minimizing risks, and delivering projects on time and with high quality. I excel in translating complex requirements into actionable plans, overseeing project scope and deadlines, and encouraging collaboration among cross-functional teams. A clear communicator with strong leadership, excellent interpersonal skills, problem-solving ability, adaptability, and effective time management.

TECHNICAL PROFICIENCIES

Tools & Platforms: SQL, Salesforce, Jira, Azure DevOps, Confluence, Tableau, Redshift, Snowflake, SharePoint, Microsoft Excel, Mural, Figma

Methodologies: Agile, Scrum, Kanban, SDLC, Waterfall

Analysis & Delivery: Requirements Gathering, Business & Systems Analysis, Process Mapping, UAT & QA, Data Validation, KPI & Dashboard Reporting

Cloud & Data: Cloud-hosted applications, cloud data platforms (AWS/Azure – user level), BI reporting and SQL-based validation

PROFESSIONAL EXPERIENCE

Business System Analyst, NGL, (Contractor)

June 2025 — October 2025

Led business and systems analysis in a highly regulated environment, supporting compliance-driven initiatives and system enhancements.

Key Contributions:

- Led requirements elicitation by collaborating with business stakeholders to document functional and non-functional requirements aligned to regulatory and operational needs.
- Worked directly with enterprise datasets to validate, analyze, and reconcile data using SQL and BI tools, ensuring accuracy and reliability across reporting and operational systems.
- Designed and maintained KPI dashboards and performance metrics to support operational and executive reporting.
- Supported analytics and reporting using Redshift and Snowflake, validating data pipelines and reporting outputs.
- Executed end-to-end testing, including integration, regression, and UAT, to validate workflows and system behavior.
- Served as primary liaison between business and technical teams, supporting issue resolution and successful deployment.

Senior Business Analyst, Fidelity Investments

May 2021 — March 2025

Led enterprise initiatives across operational, financial, and customer-facing platforms by owning requirements discovery, guiding cross-functional delivery, and ensuring solutions were delivered on time, within scope, and aligned with business objectives.

Key Contributions:

- Led product discovery to define features, workflows, and data requirements for customer-facing and internal platforms.
- Oversaw cross-functional delivery execution, managing scope, prioritization, timelines, and stakeholder alignment to ensure the delivery of high-impact features and incremental releases.
- Owned end-to-end requirements discovery and validation, defining functional, non-functional, and data requirements, including data definitions, data flows, and metadata consistency across systems.
- Led the development of system interactions, data mappings, and integration requirements for cloud-based, data-driven platforms, ensuring standardized and reliable data use.
- Performed hands-on SQL analysis and data validation to detect inconsistencies, gaps, and data quality problems affecting reporting, analytics, and downstream users.
- Mentored junior and mid-level Business Analysts by guiding requirements development, documentation standards, and stakeholder engagement, improving analysis quality and ensuring consistent delivery across multiple initiatives.
- Conducted comprehensive stakeholder analysis to identify business needs, system impacts, dependencies, risks, and success criteria across cross-functional teams.

Business Analyst, Fidelity Investments,**January 2015 — May 2021**

Developed strategies and mitigation plans to satisfy client needs, facilitated communication between product owners and development teams, and supported cross-functional alignment of technical solutions with business goals. Oversaw risk management and project coordination for optimal results and led Agile ceremonies to maintain stakeholder alignment and remove obstacles.

Key Contributions:

- Collaborated with operations teams to align requirements and releases with IT Service Management processes, including incident response, change management, and service readiness.
- Facilitated discovery sessions and stakeholder workshops to clarify requirements and align solution directions.
- Provided analytical support to program leadership and governance bodies, assessing risks, issues, and the business impact of proposed changes.
- Documented current-state and future-state processes to support workflow optimization.
- Authored and refined epics, user stories, and acceptance criteria, ensuring requirements were testable, measurable, and aligned with business value.
- Used SQL/BI tools to analyze customer interaction data and validate outcomes.

Operation Analyst, Fidelity Investments, Durham, NC**September 2013 — January 2015**

Supported enterprise initiatives by partnering directly with clients and internal teams to analyze operational workflows, address service issues, and improve delivery outcomes within a large-scale environment.

Key Contributions:

- Analyzed client-facing operational workflows to identify service gaps, improve consistency, and support reliable delivery outcomes.
- Designed service performance dashboards and SLA metrics to track incidents and request resolution, improving SLA adherence and operational visibility for client and call center teams.
- Monitored operational metrics and service trends to surface risks and support proactive issue resolution.
- Coordinated cross-functional teams to address escalations and maintain client satisfaction.
- Supported documentation of procedures and workflows to improve operational clarity and standardization.
