

# Rohith Srinivasa | Data Analyst

Tempe, AZ | +1 480-803-4670 | [rohithsrinivasa2@gmail.com](mailto:rohithsrinivasa2@gmail.com) | [Linkedin](#) | [Portfolio](#)

## SUMMARY

**Data Analyst with 4+ years of experience** developing SQL queries, Power BI dashboards, and automated reporting workflows supporting KPI tracking, operational analysis, and business reporting initiatives. Skilled in SQL, Python, Power BI, Excel, DAX, ETL processes, and data validation with hands-on experience analyzing operational and transactional datasets within enterprise environments. Improved reporting efficiency, dashboard performance, and data accuracy through reporting automation, process optimization, and analytical problem-solving. Experience supporting cross-functional teams with dashboard development, trend analysis, reporting standardization, and operational insights. Strong background in data cleansing, reconciliation, business intelligence reporting, and performance monitoring across analytics and reporting functions.

## TECHNICAL SKILLS

**Data Analytics:** Data Analysis, KPI Tracking, Operational Analysis, Business Reporting, Ad Hoc Analysis, Trend Analysis, Reporting Automation, Dashboard Reporting, Data Validation, Data Cleansing, Data Reconciliation, Root Cause Analysis, Business Intelligence, Performance Monitoring

**Programming & Query Languages:** SQL, Python, R, Excel, VBA

**Visualization & Reporting Tools:** Power BI, DAX, Power Query, Tableau, Excel Dashboards, Data Visualization

**Databases & Data Processing:** MySQL, PostgreSQL, SQL Server, Relational Databases, Data Modeling, ETL, Data Transformation, Data Integration, Structured Data Processing

**Python Libraries:** Pandas, NumPy, Matplotlib, Scikit-learn, Jupyter Notebook

**Cloud & Platforms:** AWS (S3, Redshift), Azure Data Factory, BigQuery

**Tools & Methodologies:** Git, JIRA, Agile, SDLC, Microsoft Office Suite

**Domain Experience:** Supply Chain Analytics, IoT Analytics, Operations Reporting, Inventory Analysis, Enterprise Reporting, Business Operations Monitoring

## PROFESSIONAL EXPERIENCE

### Data Analyst

Aug 2025 - Present | AZ, USA

#### Avnet

- Increased reporting efficiency by 30% through automated SQL workflows supporting KPI tracking, operational reporting, inventory analysis, and business performance monitoring across enterprise supply chain and reporting environments.
- Built 12+ Power BI dashboards using DAX calculations, drill-through reporting, and automated refresh schedules, improving visibility into operational performance, reporting trends, and executive-level business metrics across departments.
- Reduced manual reporting effort by 40% through automation of recurring reporting and data preparation processes using SQL and Python, improving reporting consistency and reducing delays in business reporting delivery.
- Improved reporting accuracy by 25% after validating, cleansing, and reconciling multi-source operational datasets used for dashboard reporting, business analysis, inventory tracking, and enterprise operational performance reviews.
- Identified reporting gaps, workflow inefficiencies, and data inconsistencies through operational analysis, helping teams improve reporting processes, strengthen KPI tracking, and support faster operational decision-making across business functions.
- Standardized KPI definitions, dashboard calculations, and reporting structures across reporting teams, improving consistency of business metrics used during leadership reviews and operational performance discussions organization-wide successfully.
- Supported ETL and data transformation processes involving structured operational and transactional datasets, improving dashboard refresh performance and reducing delays in operational reporting and business intelligence reporting activities.
- Partnered with reporting, operations, and business teams to deliver analytical dashboards and operational reports supporting performance monitoring, business reviews, and enterprise operational reporting initiatives across departments successfully.

### Software AG

Apr 2022 - Jul 2024 | India

#### IoT & Data Analyst

- Reduced reporting turnaround time by 35% through optimized SQL extraction and transformation workflows supporting operational KPI reporting, business performance analysis, and enterprise operational reporting across multiple reporting systems.
- Developed Power BI dashboards tracking utilization trends, operational metrics, downtime analysis, and system performance, improving visibility into operational activities for leadership teams and operational stakeholders across departments significantly.
- Improved operational uptime by 22% through analysis of IoT and operational datasets, identifying recurring anomaly patterns, utilization gaps, and process inefficiencies affecting system reliability and operational continuity.
- Decreased manual reporting activities by 45% through automation of recurring reporting workflows using SQL, Python, and Power BI, improving reporting efficiency and increasing availability of operational reporting insights organization-wide.

- Processed and validated operational datasets containing more than one million monthly records, improving reporting quality, reducing inconsistencies, and supporting accurate dashboard reporting and operational decision-making across enterprise analytics initiatives.
- Increased dashboard performance by 28% after optimizing SQL queries, reporting logic, and backend data models supporting scalable reporting solutions, faster dashboard responsiveness, and improved operational analytics performance organization-wide.
- Conducted root cause analysis on operational and IoT reporting data, identifying recurring process failures, reporting inconsistencies, and operational bottlenecks contributing to delays and performance inefficiencies across reporting environments.
- Collaborated with engineering and operations teams to define operational KPIs, reporting metrics, and dashboard requirements supporting business analysis, operational monitoring, and enterprise reporting initiatives across organizational departments successfully.
- Delivered operational analysis and reporting support for leadership reviews, planning discussions, and performance evaluations, helping management teams monitor efficiency trends and identify operational improvement opportunities across business functions.
- Improved reporting consistency across departments by standardizing dashboard metrics, reporting calculations, and KPI structures used for operational analysis, business reviews, and enterprise performance monitoring activities organization-wide successfully.

## **Data Analyst**

**Jan 2021 - Mar 2022 | India**

### **Mphasis**

- Developed SQL queries, Power BI dashboards, and Excel reports supporting operational KPI tracking, business reporting, and performance analysis across enterprise reporting environments and operational business functions successfully organization-wide.
- Reduced manual reporting effort by 30% through automation of recurring SQL and Excel reporting workflows, improving reporting accuracy, workflow consistency, and delivery timelines for operational and business performance reports.
- Improved reporting quality through validation, reconciliation, and transformation of operational datasets, reducing inconsistencies across reporting systems and strengthening accuracy of dashboard reporting used for business decision-making activities.
- Created interactive reporting dashboards improving visibility into operational metrics, reporting trends, and business performance indicators supporting leadership reviews and operational analysis across enterprise reporting environments successfully organization-wide.
- Identified reporting gaps, operational bottlenecks, and workflow inefficiencies through analysis of structured business datasets, helping teams improve reporting accuracy, operational visibility, and performance tracking across reporting functions significantly.
- Supported ad hoc reporting and operational analysis requests for business stakeholders, assisting management reviews, reporting activities, and identification of operational improvement opportunities across enterprise reporting and operational functions consistently.
- Improved reporting efficiency by enhancing SQL reporting logic and dashboard refresh processes, reducing delays in report generation and supporting faster access to operational and business performance metrics organization-wide successfully.
- Supported migration and standardization of reporting workflows across business teams, improving consistency of reporting structures, dashboard calculations, and operational metrics used for enterprise reporting and business analysis activities.

## **EDUCATION**

### **MS in Data Science and Analytics**

**May 2026 | AZ, USA**

Arizona State University

### **BE in Computer Science and Engineering**

**May 2022 | India**

Don Bosco Institute of Technology
