PROFESSIONAL SUMMARY

I am **Entry-Level Software Engineer** with 2+ years of experience in developing and supporting data-driven applications using Python and SQL. Experienced in database design, query optimization, data transformation, and building interactive dashboards and KPI reports using Power BI to enable data-driven decision-making. Skilled in report automation, debugging, and delivering scalable solutions. I Completed my **master's in computer science from Texas A&M**, with strong knowledge of SDLC, analytical and problem-solving. Passionate about writing clean, efficient code and delivering impactful software solutions.

SKILLS:

Languages : Python, SQL, Java (Basics), HTML/CSS
Databases : MySQL, PostgreSQL, Query Optimization, Database Design
Data Handling : Data Cleaning, Transformation, Reporting, ETL Basics
Tools : Excel, Power BI, VS Code

EDUCATION:

Master's in computer science

Texas A&M University-Kingsville. Kingsville, Texas, United States.

Graduation: December 2024

Bachelor of Technology in Computer Science

Jawaharlal Nehru Technological University, Hyderabad, Telangana, India.

Graduation: August 2022

PROFESSIONAL EXPERIENCE:

Software Engineer Intern

Pinnacle Arc Llc,

April 2025 – Present

Las Vegas, United States.

- Developing and enhancing internal web and data-driven applications using Python, SQL, and modern backend technologies
- Performing data extraction, cleaning, and transformation to support analytics and reporting needs
- Writing optimized SQL queries and automating reports for business stakeholders
- Assisting in dashboard creation and KPI tracking to enable data-driven decision-making
- Collaborating with cross-functional teams in Agile environment to troubleshoot issues and deliver scalable solutions

Software Engineer

E-Systems Techno Pvt Ltd.,

September 2022 – March 2023

Hyderabad, India.

- Developed and maintained web-based applications using SQL, Python, and backend scripting to improve system efficiency and reliability
- Designed and optimized database queries, improving data retrieval performance by 30%
- Assisted in building reports and dashboards to support business and operational decision-making

- Collaborated with cross-functional teams to gather requirements, debug issues, and deliver scalable solutions
- Automated repetitive processes, reducing manual effort and improving productivity

Software Engineer Intern

E-Systems Techno Pvt Ltd.,

August 2021 – February 2022

Hyderabad, India

- Supported development team in testing, debugging, and enhancing internal applications
- Worked on data cleaning, preprocessing, and validation for analytics tasks
- Assisted in writing SQL queries and generating reports for business analysis
- Participated in code reviews and gained hands-on experience with software development lifecycle (SDLC)
- Contributed to feature enhancements and documentation

EDUCATIONAL PROJECTS:

Driver Drowsiness Detection System.

- Developed an advanced safety system to detect driver fatigue using computer vision and machine learning.
- The project monitored eyelid closure and head movements through facial recognition to provide real time alerts, reducing the risk of accidents caused by drowsiness.
- Tools such as OpenCV, Python, and machine learning algorithms were utilized to enhance road safety.

Student Enrolment System:

- Designed and implemented a database-driven system to manage student enrolment efficiently.
- The project featured automated workflows for student registration, course allocation, and fee management.
- It incorporated a user-friendly interface and ensured data integrity through SQL-based back-end processing.
- This system streamlined operations, reduced manual effort, and enhanced user satisfaction.

Fake Profile Identification In Social Network Using Machine Learning &Nlp

- Developed a system leveraging Machine Learning and Natural Language Processing techniques to classify social media profiles as genuine or fake.
- The project implemented data preprocessing, TF-IDF vectorization, and dimensionality reduction (PCA) to extract features.
- Multiple models, including SVM and Naive Bayes, were trained and evaluated to achieve optimal performance.
- A user-friendly Streamlit interface was deployed for real-time profile classification, enhancing user privacy, reducing misinformation, and fostering trust in social networks.
