Experienced IT professional with over **8+ years of banking and finance experience**. Proven track record of using information technology to generate value for a variety of financial institutions and clients. Proficient in delivering high-quality software solutions and refining business processes to meet the dynamic needs of the financial sector, which includes **banking, Payment Processing, investment, Anti-money laundering and wealth management**.

Professional Summary:

- Proficient in navigating various **Software Development Life Cycle (SDLC) models**, including both traditional approaches like **Waterfall and Agile** methodologies such as **Scrum, Kanban, Scrumban, and Waterscrumfall**.
- Gained expertise in **Financial Reporting, Accounting Standards, Transaction Handling, Risk Assessment, Asset Management, Regulatory Compliance, and Anti-Money Laundering (AML) Practices**.
- Skillfully engaged with diverse stakeholders including **Business Owners, Users, third-party vendors, and senior executives, fostering efficient collaboration**.
- Utilized a spectrum of requirement elicitation techniques over time, **encompassing Joint Application Development (JAD) sessions, Interviews, Document analysis, Focus Groups, Requirement workshops, and Questionnaires**.
- Worked closely with **Project Managers** to craft and **evaluate Project Management Plans, Project Charters, and Work Breakdown Structures (WBS)**.
- Proficient in composing various essential documents such as **Business Requirement Document (BRD), Functional Requirement Document (FRD), System Requirement Specification (SRS), and Requirement Traceability Matrix (RTM)** as per organizational standards.
- Well Versed with compliances such as **Know Your Client (KYC), Suspicious Activity Report (SAR), Payment Card Industry (PCI), Payment Card Industry Data Security Standard (PCI DSS)**,
- Skilled in generating **UML diagrams**, like **Use Cases, Activity, Sequence, Class diagrams** using **MS Visio**, alongside creating **High Fidelity, Low Fidelity Mockup Screens, wireframes** using tools like **Lucid chart & Balsamiq**.
- Possesses extensive expertise in **implementing and managing Databases, Data Table Structures, Data marts, Data Analysis, Data Integration, Data Modeling, Schemas, and OLAP operations** such as **Slice, Dice, Pivot, Roll-up, and Drill-down**, utilizing **MuleSoft** for integrating **SAP ERP and Salesforce CRM** systems.
- Proficient in data **extraction, transformation, and loading processes (ETL)** for **Data Warehousing** using tools like **Informatica and MuleSoft**, providing **technical support in Informatica usage for testing purposes**.
- Experienced in **developing interactive dashboards** featuring **heat maps, bar graphs, pie charts, and pivot tables** using **Tableau and Excel for comprehensive reporting**.
- Proficient in handling various **web services**, including **RESTful and SOAP Web Services**.
- Skilled in **defect identification, defect analysis and management** with the capacity to organize documents and monitor changes using **Jira**.
- Designed and implemented secure **Managed File Transfer (MFT)** solutions to ensure the reliable and efficient transfer of data between various systems and stakeholders, while also establishing **Electronic Data Interchange (EDI)** solutions to facilitate the seamless exchange of business documents and data between trading partners.
- , including daily stand-ups, sprint planning, retrospectives, and sprint reviews, ensuring alignment with Agile principles and practices to enhance team productivity and deliverable quality.
- Collaborated with the QA team and assisted with creating **Test plans and Test Cases** for various testing methodologies, including **User Acceptance Testing, Black-box Testing, Functional Testing, System Testing, Integration Testing, Regression Testing, Security Testing, Load/Stress Testing, and Performance Testing**. This involved both **manual and automated testing** environments, ensuring validation against the business requirements documents.

- Proficient in managing and deploying APIs using the **APIGEE API Gateway**.
- Adept at utilizing business intelligence tools, with a few years of experience in generating insights and reports and managing business analysis tasks using advanced tools and methodologies.
- Strong experience in **D365**, ensuring seamless integration and utilization within business processes.

Database & Data Analysis tools	Tableau, MS SQL server, Oracle 8/9/10, DB2, MS Access, Informatica Power Center 9.6.1, Data Mining, MuleSoft, Slicing, MS SSRS, SQL, MySQL
Data Warehousing	Data Marts, OLTP, OLAP, Multidimensional Analysis, Data Mining, Slicing/D DrillDown/Roll Up
Requirements, Test & Defect Management	JIRA, Quality Center, HP ALM, Confluence, Selenium, Cucumber, Load Runner, IBM, Rational Requisite Pro, HP QC v10.0, HP ALM V11.5
Modeling Designing	MS Visio, Smart Draw, Process Model, Blasmig, Lucid chart
Productivity tools	MS Office, MS Project, MS SharePoint, MS Word, MS PowerPoint, MS Excel
Operating Systems	Windows XP, Windows 8, Windows 10, LINUX, UNIX
SDLC Methodologies	Agile/Scrum, SAFe, Waterfall, XP, Kanban, Scrumban, Water Scrum Fall
Web Services API	AJAX, SOAP, REST, B-PIPE, XML, FIX, STML
Data Modelling	Erwin Data Modeler, Logical/Physical/Dimensional, Star/Snowflake schema
Business Skills	Change Management, Impact Analysis, Risk Analysis, Cost-Benefit Analysis, ROI Analysis, JAD Sessions, SWOT analysis, Financial Reporting, Valuation and Pricing, Budgeting

Professional Experience:

Master Card, New York city, NY
Sr. Business Systems Analyst

Date: Mar 2023- Till Date

The scope of the project was to **enhance the existing credit card repayment** system within the banking and finance domain with a **focus on data integration to cloud**. This involved streamlining the integration of various data sources and systems to **ensure smooth communication and synchronization** between different components of the repayment system. Specifically, the project aimed to address prevalent issues such as **navigation difficulties, technical glitches, and inadequate notifications experienced by customers**. By implementing these enhancements, the objective was to significantly improve the overall user experience and ensure seamless loan repayment processes for customers.

Responsibilities:

- Conducted sessions with **Subject Matter Experts (SME)** to extract end user requirements and prepared **Business Requirements Documents (BRD)**, while stakeholder input was gathered through interviews and workshops for **UI enhancements** and **credit card repayment processes**.

- Gathered, analysed data for federation and **Multi-Factor Authentication** to ensure secure migration and integration.
- Analyzed the **current workflow**, and documented **process flow diagrams** to identify areas for improvement.
- **Led and managed all phases of the SDLC for various projects**, including requirement gathering, design, development, testing, deployment, ensuring that each phase was executed efficiently, aligned with project objectives.
- Collaborated with UX/UI designers to **develop wireframes and mockups** for proposed UI enhancements by using **Balsamiq**, worked closely with the technical team to translate **functional requirements** into **technical specifications**.
- Designed and implemented secure **Managed File Transfer (MFT)** solutions to ensure the reliable and efficient transfer of data between various systems and stakeholders.
- Performed SQL queries and used stored procedures involving Data Query Language (DQL) statements to retrieve the information from the database.
- Established **EDI** solutions to facilitate the seamless exchange of business documents and data between trading partners, enhancing the efficiency of supply chain and business operations.
- Collaborating with developers, I reviewed SQL code to ensure compliance with financial regulations.
- Partnered with development teams to design workflows and configure Oracle EBS modules that optimize end-to-end banking processes such as loan management, reconciliation, and payment processing
- Designed and deployed **Power Apps** to automate workflows, enhance data management, and streamline operations within the credit card repayment system, significantly improving efficiency across departments.
- Developed **Power BI** dashboards that deliver real-time KPIs and advanced analytics, empowering the team with early issue detection and enabling proactive, data-driven decisions.
- Proficient in writing complex SQL queries to retrieve and manipulate data from relational databases.
- Conducted in-depth **data mapping sessions** to ensure the accurate alignment of data across disparate systems, facilitating seamless integration and reducing data discrepancies. This process included the **creation of detailed data mapping documents** that were used as reference throughout the **project lifecycle**.
- Collaborated with cross-functional teams to identify, resolve data inconsistencies during the **mapping process**, utilizing data transformation techniques to ensure that data structures met business requirements, adhered to industry standards.
- Facilitated requirement walkthroughs and reviews with stakeholders to ensure alignment with **project objectives** alongside to determine **data integration** requirements for the **Salesforce platform**.
- Documented **business requirements (BRD)**, functional specifications (FRD), and **use cases** for UI improvements and credit card repayment system enhancements.
- Designed and documented functional and technical specifications for custom Oracle EBS banking solutions, including configurations, custom reports, and integrations with third-party systems like payment gateways and fraud detection tools.
- Streamlined end-to-end banking processes, integrating Oracle EBS with external systems to reduce processing time for critical tasks like payment approvals and financial reporting.
- Assisted in designing and Modeling relational databases using SQL-based tools or database management systems (DBMS).
- Applied both agile and waterfall methodologies in various phases of the project to ensure comprehensive coverage of all aspects of the project lifecycle.
- Participated in **agile ceremonies** such as **sprint planning, backlog grooming, and sprint reviews** to prioritize and track progress on UI and credit card repayment system tasks.
- Worked together with technical team and assisted them in **developing a data Integration strategy to cloud**, which included reviewing the **ETL scripts** and monitoring the **data extraction, transformation, and loading (ETL) processes**, while ensuring alignment with business objectives
- Implemented robust error handling and debugging mechanisms within **MuleSoft** flows to address data integration issues and ensure high reliability of the integration processes.
- Developed, maintained, executed detailed **test scripts** for **functional, regression, and integration testing**, ensuring comprehensive coverage of system requirements and identifying critical issues early in the development cycle.
- Utilized the **Compass** platform to manage and track project milestones, deliverables, and resource allocation, providing detailed reports and insights to stakeholders to ensure project alignment with strategic objectives timelines.
- Utilized **MuleSoft's Any point template** for **Salesforce integration** and created **API documentation** using **Swagger**.
- Assisted in **developing test plans, cases, and scenarios** based on requirements and specifications.
- Conducted **user acceptance testing (UAT)** to validate that UI enhancements meet user needs and that credit card repayment system changes function as intended.

- Assisted the testing team in **UI testing** using **Selenium** and documented **defects** in **Jira** for resolution.

Environment: Scrum-SAFe, MS Visio, MS SQL server 2012, Salesforce.net, JIRA 6.4.14, Tableau 10.3, AWS, Web Services, SOA, JavaScript, MS Office Suite (MS word, MS Excel, PowerPoint), MuleSoft, Managed File Transfer (MFT), Electronic Data Interchange (EDI) Solutions, Power Apps, Power BI,

Nationwide Bank, Columbus OH
Sr. Business Systems Analyst

May 2021 to Feb 2023

The scope of the project was to modernize **the bank's infrastructure by migrating customer account data, transaction history, and authentication credentials from legacy systems to a cloud-based platform for better performance**. This involves developing data migration scripts and ETL processes to ensure accurate and consistent data transfer while minimizing manual errors. Additionally, implementing secure authentication mechanisms and a phased migration strategy will ensure uninterrupted access to banking services for customers, while enabling real-time data integration and synchronization through cloud-based middleware and APIs will enhance overall system efficiency and security.

Responsibilities:

- Conducted requirement walkthroughs with stakeholders to gather business needs and translated them into functional specifications for **Oracle Cloud solutions**, serving as a liaison between business and technology teams.
- Configured Oracle Cloud modules to meet the specific needs of business processes, ensuring alignment with industry best practices and optimizing operations.
- Assisted PM in developing project scope document, concept statement, risk analysis document, mitigation plan and proposal statement. Performed **feasibility study, SWOT analysis and cost benefit analysis**.
- Performed **GAP analysis** by creating documents to identify existing system, current business process, methods to identify deficiencies, areas for improvement & enhancements.
- Ensured and verified that the Payment Card Industry Data Security Standards (PCI DSS) Norms are followed and implemented in the Credit Card Fraud detection system
- My role involved validating SQL scripts to ensure accuracy and compliance with banking regulations.
- Managed and executed all phases of the Software Development Life Cycle (SDLC)**, ensuring that the project adhered to best practices and was completed on time and within budget.
- Responsible for creating and documenting **Business Requirements Documents (BRD), business rules, workflow diagrams, and business process modeling (BPM)** to guide the process of data migration.
- Worked with SME and project team to gather **all Data Migration and Data Mapping Requirements**.
- Captured user requirements and created in the form of **User stories** and defined **Acceptance criteria** for each of them.
- Participated in **scrum ceremonies** like **sprint planning, backlog grooming & sprint reviews** by using **Jira**.
- Mapped data fields and structures from **legacy systems to corresponding fields and structures in cloud platforms**, ensuring accurate data migration and compatibility.
- Perform data analysis using data analysis languages SQL (Structured Query Language) and R Language is used for data analysis, Modeling and manipulation.
- Collaborated with the technical team and assisted them in **developing a migration strategy**, which included reviewing **the ETL scripts** and monitoring the **data extraction, transformation, and loading (ETL) processes**, while ensuring alignment with business objectives.
- Developed SQL scripts or stored procedures to perform data manipulation tasks, such as data cleansing, transformation, and loading.
- Continuous monitoring of payment transactions and systems helps me identify and address any issues or anomalies promptly.
- Assisted the testing team in developing the **Test Plan, Test Conditions, and Test Cases** for **User Acceptance Testing (UAT)** and provided assistance in creating **the Requirement Traceability Matrix**.
- Involved in **unit, functional, regression & system Testing**, Facilitated **User Acceptance testing (UAT)**
- Created **Power BI** dashboards for real-time KPIs and advanced analytics, enabling early issue detection and supporting proactive decision-making.

- **Conducted performance tuning by optimizing SQL queries, indexing strategies, and query execution plans**
- **Conducting thorough analysis, I identify areas for improvement in our payment infrastructure to enhance efficiency and reduce costs**
- Designed, developed, and deployed **MuleSoft** APIs to facilitate seamless data integration between legacy systems and the new cloud-based platform, ensuring smooth data flow and interoperability.
- Monitored API performance and system integrations using **MuleSoft's** monitoring tools, identifying and resolving performance bottlenecks to optimize system efficiency.
- Executed various SQL queries to perform data analysis and validation using joins, sub queries, and aggregate functions.
- Collaborated with cross-functional teams to optimize the SDLC, significantly reducing release cycle times.
- **Optimized JavaScript performance in web applications**, reducing load times and improving script execution efficiency, leading to a boost in overall user satisfaction and form completion rates.
- Ensured the **accuracy, integrity, and performance** of data migrated from legacy to cloud-based platforms by validating alignment with business requirements and technical specifications through various testing methods.
- Developed user manuals, presentations, and training materials in accordance with project specifications and timelines to facilitate smooth transition and effective utilization of the **migrated data** on the cloud platform.

Environment: Jira, Informatica, MySQL, lucid chart, AWS, Bulk API, REST, JavaScript, Balsamiq, MS Office Suite (MS word, MS Excel, PowerPoint, Power BI, Oracle)

Credit Acceptance, Southfield MI
Sr. Business Systems Analyst

Sept 2019 to April 2021

The scope of the project was developed with the goal of building a strong framework for addressing various types of financial fraud in real time by using locations and various other patterns, to identify fraud such as identity theft, loan modification fraud, phishing schemes, and loan money misuse. The system aims to provide proactive surveillance and protection by integrating innovative algorithms and methods, thereby protecting borrowers' financial assets and personal data.

Responsibilities:

- Conducted **interviews with clients, SMEs, and business users** to gather their current and future needs, transforming them into Functional Specifications, while employing diverse methods **like JAD sessions, surveys, interviews, workshops, and interface analysis to elicit requirements.**
- Conducted thorough **GAP analysis** of existing systems and processes to identify potential areas susceptible to fraud.
- Facilitated workshops and meetings with **subject matter experts (SMEs)** to gather requirements and insights into fraud detection mechanisms and loan lending processes.
- Verified all aspects of **Client Identification Program (CIP)** and necessary account documents are provided and in **with know Your (KYC) and Bank Act (BSA).**
- Monitored and analyzed system performance and data trends to identify **potential fraud patterns** and continuously improve fraud detection capabilities.
- Utilized **Lucid chart and Balsamiq** to create visual representations of **system architecture, process flows, and user interface designs**, facilitating effective communication and collaboration among stakeholders.
- Prepared detailed documentations, including **BRD (Business Requirements Documents)** and **SRSD (software Requirements Specifications Documents)**, and **functional specifications** and outlined the necessary features and functionalities for fraud detection systems.
- Working closely with data analysts and data scientists to define **data requirements and algorithms** for **detecting fraudulent activities.**
- Participated in the **designing and implementation** of fraud detection models and algorithms, ensuring alignment with business objectives and regulatory requirements.
- Collaborated with IT teams to **ensure seamless integration of fraud detection systems** with existing infrastructure and applications.

- Created and debugged complex ETL processes using T-SQL queries, functions, stored procedures and SQL Server.
- Developed **use cases, test cases, and test plans** to systematically validate the effectiveness of algorithms in addressing fraudulent activities, ensuring comprehensive coverage of scenarios and thorough testing to verify algorithm accuracy and reliability.
- Strong technical background with experience in cloud platforms (**AWS, Azure, GCP**) and Infrastructure as Code (**IaC**) tools like Terraform and CloudFormation.
- **Customized form behaviours using advanced JavaScript techniques**, including asynchronous data handling and API integrations, allowing for real-time updates and seamless user experiences during the submission process.
- Assisted in conducting a testing process, including **unit testing, integration testing, system testing, regression testing, performance testing, and security testing**, and facilitated **user acceptance testing (UAT)** to validate the effectiveness and accuracy of the fraud detection mechanisms.
- Provided training and support to end users on how to effectively utilize and interpret fraud detection tools and systems on their interfaces.

Environment: Jira, Informatica, MySQL, AWS, Bulk API, REST API, Balsamiq, MS Office Suite (Word, Excel, PowerPoint), Python, Tableau, SAS, Git, Jenkins, Slack, Confluence, lucid chart, JavaScript, Jenkins, Docker, Kubernetes, CloudFormation

Wayfair, Boston MA

May 2018 – Aug 2019

BUSINESS SYSTEMS ANALYST

The project scope was to provide online banking facilities to its customers. The project aimed at building software that would facilitate viewing of multiple account balances, statements, pending transactions and cancelled transactions, tracking deposits, transfer of funds between accounts, transfer history and maintenance of customer profile.

Responsibilities

- Assisted and worked with Project manager in creating and assigned task through **Work Break-down Structure (WBS)**.
- Worked **in Waterfall** as **System Development Life Cycle (SDLC)**.
- **Gathered requirements** from key stakeholders, customers and SMEs to define the scope and requirements **of online banking system**.
- Worked closely with the development team to verify that business needs are fulfilled, and deliverables are produced within specified **budget, quality and time**.
- Defined the context of the system by creating **various Use Cases** for the development system requirements specifications encompassing **Functional and Non-Functional requirements**.
- **Developed UML Diagrams** for modeling static and dynamic aspects of Online Banking System.
- Created **Requirements Traceability Matrix (RTM)** using HP QC tool.
- Developed **data maps** for retrieval of information from existing account systems and outlined security measures for accessibility and transmission of information.
- Created **ad-hoc** reports **using MS-Excel and Pivot tables** to do the calculations and creating reports accordingly.
- Developed plans **for verification and validation** of requirements at all levels so that developed software successfully fulfilled user expectations and business needs.
- Worked closely with Project Manager for any change request and helped to do **Impact Analysis**.
- Helped creating and modifying **SQL queries** to match the requirements.

ENVIRONMENT: Waterfall, MS Office, SQL, UAT Testing, HP QC,.

AXIS BANK, BANGALORE INDIA
BUSINESS ANALYST

Aug 2016- Jan 2018

Project involved setting up **web enabled access** to customers to manage **their mortgage accounts online**. The user had to login and then he could review his payment information, view transaction history, and make payment online.

Responsibilities:

- Determined **User, Business and Functional Requirements**.
- **Elicited requirements** from the stakeholders and analyzed them for consistency, flexibility, and completeness.
- Participated actively in assembling the **JAD team** and in conducting the weekly sessions from **requirements gathering** phase to the sign-off of the application after testing.
- Organized **workshops with Subject Matter Experts** to obtain domain level information. Developed a vision plan that defined **the primary goals and objectives of the project**.
- Identified actors and use cases to create **use case diagrams** that described the behavior of the system.
- Facilitated collection of **functional requirements** from system users and preparation of business requirement documents using **Rational Requisite Pro**. Created data, functional and quality requirements.
- Involved in version control management for storage and distribution of documentation using **Rational ClearCase**.
- Trained and mentored the team members in **RUP** and the **Rational Suite**. Created **class diagrams, use case diagrams and sequence diagrams** to view the system from different perspectives.
- Created the **Business Architecture document** to provide an overview of different aspects of the application and documented how **business goals** were reflected in the requirements.
- Coordinated **work plans** between project manager and client using MS Project.
- Followed the UML based methods using Rational Rose to create: **Use Cases, Activity Diagrams/State Chart Diagrams, Sequence Diagrams**.
- Worked with management to create and communicate critical information to the user community via email and discussion boards.
- Validated **technical designs** created by IT developers against functional specifications. Reviewed **system-testing results** with the project and technical teams.

ENVIRONMENT: Waterfall, MS Word, MS Excel, MS Project, MS Visio, SQL, Oracle, Rational Unified Process (RUP), Rational Clear quest, Rational Rose.

ICICI BANK, BANGALORE INDIA
Business systems Analyst

Date: Mar 2015 – July 2016

Credit Card Application System/Interactive Voice Response (IVR)

The scope of the project was to build a **credit card application system** in addition to asset protection and trust management. **The Interactive Voice Response (IVR) application** provided its card holders access to 24*7 call center with various card products and service offerings such as New Accounts, Pay Balances, Report Lost or Stolen Card, Credit Line Increase, Address Change, Account Balance, and Payment Due Dates) and the option to talk to live agents for the assistance.

Roles and Responsibilities:

- Conducted **interviews** with project managers, SMEs business users to **collect requirement** and business process information.
- Developed PowerPoint presentations for monthly meetings with **upper management**.
- Teamed up with the credit allocation department to perform market survey and learn client requirements to assist the technical team in Software development.
- Assisted Engineers in coming up with technical documents **Functional design documents**.
- Assisted in selecting the technology for the application based on **Cost-Effectiveness** and Quality with an eye towards the future.
- Used **SharePoint** for content management and document management.
- Used **UML** to prepare **Use Cases** from the gathered requirements and created diagrams **using Rational Rose**.

- Assisted in preparation of **UAT test plan, Test Cases, Testing Cycle schedules, Test Scenarios** and implemented them with QA team.

Environment: Waterfall, UML, SQL Server, MS Office, MS Project, DB2, SharePoint.

Education: Bachelor's in computer science at PES University 2015
