

# SAI DATTA KUMAR REDDY PANTHULA

Location: TX | Phone: 940-843-7223 | Email: [saidattakumarreddypanthula25@outlook.com](mailto:saidattakumarreddypanthula25@outlook.com)

## SUMMARY

**Data Analyst** with over **4 years of experience** delivering **end-to-end data solutions** across **marketing, financial, and pharmaceutical domains**. Proficient in building **ETL pipelines**, designing **analytical datasets**, and developing **interactive BI dashboards** to enable rapid, data-driven decision-making. Skilled in **SQL, Python, SAS, SAP, and cloud-based SaaS data platforms (Snowflake, BigQuery, Azure Data Lake)** for high-volume data processing, with proven success in **transaction monitoring, anomaly detection, and fraud prevention**. Adept at collaborating with cross-functional teams, implementing **data governance**, and aligning **analytics capabilities** with business objectives for measurable impact.

## PROFESSIONAL EXPERIENCE

### EPSILON

USA

#### Data Analyst

Aug 2025 – Present

- Designed and maintained **Snowflake** and **BigQuery** analytical datasets to support marketing performance analysis on **50M+ consumer behavior records**, enabling segmentation queries to be completed in under **5 minutes**.
- Developed **dbt** and **Apache Airflow** workflows to refresh and transform multi-source marketing data, reducing manual reporting preparation by **30+ hours/month** and ensuring consistent data availability.
- Created interactive **Tableau, Power BI, and MS Excel** dashboards with **row-level security**, providing real-time campaign insights to **5 regional teams** and improving decision-making speed for marketing managers.
- Applied **Python (PySpark)** and **SQL** in **Databricks** to clean, standardize, and validate streaming data from **Apache Kafka**, reducing data quality issues by **12,000+ malformed events/month**.
- Led the migration of historical campaign datasets from **AWS S3** to **Snowflake**, optimizing analytical storage by removing **~500GB** of redundant or outdated files.
- Collaborated with marketing analytics teams to incorporate attribution model outputs into **Tableau**, influencing budget allocation strategies for **\$25M+ in annual advertising spend**.
- Facilitated cross-department KPI alignment workshops, leveraging **Agile** methodology, resulting in **40+ new active dashboard users** within the first month of rollout.
- Presented quarterly **Tableau** and **Power BI** reporting enhancements to senior leadership, aligning analytics capabilities with the company's BI modernization roadmap.

### NTT DATA

INDIA

#### Information System Analyst

May 2021 – July 2023

- Architected end-to-end **SSIS ETL** workflows to consolidate data from **12+ financial and operational systems** into **SQL Server**, accelerating month-end reporting cycles by **3 business days** through streamlined data integration.
- Engineered **Python** pipelines integrated with **AML platforms** to analyze **250K+ daily financial transactions**, detecting suspicious patterns in real time and initiating alerts that averted **\$1.2M+** in potentially fraudulent activity.
- Designed and deployed enterprise-grade **Tableau** dashboards for finance, operations, and compliance teams, enabling drill-down analytics on **5 regional datasets** and reducing manual consolidation time by **20+ hours/month**.
- Developed robust **data cleaning** processes in **Python** to validate and normalize pre-load datasets, eliminating anomalies in **250K+ transactions/day** and resolving **700+ reconciliation discrepancies annually**.
- Partnered with finance and compliance stakeholders to define business and technical data rules for regulatory and financial datasets, implementing enterprise data governance controls (**data quality checks, lineage, reconciliations**) that improved audit readiness and ensured trustworthy data pipelines for downstream reporting and regulatory submissions.
- Used **SAS (Base SAS, PROC SQL)** to analyze and validate large volumes of financial and AML transaction data, supporting compliance and regulatory reporting.
- Performed **data profiling and statistical checks in SAS** to identify anomalies, trends, and data quality issues before loading data into **SQL Server** and **Azure Data Lake**.
- Designed and implemented logical and physical data models for finance and **compliance datasets, translating business** requirements into canonical enterprise schemas within **SQL Server and Azure Data Lake**, enabling standardized reporting, rule-based calculations, and scalable onboarding of new regulatory data sources.
- Orchestrated large-scale **data migration** from on-premises **SQL Server** and **Oracle** systems to **Azure Data Lake**, transferring **2TB+** of historical data with zero loss and full audit traceability.
- Worked with **SaaS-based analytics and reporting platforms** to access, analyze, and deliver finance and compliance insights, supporting scalable and secure data consumption across teams.
- Modeled and optimized **SQL Server** warehouse schemas using indexing strategies and partitioning, improving execution times by **40–50 seconds** on high-volume reconciliation queries.
- Collaborated with BI teams to redesign **Tableau** dashboards, implementing parameter controls, calculated fields, and optimized extracts, cutting refresh times from **4 hours to 45 minutes** and improving stakeholder adoption.
- Integrated **Azure DevOps** into **ETL** and dashboard release pipelines, establishing **CI/CD** workflows that reduced deployment errors by **7 incidents/year** and enhanced delivery reliability for business-critical reports.

CIPLA

Information System Analyst

- Engineered **SQL Server** queries and stored procedures to cleanse and structure **1.2M+ pharmaceutical batch records**, enabling regulatory compliance checks within **48 hours** and improving audit readiness.
- Designed interactive **Tableau** dashboards visualizing QA pass rates, defect trends, and production throughput, accelerating plant manager decision-making by **3 hours per batch cycle**.
- Developed **Python** automation scripts to clean sensor and lab datasets, removing **18,000+ duplicate or inconsistent records** across **6 manufacturing facilities**.
- Utilized **SAP ECC/SAP MM&PP** modules to extract production, batch, and material master data, supporting end-to-end pharmaceutical manufacturing and quality reporting.
- Developed SQL server queries and SAP data extracts to cleanse and structure 1.2M+ batch and inspection records, improving regulatory compliance checks and adult readiness.
- Integrated SAP procurement and inventory data with SQL server to enable accurate raw material availability, batch traceability, and vendor performance analysis.
- Migrated historical manufacturing datasets from **Excel** and legacy ERP export into centralized **SQL Server** warehouses, creating a single source of truth for compliance, QA, and operations teams.
- Leveraged **SaaS reporting and data management tools** to share production, quality, and compliance metrics with cross-functional teams, improving accessibility and consistency of operational insights.
- Consolidated procurement and supply chain metrics into **Power BI** reports, reducing raw material shortage resolution time by **12 days annually** and improving cross-department visibility.
- Coordinated with QA, supply chain, and regulatory teams to standardize KPI definitions, ensuring reporting accuracy and alignment across departments.
- Led **Tableau** training workshops for **8 analysts**, standardizing visualization templates, filters, and reporting practices for operational metrics.
- Authored SOPs and **data governance** documentation, supporting **GMP** and **ISO** compliance during regulatory inspections and internal audits.

PROJECTS

Crime Pattern Forecasting and Hotspot Detection

- Performed comprehensive spatial-temporal crime analysis on **1M+ records** from the Los Angeles crime database using **Python (Pandas, NumPy)**, **SQL**, and **ArcGIS/QGIS** for geospatial data handling.
- Applied **geospatial clustering** techniques (**DBSCAN, K-Means**) and **time-series forecasting** models (**ARIMA, Prophet**) to identify high-risk areas and predict crime patterns across time intervals.
- Conducted statistical analysis and **data wrangling** to detect trends in crime occurrence by time, location, and type, supporting evidence-based policing strategies.

Statistical Analysis of Hotel Booking Trends

- Analyzed **three years** of hotel reservation data using **Python (Pandas, NumPy, Matplotlib, Seaborn)** and **SQL** to uncover booking patterns, customer behaviors, and seasonal trends.
- Built **predictive models** in **Scikit-learn** to identify key drivers of booking cancellations, including lead times, room preferences, and customer type, improving forecast accuracy for cancellations.

- Conducted **data visualization** in **Tableau** and **Power BI** to present findings on booking patterns, guest demographics, and high-demand periods, aiding strategic planning.
