OBJECTIVE SUMMARY

- 5+ years of professional IT experience in Design & Development of **Enterprise Applications, Web Applications, and Web Services** in **Java/J2EE** involving Cloud Computing platforms like **Amazon Web Services (AWS)**.
- As a Java/J2EE Developer, expert in all phases of SDLC **Analysis, Design, Development, Testing and Deployment** and highly competent in gathering user requirements.
- Experience in **Spring Boot** which is radically faster in building cloud microservices and develop spring-based application with very less configuration.
- Experience with working different spring modules like **Spring IOC** (Dependency Injection), **Spring MVC, Spring AOP, Spring Data (JDBC, ORM) and Spring Batch**.
- Experienced with Cloud Computing environment like **Amazon Web Services (AWS), Google Cloud Platform (GCP), Docker, Kubernetes, and Spring Cloud**.
- Experience in AWS Cloud Platform modules that includes **S3, Lambda, Elastic Cloud Compute (EC2), Elastic Container Service (ECS), Simple Queue Service (SQS), CloudWatch and Auto Scaling**.
- Experience with **J2EE design patterns** such as MVC, Singleton, Factory, Builder, and Data Access Object.
- Strong Experience with **java** technologies including **Java** Collections, Interfaces, Serialization, IO, **Exception Handling, Multi-Threading**, Java Beans Web Services, **REST API and XML**.
- Experience in **client scripting language** and **server scripting languages** like **JavaScript, React, jQuery, AJAX, HTML, CSS and JSON**.
- Strong experience in database design and knowledge on different databases like **MySQL, PostgreSQL, NoSQL DB (MongoDB, DynamoDB, Elasticsearch, Redis, Aerospike and Cassandra)**.
- Experienced in writing complex queries in **SQL and PL/SQL Stored Procedures, Functions, Packages, Triggers and optimization with Oracle and MySQL databases**.
- Expertise in the messaging queues like **Rabbit MQ, Active MQ, and Apache Kafka**.
- Automated the build process by using **Ant, Maven, SVN and Gradle** build tools.
- Experienced in testing **REST** web services using **Postman, SoapUI, and Swagger UI**.
- Configured **Docker** container service and build a pipeline **Jenkins** tool for continuously integrating and deploying an application on servers.
- Experience in unit testing the applications using **JUnit** and **Selenium**. Used mocking framework like **Mockito, Spy, JMockit**. Spring test with **Groovy** for debugging and testing the applications.
- **TDD Framework** and developed logging and standard mechanism based on **Log4j** and **SLf4J**.
- Test driven development of **Waterfall** and **Agile/Scrum Methodology** to produce high quality software.
- Hands-on experience working with version control tools such as **Git** and **SVN**.
- Proficiency in programming with different **IDEs** like **IntelliJ, VSCode, Eclipse, and NetBeans**.
- Utilized **JIRA, Kanban, and Confluence** to keep track of bugs, user stories and to manage the project.
- Good in communicating with clients, customers, managers and other teams in the enterprise at all levels.
- Effective problem-solving skills, outstanding interpersonal skills, good in written and verbal communication.

TECHNICAL SKILLS

Languages:	Java, Python, Node.js, SQL, PLSQL, XML, JavaScript
Java Technologies:	Core Java, J2EE, Servlet, JSP, Struts, jQuery, JMS, JDBC, JPA
J2EE Frameworks:	Spring Boot, Spring MVC, Hibernate, Web Services, Jersey, Ant, Maven, Junit, REST, SOAP, Microservices, SOA
Databases:	MySQL, PostgreSQL, MongoDB, Elasticsearch, DynamoDB, Redis, Aerospike, OracleDB, DB2, PLSQL
Cloud Computing:	AWS [S3, EC2, ECS, Lambda, SQS, Cloudwatch, DynamoDB], GCP, Azure, Docker, Kubernetes, Spring Cloud
Design Patterns:	Dependency Injection, MVC, Singleton, Factory, Builder, DAO, Facade
Web Technologies:	Angular, React.js, HTML5, CSS5, XML, JQuery
Web/Application Servers:	Tomcat, Netty, JBoss, Web Sphere, Web Logic
IDE Tools:	IntelliJ, VSCode, Eclipse, Net Beans, Spring Tool Suite (STS)
Build-Automation/Issue Tracking Tools:	Gradle, Maven, ANT, Jenkins, JIRA, Kanban, Confluence
Version Control Tools:	GIT, SVN
Testing Tools/ Others:	Junit, Selenium, SoapUI, TestNG, Mockito, Spy, JMockit
Bigdata Technologies:	Hadoop, Apache Spark, Solr, Apache Kafka
Operating systems:	MacOS, Windows, UNIX, LINUX

PROFESSIONAL EXPERIENCE

Tekion – Pleasanton, California

Software Engineer (Backend Java developer)

Feb 2021 – Sep 2023

Enterprise cloud native platform that offers solutions such as digital retail, parts management, accounting and data analytics for the automotive sector.

Responsibilities:

- Developed a **metadata-driven, pluggable, API-first low-code** platform from the ground up that allows businesses and developers to build, configure, deploy and host robust apps.
- Designed and deployed microservices using **Java, Spring Boot**, and **AWS**, with experience in features like third party integrations, cloud database migration, container orchestration, caching, and messaging.
- Developed Automotive Digital Retail Platform modules (Dealer-Onboarding, Compliance, Order Management System) that was utilized by **35+ OEMs** and **4000+ dealers** to sell **500k+** vehicles.
- Used **spring framework** and **J2EE** components, utilized Spring Boot, Spring MVC, and DAO modules. Developed controller classes, backend processes and database interaction.
- Built and maintained microservices while leveraging our modern, event-driven cloud architecture **Kafka**.
- Engineered a flexible tagging and search system, leveraging **Elasticsearch** to categorize content with tags and enable content discovery through quick search results and increased efficiency by **15%**.
- Worked with NoSQL databases like **AWS DynamoDB, MongoDB, Elasticsearch**, and **Cassandra**. Experience creating **REST APIs** and **web services**.
- Involved in writing **Java API** for Amazon **Lambda** to manage some of the **AWS** services.

- Managed AWS infrastructure, notably with **EC2/ECS**; employed **AWS SDK** for tasks like connecting with Amazon **SQS** for email processing, reflecting proficiency in cloud solutions.
- Developed a Plugin Extension for VSCode using **TypeScript**, enabling **500+** users to download and edit applications offline. Implemented features that enhanced user's efficiency and productivity by **30%**.
- Utilized containerization technologies like **Docker**, along with orchestration skills to manage and scale microservices, along with good familiarity with relational databases such as **MySQL** and **PostgreSQL**.
- Skilled in **DevOps** practices, including continuous integration and continuous delivery (CI/CD) pipelines using tools like **Jenkins**, **Gradle**, **Maven**, and **GIT**.
- Proficient in testing methodologies and API frameworks utilizing **JUnit** and **Mockito** for unit testing, ensuring the quality and reliability of software solutions.
- Documented APIs using **Swagger**, providing clear guidelines for frontend developers, and enabling utilization of backend functionality.
- Leading a team of **3 members**, overseeing their work, providing guidance, and ensuring project milestones were met.
- Implemented effective communication and collaboration strategies within the team to enhance productivity and deliver high-quality software solutions.
- Played a pivotal role in resource allocation, task delegation, and mentoring team members to foster their professional growth and development.

Tech Stack: Java, Spring Boot, Amazon Web Services (AWS), TypeScript, JavaScript, Restful-API, Apache Kafka, Linux, Docker, GIT, Postman, Swagger, ELK Stack, MySQL, MongoDB, DynamoDB, PostgreSQL, Redis, Jenkins

Mozilla – Remote, USA

Software Engineer – Open Source (Full Stack Java developer)

Jan 2020 – Jan 2021

Software company that develops web browsers, private networks and internet-related applications for businesses. Promotes openness, innovation, and participation on the internet.

Responsibilities:

- Developed an end-to-end social media platform using **Java**, **Spring Boot**, **Angular**, **React** and **Google Cloud Platform (GCP)**. Implemented microservices architecture and REST APIs for feed, users, posts, and content moderation.
- Built reactive frontend in **React** to provide seamless social interactions and real-time updates using **web sockets** and **Kafka** messaging.
- Utilized various **JavaScript** and **jQuery** libraries bootstrap, **AJAX**, **AngularJS** to form validation and other interactive features.
- Implemented Kafka topics, **producers** and **consumers** for decoupled communication between microservices.
- Modelled data in **MongoDB** using normalized schemas optimized for query performance. Leveraged **indexing** for faster lookups.
- Implemented **JWT** authorization for securing the platform login system along with **OAuth** integration.
- Built aggregations and analytics on top of search results using **Elasticsearch**.

- Containerized services using **Docker** for portability and high availability.
- Deployed and operated the platform on **Google Cloud** leveraging **Kubernetes** for auto scaling.
- Added a feature to filter hate speech content using **PyTorch** and **BERT**, trained with **2M** data points.
- Configured web Applications using **Tomcat** and **Netty**.
- Performed load testing using **Jmeter** and optimized services to handle **3000 req/sec**.
- Created technical documentation outlining application architecture, API specifications, and key components to enable maintenance and future development.

Tech Stack: Java, Spring Boot, React.js, Javascript, jQuery, Python, Google Cloud Platform (GCP), OAuth2, Docker, Kubernetes, Restful-API, Apache Kafka, GIT, Postman, Swagger, Elasticsearch, MongoDB, Pytorch

ZS Associates [Client: Pfizer Inc] – New Delhi India

Software Engineer (Java Application developer)

Aug 2018 – July 2019

Pharmaceutical company that develops and commercializes medicines and vaccines for the healthcare industry.

Responsibilities:

- Developed an end-to-end **Java analytics** application using **Spring MVC**, **Hibernate** and **core Java** concepts including JDBC, collections, regular expressions, logging etc. to generate insights from large datasets and optimize business outcomes.
- Built **REST APIs** with **Spring Web** to expose core services like data ingestion, transformation, model training and predictions.
- Implemented the application using **J2EE** design patterns like **Singleton**, **Builder** pattern.
- Developed Java utility components to handle common functions like date conversion, exceptions.
- Implemented mapping between relational database tables and object and java objects using **Hibernate**.
- Built data pipelines to ingest sales, marketing, demographic data from **MySQL** and **JSON** sources into Kafka.
- Wrote **PySpark ETL** jobs to process and transform large datasets hosted on **S3** into analysis-ready formats.
- Trained and productionized ML models using **Sklearn** and **TensorFlow** to optimize medical rep assignment and targeting.
- Automated generation of **Tableau** dashboards and reports using **Python** scripts for refreshed analytics.
- Integrated these dashboards into the UI using embedded **JavaScript** for seamless data exploration.
- Implemented end-to-end automation testing using **Selenium** and **JUnit**.
- Adopted agile practices like source control with **Git** and **code reviews**.
- Used **TDD** as the development methodology throughout the project.
- Used **log4j** for logging and tracing the messages.
- Involved in Bug Fixing of the application.
- Worked closely with product and sales teams to refine requirements and deliver incremental value.

Tech Stack: Java, Spring, Hibernate, Javascript, Python, AWS, Restful APIs, Kafka, Git, SOAP UI, MySQL, PySpark, SkLearn, Tensorflow, Tableau, JSON, Selenium, JUnit, JSON

EDUCATION

- **Master of Science** in Computer Science, Stony Brook University, New York
GPA: 3.70/4.0
Coursework: Algorithms, Data Science, Natural Language Processing, Databases, Data Mining, Probability & Statistics, Visualization
- **Bachelor of Technology** in Computer Science, University of Petroleum and Energy Studies, India
GPA: 8.40/10.0
Coursework: Data Structures, Object Oriented Programming, Software Engineering, Operating Systems, RDMS, Cloud Computing

ACADEMIC PROJECTS

- **Deep Humor** [Python, scikit-learn, Deep learning]
Developed a joke generator using pre-trained generative model and further classified jokes with a fine-tuned BERT to classify the generated jokes and attempt to understand what distinguish joke sentence (s) from non-joke sentence(s). As a result, the classifier model was able to achieve 96% recall accuracy and revealed that it also contains specific internal attention patterns creating a structured “setup and punchline” format for the generated jokes.
- **Real Time Social Event Monitoring** [Java, Apache Spark]
Fetched real time tweets via Twitter API and processed them using Apache Spark. Further, clustered the tweets based on hot hashtags using k-means clustering. Utilized dialect processing and pair-wise Cosine Similarity on the clustered data to finally extract the most information tweet or event.
- **Air Pollution Dashboard** [Python, d3.js, AJAX]
Developed an interactive dashboard using 1.5M pollution data to capture temporal aspects of pollutants and respiratory deaths in the United States. Incorporated brushing and linking feature for visualizing the data using choropleth, time-series, parallel coordinate and MDS plots.
