

Soundarya Dash

Masters in Computer Science, Temple University, Philadelphia, PA
+1 (267) 817 0399 dashsoundarya12@gmail.com linkedin.com/in/soundarya-dash

PROFESSIONAL SUMMARY

Highly motivated and results-oriented full stack software engineer with approximately 6 years of experience designing, developing, and deploying scalable web applications across financial services, legal tech, and health-care domains. Strong backend expertise in Java, Python, and Node.js, with deep experience in microservices, cloud-native architectures on AWS, and CI/CD automation. Currently pursuing a Masters in Computer Science at Temple University with growing focus on applied machine learning and interpretable models.

TECHNICAL SKILLS

Programming & Backend: Java (Spring Boot, Hibernate), Python, JavaScript/TypeScript, Node.js, Express.js.

Frontend: React.js, Angular, HTML5, CSS3, Redux, Material-UI, Bootstrap.

Databases & Messaging: MySQL, MongoDB, Redis, Kafka.

Cloud & DevOps: AWS (Lambda, EC2, S3, CloudWatch, CloudFormation, API Gateway, ECS, EKS), Docker, Kubernetes, Terraform, CI/CD with Jenkins, Harness, Spinnaker.

Testing & Tools: Jest, Cypress, JUnit, Mockito, Pytest, Spock, Git, JIRA, Confluence, Postman, Swagger.

AI/ML: LangGraph, LangChain, LLMs, AWS Textract, NumPy, Pandas, Matplotlib, Seaborn, PyTorch; experience with ML classification, feature engineering, and SHAP-based interpretability.

EDUCATION

Temple University, Philadelphia, PA Aug 2025 – May 2027 (Expected)
Masters in Computer Science.

SMRIST Chennai July 2015 – May 2019
Bachelor of Technology in Computer Science Engineering, GPA: 9.28/10.

PROFESSIONAL EXPERIENCE

JP Morgan Chase & Co., Bengaluru, India Oct 2022 – Aug 2025
Software Engineer III

- Spearheaded development of a microservices-based Sales Experience Platform and micro-frontend architecture for complex financial workflows used by bankers.
- Implemented and deployed an LLM-based incident automation system using LangGraph, reducing manual effort for incident creation by approximately 70%.
- Designed and maintained AWS cloud infrastructure with Terraform, managing resources worth over \$1M annually and improving reliability and scalability.
- Orchestrated containerized applications using Docker and Kubernetes, optimizing deployment and runtime efficiency.
- Led CI/CD implementation using Harness, Spinnaker, and Jenkins, cutting deployment time by around 40% for critical services.

Thomson Reuters, Bengaluru, India May 2021 – Oct 2022
Software Engineer II

- Led development of a Human-in-the-Loop legal document processing system that combined OCR and workflow automation for high-volume legal documents.
- Architected and implemented an OCR solution using AWS Textract and FineReader, processing 10,000+ documents per day with high extraction accuracy.
- Built serverless workloads with AWS Lambda, Step Functions, API Gateway, CloudWatch, CloudFormation, and S3 to support scalable document pipelines.
- Implemented Python- and Spring Boot-based automation workflows that reduced manual processing time by roughly 60%.

Jio Platforms Ltd., Navi Mumbai, India Aug 2019 – May 2021

Software Developer

- Developed multiple enterprise-scale applications using MEAN/MERN stacks with Angular and React for internal and external users.
- Built a full-stack Electronic Medical Records (EMR) system serving 100,000+ users with real-time updates using Kafka, MongoDB, Redis, and Socket.io.
- Improved application load time by about 40% through front-end and API performance optimizations.
- Contributed to R-Contract, a contract management platform, implementing features such as contract templates, e-signatures, and document storage using Angular, Node.js, and Bootstrap.

MACHINE LEARNING PROJECT

Early Warning System for Social Media Addiction Risk in Students

Fall 2025

Temple University – Machine Learning Course Project

- Built a binary classification system to identify students at risk of developing social media addiction using the “Social Media Addiction Among Students” dataset from Kaggle.
- Engineered domain-specific features such as `Usage_to_Sleep_Ratio`, `Mental_Health_Risk_Index`, and `Conflict_Score` to better capture behavioral risk signals beyond raw usage hours.
- Defined a robust target variable (`Target_At_Risk`) that combined high or moderate addiction scores with warning signs like high usage-to-sleep ratio and frequent conflicts, emphasizing early-stage risk.
- Trained and evaluated Logistic Regression and Random Forest models using an 80/20 train-test split; Random Forest achieved approximately 99% accuracy on the test set.
- Applied SHAP analysis to interpret model predictions, confirming that high usage-to-sleep ratio, reduced sleep hours, and high average daily usage were the most influential early warning indicators.
- Analyzed platform-specific risk, identifying WhatsApp, TikTok, and Snapchat as associated with higher at-risk percentages, while YouTube and LinkedIn showed lower risk profiles.

SELECTED INDUSTRY PROJECTS

Sales Experience Platform – JP Morgan Chase & Co.

- Architected and developed a microservices-based financial platform handling over \$10M in daily transactions while reducing system latency by about 50% through optimization.
- Implemented an LLM-based incident automation system with around 90% accuracy, significantly reducing manual intervention in incident workflows.
- Tech stack: Java, Spring Boot, React, AWS, Kubernetes, LangGraph.

HITL Legal Document Processing System – Thomson Reuters

- Built an AI-powered legal document processing pipeline that processed 10,000+ documents daily with approximately 95% OCR accuracy.
- Tech stack: Python, AWS Textract, Spring Boot, MySQL.

Healthcare EMR System – Jio Platforms Ltd.

- Developed a full-stack EMR system supporting 100,000+ users with real-time updates via Kafka, MongoDB, Redis, and Socket.io.
- Improved data retrieval speed by roughly 40% through backend and database tuning.

CERTIFICATIONS

AWS Solutions Architect Associate, 2024.

HashiCorp Terraform Associate, 2024.

AWARDS

Circle of Excellence Award, JP Morgan Chase & Co., 2023 – for designing and implementing a robust Client Data Model integrating Salesforce with downstream systems using AWS Kinesis, EventBridge, and related services.

Hackathon, JP Morgan Chase & Co., 2024 – developed a centralized task management solution integrating Outlook, Teams, and OneNote with AI/ML-based task prioritization.

VOLUNTEERING

Supported JP Morgan Chase GoodWorks initiative, helping package and prepare 200+ grocery items for distribution to local NGOs.

Volunteered at JP Morgan Chase PowerUp tech event, contributing to successful event execution.

PUBLICATION

Sentimental Analysis Using GSM Technologies, IJARIE, 2018 – developed a remote patient monitoring system using GSM technology for continuous vital sign monitoring and automated SMS alerts for threshold breaches.

LANGUAGES

English (Professional proficiency), Hindi (Professional proficiency).
