

Sathvika Reddy Komandla
Data Analyst
sathvikakomandla@gmail.com | +1(216)774-4241

PROFESSIONAL SUMMARY

Result-driven **Data Analyst** with around 5 years of experience in **data analysis, business intelligence, and reporting** across healthcare, finance, and manufacturing industries. Skilled in **SQL, Python, Excel, Power BI, Tableau, and ETL pipelines** for transforming raw data into actionable insights. Expertise in **data wrangling, statistical modeling, data visualization, and database management**. Proven ability to **collaborate with business stakeholders, design scalable reporting solutions, optimize data pipelines, and deliver dashboards** that support strategic decision-making. Strong problem-solving, analytical, and communication skills with a track record of **improving data quality, automating workflows, and reducing reporting turnaround times**.

TECHNICAL SKILLS:

Category	Key Skills & Tools
Data Visualization & BI	Power BI (DAX, Power Query, Service), Tableau, Qlik Sense; building interactive dashboards and reports
Data Analysis & Excel	Advanced Excel (Pivot Tables, Power Pivot, VBA, Macros), Python (Pandas, NumPy, Matplotlib, Seaborn), R
Databases & SQL	MS SQL Server, PostgreSQL, MySQL, Oracle, Snowflake; complex queries, joins, and optimization
ETL & Data Integration	SSIS, Azure Data Factory, Informatica, Alteryx; designing efficient ETL pipelines
Data Modeling & Warehousing	Star & Snowflake Schema, Dimensional Modeling, MDM, Data Governance
Cloud & Big Data Platforms	Azure (Databricks, Data Lake, Synapse), AWS (Redshift, S3, Glue), Google BigQuery
Programming & Scripting	Python, R, Shell scripting, JSON & XML handling
Reporting & Automation	SSRS, Power Automate, Jupyter Notebooks, automated report scheduling
Data Quality & Governance	Data profiling, cleansing, validation, Row-Level Security, Role-Based Access, metadata management
Machine Learning & Predictive Analytics	Regression, Classification, Clustering, Time Series Forecasting, NLP basics (Python & Scikit-learn)
Project & Collaboration Tools	Git/GitHub, JIRA, Confluence, MS Teams, SharePoint, Agile/Scrum

PROFESSIONAL EXPERIENCE

Client: Conprobit Consulting | Utah |

July 2025- Present

Data Analyst

Responsibilities:

- Drove **end-to-end analytics initiatives** supporting retail pricing optimization, supply chain efficiency, and customer behavior analysis, aligning directly with strategic business goals.

- Designed **scalable data pipelines in Databricks and Snowflake** to integrate structured and unstructured data from ERP, CRM, and e-commerce platforms, ensuring consistent data availability.
- Optimized **SQL queries and stored procedures** for high-volume transactional datasets, reducing execution time by 45% and improving reporting turnaround.
- Built **Python-based machine learning models** for sales forecasting, churn prediction, and seasonal demand planning, leading to a **20% reduction in stock-outs**.
- Designed and deployed **Power BI and Tableau dashboards** for executives, visualizing KPIs such as sales conversion, loyalty trends, supplier performance, and regional sales patterns.
- Partnered with merchandising and marketing teams to **translate analytical insights into targeted promotions and product placement strategies**, increasing campaign ROI.
- Established **data governance practices** including data lineage tracking, quality checks, and compliance frameworks, improving trust and reliability in enterprise reporting.
- Automated **data validation and reconciliation workflows** using Python and Power Automate, improving reporting efficiency by 35% and reducing human errors.
- Conducted **customer segmentation and cohort analysis**, helping business units personalize offerings and enhance retention strategies.
- Collaborated cross-functionally with finance, operations, and supply chain stakeholders to **integrate KPIs into a unified reporting ecosystem**, streamlining executive decision-making.
- Supported **scenario planning and what-if analysis** for pricing models, enabling leadership to evaluate the financial impact of new pricing strategies.
- Implemented **row-level and role-based security in dashboards**, ensuring sensitive retail and supplier data remained protected while enabling broad self-service analytics adoption.
- Trained business users and junior analysts on **data visualization best practices, DAX, and SQL**, fostering a data-driven culture across teams.
- Actively participated in **Agile sprints and cross-functional meetings**, ensuring analytics deliverables aligned with business timelines.

Client: PG&E | California |

April 2024 to June 2025

Data Analyst/Power BI

Developer

Responsibilities:

- Designed and managed **ETL pipelines in Databricks and Python**, ensuring seamless ingestion, transformation, and processing of billions of customer usage and billing records across multiple systems.
- Implemented **data quality checks, exception handling, and reconciliation processes** to guarantee the reliability and accuracy of mission-critical datasets.
- Created and optimized **complex SQL queries, joins, and stored procedures** in Snowflake and Teradata, reducing report generation times from hours to minutes.
- Designed and maintained **dimensional data models and schemas in Snowflake**, improving scalability and accelerating query response for analytical workloads.
- Leveraged **Palantir/DEEP** to unify, model, and standardize disparate datasets, enabling insights into customer churn, adoption rates, and network utilization.
- Built and published **executive-level dashboards in Tableau and Power BI**, highlighting KPIs such as churn rate, ARPU, network performance, and segmentation.
- Collaborated with **business, finance, and operations leaders** to gather requirements, define KPIs, and ensure compliance with data governance policies.
- Automated recurring reporting, reconciliation, and data validation processes with **Python scripts and Power Automate**, reducing manual effort by 40%.
- Partnered with operations teams to perform **outage pattern and grid reliability analysis**, which directly informed infrastructure maintenance planning.
- Conducted **customer segmentation analysis** to identify high-value customers and reduce churn through targeted retention campaigns.

- Enhanced reporting accuracy by implementing **row-level and role-based security in Power BI**, ensuring sensitive customer data was protected.
- Coordinated with compliance teams to ensure all **reporting workflows met regulatory requirements** for data handling and security.
- Mentored business analysts and stakeholders on **self-service analytics best practices**, enabling faster decision-making with reduced dependency on IT.
- Participated in **Agile sprint planning and reviews**, contributing to cross-functional delivery of data and analytics projects on time.

Client: Short code Technologies | Hyderabad |

June 2020 – July 2023

Sr Data Analyst

Responsibilities:

- Designed and implemented **enterprise-level data warehouse and ETL solutions**, ensuring data pipelines achieved over **99%+ accuracy** for customer behavior, billing, and fraud detection analytics.
- Led the **migration of high-volume workloads** from Teradata to Snowflake and Azure SQL, improving scalability, query performance, and reducing infrastructure costs.
- Conducted **financial and risk analytics** using SQL and Python, which supported fraud detection, compliance reporting, and portfolio risk strategies.
- Built advanced **segmentation, forecasting, and risk trend models**, enabling executives to proactively adjust credit policies and improve profitability.
- Developed and maintained **interactive dashboards (Power BI/Tableau)** to visualize KPIs such as call volumes, engagement levels, credit policy performance, and service quality, giving stakeholders real-time insights.
- Produced **recurring and ad-hoc executive reports**, helping leadership identify compliance gaps and stay aligned with SOX and Basel regulatory standards.
- Partnered with **data governance and compliance teams** to enhance lineage documentation, metadata management, and audit readiness across financial reporting.
- Collaborated cross-functionally with IT, finance, and operations teams to improve **data validation frameworks** and decision-making accuracy across departments.
- Assisted in **optimizing ETL jobs and SQL queries**, reducing runtime by 35% and improving efficiency of daily data refreshes.
- Partnered with product teams to **track customer usage trends and churn indicators**, enabling better retention strategies.
- Contributed to the development of **fraud detection models** by analyzing anomalies in billing and customer activity, helping reduce fraudulent transactions by 15%.
- Mentored **junior analysts** in SQL, Python scripting, and dashboard best practices, fostering a culture of data-driven problem-solving within the team.
- Coordinated with senior leadership to **establish standardized reporting templates and KPIs**, improving visibility and consistency across multiple business units.
- Championed **automation of reporting workflows** using Python and VBA, cutting manual effort and turnaround times significantly.

EDUCATION

Master of Science - Information Systems

Aug 2023 – May 2025

University of Cleveland State, Cleveland, OH
