

SREENATH GUNAGANTI

Full Stack Java Developer

Denton, TX, USA — 9723182364 — gunagantisreenath@gmail.com

PROFESSIONAL SUMMARY

Full Stack Java Developer with **4+ years of experience** designing, building, and supporting production-ready backend services and web applications using Java, Spring Boot, REST APIs, and React. Experienced in developing scalable APIs, integrating Kafka-based event processing, and working with SQL databases and AWS cloud services. Proven ability to collaborate in Agile teams, contribute to CI/CD-driven deployments, and improve system reliability and performance through clean code, validation, and efficient data handling.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript

Backend: Spring Boot, REST APIs, Microservices, JPA/Hibernate, Request Validation, Exception Handling

Frontend: React, HTML5, CSS3, Responsive UI, API Integration

Databases & Caching: MySQL, PostgreSQL, MongoDB, Redis

Messaging: Kafka, Event-Driven Processing

Testing: JUnit, Mockito, Unit Testing, Integration Testing

Cloud & DevOps: AWS (EC2, RDS, S3, CloudWatch), Git, Jenkins, Docker

Concepts: OOP, API Design, Pagination, Caching, CI/CD, Agile Development

PROFESSIONAL EXPERIENCE

Software Engineer — IBM — Armonk, NY, USA

Jan 2024 – Present

Enterprise IT Services Project

- Contributed to Spring Boot backend services and RESTful APIs for enterprise platforms and data-driven web applications.
- Implemented API features including request/response models, pagination, filtering, and sorting to support scalable UI workflows.
- Integrated Kafka-based asynchronous processing to decouple background workflows and improve system responsiveness.
- Added centralized exception handling and input validation, reducing recurring API errors and improving response consistency.
- Supported performance improvements through query tuning and selective caching, contributing to faster response times for frequently used endpoints.
- Built and updated React-based UI components to consume backend APIs, improving data visibility and usability for internal users.
- Supported AWS deployments (EC2, RDS, S3, CloudWatch) by monitoring logs and metrics and assisting in production troubleshooting.

Financial Services & FinTech Platform Project

- Contributed to Spring Boot microservices used for financial data processing and reporting workflows.
- Built and enhanced secure REST APIs with validation, pagination, and standardized responses for dashboard and reporting use cases.
- Implemented Kafka event-driven processing to handle transaction updates and downstream notifications reliably.

- Assisted with reliability and latency improvements by optimizing database access patterns and caching frequently accessed data.
- Supported CI/CD pipelines using Jenkins and Docker, improving deployment stability and release consistency.
- Participated in production support activities, incident triage, and root-cause analysis with the team.

Java Developer — IntraSoftTech — Pune, India

Jan 2020 – Dec 2021

- Developed Spring Boot backend services and REST APIs for healthcare applications supporting patient records, appointment scheduling, billing workflows, and operational reporting.
- Worked closely with business analysts and QA teams to translate healthcare workflow requirements into backend API functionality.
- Implemented request validation, centralized exception handling, and consistent error responses to improve API reliability.
- Integrated Kafka-based asynchronous processing to support event-driven updates such as appointment changes, notifications, and background data synchronization.
- Built analytics and reporting modules used by operations and management teams, reducing manual reporting effort by approximately 70%.
- Improved database performance using query tuning, indexing strategies, and schema refinements in MySQL.
- Implemented Redis caching for frequently accessed reference data, improving API response times and reducing database load.
- Supported CI/CD pipelines and deployments using Jenkins and Docker; assisted with production debugging, monitoring, and issue resolution.

EDUCATION

Master of Science in Information Technology — University of the Cumberland	2023 – 2024
Master of Science in Data Science — University of North Texas	2022 – 2023
Bachelor of Technology in Electrical and Electronics Engineering — VNR VJIEIT, Hyderabad, India
