Career Objective

iOS Developer with 4+ years of experience building scalable, secure, and user-focused apps using Swift, UIKit. Proficient in Swift Concurrency, Core Data, Combine, and CI/CD pipelines, with expertise in MVVM and modular architectures. Seeking a Senior or Mid-level iOS Developer role to drive innovation, mentor teams, and deliver impactful mobile solutions.

Professional Summary

- Experience in designing, architecting, and deploying scalable iOS applications using Swift, UIKit, and Objective-C.
 - Proficient in Swift Concurrency, Combine, and Core Data for building performant, responsive apps.
 - Strong expertise in CI/CD automation (Fastlane, GitHub Actions, Jenkins) and App Store deployment processes.
 - Experienced in modular architecture (MVVM, VIPER, POP) with focus on maintainability, testability, and scalability.
 - Adept at mentoring junior developers, conducting code reviews, and leading cross-functional feature delivery in Agile/Scrum teams.
 - Proven ability to improve performance, reliability, and crash-free sessions (99.7%) in apps used by 100K+.
 - Passionate about system design, reusable SwiftUI components, and performance optimization to deliver user-centric iOS applications.
 - Experienced in Dependency Injection, Observer Pattern, and reusable frameworks for scalable iOS app design.
 - Skilled in performance tuning, memory optimization, and scalability improvements for large-scale enterprise apps.
-

Technical Skills

- Languages & Frameworks: Swift, SwiftUI, Objective-C, UIKit, Combine, Core Data, Realm, MapKit, PassKit, ARKit
- Architectures: MVVM, VIPER, Modular Architecture, Protocol-Oriented Programming, TDD
- Concurrency: Swift async/await, Grand Central Dispatch (GCD), OperationQueue, Combine pipelines
- Tools: Xcode, XCTest, XCUITest, Fastlane, GitHub Actions, Jenkins, Swift Package Manager (SPM), TestFlight, Postman
- Mobile Services: Push Notifications (APNs, FCM), In-App Purchases, Deep Linking, Auto Layout, Storyboards, SwiftUI Components
- APIs & Integrations: RESTful APIs, GraphQL, OAuth 2.0, JSON, Third-Party SDKs (Payments, Social Login, Analytics)

- Cloud & Analytics: Firebase (Realtime DB, Crashlytics, Remote Config), AWS, Azure, Adobe Analytics, Google Analytics
 - Collaboration & Tracking: Jira, Confluence, Trello, Slack, Agile/Scrum
-

Professional Experience

Software Engineer - iOS | Walmart Global Tech | https://tech.walmart.com/content/walmart-global-tech/en_us.html
| June 2023 - Present

Walmart is a global retail technology leader operating Walmart.com, Walmart+ subscription service and leveraging cutting-edge technology in e-commerce, supply chain automation and mobile commerce to serve millions of customers daily.

- Engineered high-impact features for the Walmart+ iOS app in Swift, supporting millions of active members and improving responsiveness and scalability.
- Delivered end-to-end features with GraphQL API integration, reducing API response times and ensuring type safety with Apollo Client code generation.
- Built reusable UI components aligned with Walmart's WCP Design System, accelerating UI development across multiple teams.
- Conducted Root Cause Analysis across app versions, identifying regression patterns and strengthening test coverage to prevent recurring defects.
- Implemented CTA buttons for membership offer cards, enabling A/B testing that drove higher user engagement.
- Authored unit tests with XCTest, improving code reliability and reducing production defects tracked through SonarQube metrics.
- Collaborated cross-functionally with product managers, designers, and backend engineers to translate business requirements into scalable native iOS solutions, shortening feature delivery timelines.
- Produced technical documentation and architectural diagrams, streamlining onboarding for new developers and supporting cross-team alignment.
- Led design and code reviews ensuring adherence to Clean Architecture, MVVM, and secure coding standards, elevating overall code quality.

Software Engineer – iOS | Infosys (Client: Lufthansa Airlines)
Hyderabad, India | <https://www.lufthansa.com> | July 2019 – July 2021

Infosys is a global leader in consulting and IT services. At Lufthansa Airlines, contributed to building passenger-facing apps supporting global travelers.

- Developed airline booking, check-in, and passenger service features using Swift, UIKit, and Core Data, deployed via App Store and enterprise MDM.
- Implemented MVVM architecture and modularized components to improve maintainability and scalability.
- Balanced and delivered multiple geographically distributed QA projects with strict deadlines.

- Coordinated concurrent releases across distributed Agile teams with proper test coverage.
 - Enhanced test automation frameworks with modular and reusable components.
 - Integrated RESTful APIs and third-party SDKs for payments, social login, and analytics.
 - Applied unit and UI testing (XCTest, XCUITest) to reduce production issues and improve reliability.
 - Improved app startup time through profiling and memory optimization.
 - Delivered new features in Agile/Scrum cycles, collaborating with product managers, QA teams, and Lufthansa airline operations.
 - Built features for real-time flight status tracking, push notifications, and mobile boarding passes to enhance passenger experience.
 - Executed automated test scripts across multiple devices and OS versions.
 - Validated test automation results and provided detailed execution reports.
 - Integrated automation test execution within CI/CD pipelines to ensure continuous quality.
 - Designed end-to-end automated regression test suites for critical workflows.
 - Applied knowledge of mobile development on iOS to validate app functionality on iPhones and iPads.
-

Education

Bachelor of Computer Science – JNTU Hyderabad, India (October 2010 - Apr 2014)

Master of Computer & Information Sciences – Texas A&M University, Commerce (Aug 2021 - May 2023)
