

SAI BHARGAV MADDIREDDY

Java Full Stack developer

TX, USA | 806-401-3557 | sbhargav.mr@gmail.com | [linkedin](#)

SUMMARY

Java Full Stack Developer with 5+ years of experience architecting and delivering enterprise applications. Designed and integrated React.js front-ends with Java backends, enhancing user experience and driving adoption. Streamlined deployment pipelines and automated code generation, accelerating feature delivery by 30%. Optimized complex SQL and Hibernate queries, cutting report generation time from 12 seconds to 2.5 seconds. Certified AWS Developer and Spring Professional with proven expertise in microservices, cloud platforms, and real-time data processing.

TECHNICAL SKILLS

Programming Language	Java (Core Java, Java 8/11/17), SQL, PL/SQL
Java/J2EE Technologies	Servlets, JSP, EJB, JSTL, JDBC, JNDI, JMS, JAX-RS, JAX-WS, JPA, JUnit, Mockito, AWT
Front-End Technologies	HTML5, CSS3, JavaScript, TypeScript, jQuery, Bootstrap, AJAX, XML, JSON, React.js, Router, Redux
Back-End Frameworks	Spring (Boot, Batch, MVC, IOC, ORM, JDBC, JMS, AOP, Security, Cloud), Hibernate, Struts
Databases	Oracle, MySQL, MS SQL Server, PostgreSQL, DB2, MongoDB, Cassandra
-Web Services	REST, SOAP
Cloud Platforms	AWS (EC2, S3, RDS, DynamoDB, SNS, SQS, Lambda), Azure
Version Control & Containerization	Git, Bitbucket, SVN, Docker, Kubernetes
Build and CI/CD Tools	Jenkins, Git, Bitbucket, Maven, ANT, Gradle
Application/Web Servers	Apache Tomcat, JBoss, WebSphere, WebLogic
Security	Spring Security, OAuth, JWT
Testing Frameworks	JUnit, Mockito, Selenium, Postman, SOAP UI
Methodologies	Agile (Scrum, Kanban), Waterfall, TDD, SDLC

EXPERIENCE

McKinsey & Company

Java Full Stack developer

TX, USA

June 2025 – Current

- Architected and developed a scalable microservices based application using Spring Boot and React.js, enhancing system modularity and enabling the parallel work of 4 development teams which accelerated feature delivery by 20%.
- Engineered a real-time data processing module with Java 11 and Kafka, improving data throughput by 15,000 records per second and providing clients with immediate analytical insights.
- Orchestrated the full CI/CD pipeline using Jenkins and Docker, automating deployment processes that reduced manual release efforts by 10 hours per week and minimized deployment errors.
- Led the integration of a new React.js front-end with legacy Java backend services, fostering seamless collaboration with the UX team to deliver 30+ intuitive user interfaces that improved client adoption.
- Optimized complex SQL queries and Hibernate persistence layers, decreasing critical report generation time from 12 seconds to 2.5 seconds and precise enhancing user productivity.
- Pioneered the user interface for a legacy internal tool by implementing React with Redux, improving data visualization and cutting average task completion time by 40% with 100% test coverage.

Texas Tech University

Assistant Software Developer

Texas

June 2024 - May 2025

- Collaborated with faculty and IT staff to design and deploy a secure student information portal using Spring Boot, React.js, and PostgreSQL, streamlining course registration and reducing manual data entry by 60%.
- Integrated legacy campus systems with new REST APIs, enabling seamless communication between departmental applications and improving data consistency across academic units.
- Automated research data workflows by developing reusable microservices and AWS Lambda functions, cutting data processing time for large experiment datasets from hours to minutes.
- Enhanced accessibility and UI performance across institutional web applications by implementing React optimization techniques, improving page load speed by 45% and compliance with WCAG standards.
- Facilitated to agile development practices, assisting in sprint planning, unit testing (JUnit, Mockito), and CI/CD automation through Jenkins, leading to 100% successful deployments during the academic year.

Deloitte Consulting LLP

Java Full Stack developer

India

January 2022 – July 2023

- Spearheaded t Delivered a next-generation financial client portal using Java 17 and Spring Boot, integrating a personalized recommendation engine that increased key feature adoption by 22%. Accelerated feature deployment by 30% through automated code generation and testing, improving time-to-market for client-facing modules.
- Automated client onboarding by developing a document processing pipeline with Azure Form Recognizer and Java services, reducing manual effort by 90% and enabling processing of 10,000+ documents annually, enhancing operational efficiency.
- Modernized a legacy Struts application to a cloud-native React/TypeScript and Spring Boot architecture, increasing front-end performance by 60% and establishing standardized best practices for UI development.
- Developed Java microservices and data pipelines to operationalize a predictive model for regulatory reporting, enabling proactive identification of \$50M+ in potential compliance exposure and delivering insights 40% faster to stakeholders.
- Designed a real-time compliance chatbot with Java/Spring to provide instant, auditable answers from complex regulatory documents, improving consultant response time and decision-making efficiency.
- Improved code quality and efficiency by implementing comprehensive test suites, raising coverage from 60% to 95% and eliminating 120+ hours of QA rework per release, ensuring reliable performance of all critical services.

Cognizant Technology Solutions

India

Java Full Stack Developer

June 2019 – December 2021

- Streamlined a legacy tool with React and Redux, cutting task completion time by 40% and improving developer experience by 15% through simplified code maintenance.
- Spearheaded the UI transformation of a legacy system by integrating React with Redux, accelerating the average task completion rate by 40%, with findings presented to fix the three biggest causes of confusion.
- Resolved a critical performance bottleneck in the Hibernate ORM layer, optimizing database interactions and decreasing API response latency by 400 milliseconds for high-traffic endpoints.
- Established a robust logging and monitoring framework using Log4J and Splunk, enabling drives issue detection and reducing mean time to resolution (MTTR) for production incidents by 5 hours.
- Automated the regression testing suite for a flagship product using Selenium and JUnit, executing 500+ test cases per build and freeing up 8 hours of manual QA effort each week.
- Directed the seamless integration with a third-party SOAP web service, navigating complex data mappings to exactly process over 50,000 transactions in the first month post-launch.
- Constructed a multifaceted reporting feature using JSP, Servlets, and jQuery, fostering clear communication with stakeholders to deliver 12 custom report templates that met all client requirements.

EDUCATION

Texas Tech University – Master of Science in Computer Science (August 2023 – May 2025)

CERTIFICATIONS

AWS Certified Developer

Spring Professional Certification

PROJECTS

Cloud-Based Real-Time Analytics Dashboard

- Built microservices architecture with Spring Boot, enabling independent scaling and faster feature releases.
- Implemented real-time data ingestion using Kafka and AWS Lambda, processing 15,000+ records per second.
- Designed focused, interactive front-end dashboards in React.js with Redux for state management.
- Leveraged AWS services (EC2, S3, RDS, DynamoDB) for hosting, storage, and database management, achieving 99.95% uptime.
- Integrated Spring Security and JWT for secure multi-role access.
- Cut report generation time by 80% via implementing a serverless architecture with AWS Lambda, slashing associated operational costs by 20% and improving stakeholder decisions.

Smart Restaurant Finder - (React, Three.js, OpenAI API, TypeScript, Redux Toolkit, Tailwind CSS)

- Built a mobile-friendly AI-driven React app using OpenAI API for restaurant recommendations, with intelligent search and autocomplete.
- Boosted user relevance matching by 60% using Redux Toolkit for state management and responsive UI with Tailwind CSS.
- Recommendation Focused - GPT - (React, Three.js, GPT-3.5, TMDB API, LLM, React Router, TypeScript)
- Developed a chat-powered movie recommendation app using React, GPT-3.5, and TMDB API, enabling dynamic, AI-driven conversations.
- Implemented predictive suggestions, React Router navigation, and TypeScript-based UI enhancements for a seamless user experience.
- Designed a scalable architecture to efficiently process large-context language models by dividing input sequences into manageable blocks for parallel processing.
