OBJECTIVE

Motivated Junior Full Stack Developer with strong training in Java, React.js, and RESTful API design. Completed rigorous projects in SDLC and automation testing, contributing to user-centered, innovative solutions. Familiar with Agile development and eager to grow technical skills in building responsive, cloud-integrated applications and microservices architectures. Committed to leveraging technical expertise to deliver high-quality software.

EDUCATION AND SKILLS

The University of North Carolina at Charlotte

Graduation: December 2023

- Bachelor of Science in Computer Science with a concentration in Web and Mobile Applications and a minor in Mathematics.
- Overall GPA: 3.6

Technical Skills

- Programming Languages: OOP, Java, JavaScript, TypeScript, HTML, CSS, SQL, Python, Kotlin, C#, C++
- Software Development: Git, GitHub, IntelliJ, Visual Studio, Code Review
- Software Testing: Postman, Selenium, Cucumber, JUnit, Mockito
- Project Management: Agile, Scrum, SDLC, Jira, Trello, Microsoft Teams, Zoom, Communication
- DevOps & Cloud: AWS, Google Cloud, MongoDB, Firebase

WORK EXPERIENCE

Infosys - Charlotte, NC / Remote

December 2024 - December 2025

Associate - Software Development Engineer in Test

- Completed comprehensive training in SDLC, automation testing, API testing, Java coding, Spring Boot, and REST API.
- Participated in advanced workshops and training on Secure SDLC, GitHub Copilot for Testers, and Generative AI in test automation.

Revature - Remote

September 2024 - December 2024

Software Engineer in Test Training

- Gained knowledge and skills in programming Java and SQL in a business context.
- Participated in learning about the aspects of software testing, like test philosophy, test documentation, test case design, and testing lifecycles.
- Applied the software testing philosophy in manual and automated testing, utilizing resources such as Jira, Selenium, and Cucumber.
- Employed skills and knowledge gained, where it was required to perform manual and automated testing on a web application, such that it was an actual business project.

Bonefish Grill - Concord, NC

May 2021 - Present

Host, To-Go Specialist

- Provided quality customer service to over 100 customers weekly by effectively addressing concerns and delivering personalized solutions through strong communication skills.
- Welcomed guests and seated them according to a rotation system, reducing wait times by 20% through efficient guest management and balancing server workload.
- Planned large events for up to 45 attendees, ensuring a 95% event success rate by coordinating with staff, managing schedules, and overseeing logistics.

- Provided expedited service and processed payments for 40+ to-go customers daily by streamlining payment procedures and optimizing order preparation.

Harris Teeter - Davidson, NC

February 2019 - August 2021

Customer Service Clerk, Cashier

- Managed a team of 5+ cashiers, achieving a high accuracy rate in cash handling by implementing clear guidelines and performance monitoring.
- Assisted 100+ customers weekly with various tasks, boosting customer satisfaction scores by delivering personalized assistance and resolving issues promptly.
- Processed payments and refunds efficiently, reducing transaction errors by 25% through meticulous attention to detail and adhering to company policies.
- Handled Western Union money transfers, processing over 100 transfers weekly with a 100% compliance rate by following financial regulations and security procedures.

PROJECTS

- **Music Events Web Application:** This cross-browser application runs locally on Node.js, where users can create an account and view events posted to MongoDB. Through front-end development using HTML and CSS, the responsive design enables users to RSVP to events, allowing them to connect with people.
- **Sales Payout Program:** Developed in C#, this program takes a specific ID to log a user in as an employee or manager. Employees can input sales data to view their sales and total commission. Managers can view all employee information and add or delete employees.
- **Bioquest Mobile Application:** Using AI imaging techniques, Bioquest enables users to capture an animal, and it returns the animal's name and details. An interactive map is created from recent animal sightings near the user, and a badge system is implemented to reward the user for finding animals.
- **Planetarium Application Testing:** Given a Planetarium web application, my team and I were tasked with performing manual and automated testing based on specified business requirements. We performed Sprints and followed the testing philosophy to successfully develop test cases, automate them, and provide results.

COMMUNITY INVOLVEMENT

- Member of Pride of Niner Nation Marching Band **2020 - 2023**
- Volunteer at Cox Mill Elementary Science Club **2018 - 2020**
