

Suchitra Reddy Ambati

Java Full Stack Developer

TX |  8177934163 |  Suchi3260@gmail.com |  <https://www.linkedin.com/in/suchitra-ambati/>

SUMMARY

- Over 4 years of expertise in Java, React.js, Node.js, Angular, Python, and Django, specializing in software design and architecture.
- Proficient in building responsive UIs using HTML, CSS, JavaScript, and frameworks such as Angular, React.js/Redux, and Node.js.
- Skilled in Java 8 features including Lambdas, Streams, and functional interfaces, with extensive database management experience in Oracle, SQL Server, DB2, and MongoDB.
- Experienced in developing MERN stack applications, creating REST APIs with Express.js, Node.js, and MongoDB, and familiar with microservices architecture.
- Strong background in front-end/UI development with HTML5, CSS3, JavaScript, ES6, and jQuery, including asynchronous data handling with TypeScript.
- Hands-on experience in AWS provisioning (EC2, S3, Elastic Beanstalk, RDS, and SQS) and Agile (Scrum) methodologies.
- Proficient in designing and deploying robust architectures for payment gateway integrations, ensuring seamless and secure transactional experiences for users.
- Actively involved in staying updated with emerging technologies and industry trends, continuously enhancing skills and adapting to evolving development practices.

PROFESSIONAL EXPERIENCE

Epsilon, TX

Full Stack Developer

Mar 2024 – Present

- Developed a secure data management module using Python and Django, facilitating seamless integration with external systems through RESTful APIs with JSON data format.
- Enhanced user interaction and data retrieval by implementing dynamic, real-time user interfaces for projects using AJAX, allowing for data updates without full page reloads.
- Deployed applications on Azure, leveraging Kubernetes for container orchestration to ensure high availability, scalability, and automated deployment processes.
- Managed backend database operations using Oracle, ensuring efficient data storage and retrieval. Utilized Postman for API testing and GitHub for version control, promoting collaboration and maintaining code integrity throughout the project lifecycle.

Infosys Limited, Bangalore, India

Software Engineer

Sep 2019 - Dec 2021

- Spearheaded a data migration project for an insurance company, transitioning to Guidewire using Java and Angular technologies. Achieved a 40% reduction in user effort and a 25% acceleration in policy processing time.
- Engineered a robust RESTful API-based application utilizing Spring Boot's MVC framework, leveraging its lightweight container for inversion of control (IoC) to ensure architectural flexibility.
- Streamlined policy quote generation for over 1 million customers by utilizing Java, Hibernate ORM, REST APIs, and Apache Kafka, resulting in an 8% increase in revenue.
- Implemented an advanced policy document retrieval system in Angular 9, cutting retrieval time by 30% and boosting overall user satisfaction by 20%.
- Established user interface guidelines and standards using JavaScript, jQuery, CSS, and HTML, ensuring consistent UI development and maintenance across the website.
- Developed resilient backend logic using Java, SQL, Spring Data JPA, and Hibernate, adapting to updates in Canadian state policies regarding VIN/RIN. Utilized Git for streamlined code management.
- Coordinated communication between UI and REST APIs using React.js for efficient component development, Spring MVC for REST API consumption, and JavaScript, CSS3, and jQuery for a responsive frontend, enhancing data retrieval speed.
- Designed and built the "Insure Connect" customer engagement platform using GraphQL, OAuth 2.0, and Elasticsearch, facilitating smooth data exchange between insurance providers and policyholders.
- Automated EDocs monitoring using JavaScript within ServiceNow, integrating AWS CloudWatch and Lambda functions for real-time monitoring, reducing manual effort by 80%.
- Conducted comprehensive end-to-end testing on the 'Insurance Claim Center' application using the JUnit framework and Mockito, successfully identifying and resolving 30 critical bugs.
- Leveraged expertise as an Incident Management professional with a strong background in Java, ServiceNow, JIRA, Confluence, and Agile methodologies.

Trigent Software, India

Java Developer

Jan 2018 – Aug 2019

- Enhanced application responsiveness by 20% through the development of modules using React, Redux, HTML5, CSS3, Bootstrap, React-Bootstrap, JavaScript, Express.js, and RESTful APIs.

- Designed and implemented robust event tracking solutions utilizing C#/.NET within the existing MERN stack infrastructure, effectively enhancing backend functionalities and system robustness to meet evolving business needs.
- Developed a high-performance single-page application (SPA) using ReactJS and React Hooks for state management, significantly enhancing user engagement and interaction through optimized tagging solutions on JavaScript client-side platforms.
- Improved database performance by 25% in Click Software applications using MongoDB within the MERN stack, employing advanced schema design, indexing, query optimization, and sharding techniques.
- Implemented Stripe API-based payment gateway integration for a Fortune 500 client's advertising campaigns, utilizing GraphQL, webhooks, and the MERN stack. This integration enhanced application security, enabled seamless transaction processing, and resulted in a 30% increase in revenue streams for Epsilon's platform.
- Increased user engagement by 35% through the development of a front-end UI SPA for positive consent onboarding flow using React.js, Material-UI, and React Router.
- Developed an immersive multimedia gallery feature using HTML5 semantics, CSS3 animations, and JavaScript interactivity, allowing users to seamlessly explore visual content and enhancing platform engagement.
- Created a microservice-based RESTful API using the MERN Stack (MongoDB, Express.js, React.js, Node.js), effectively managing and retrieving data with a 40% decrease in API response times.
- Accelerated development cycles with Express.js by designing and deploying a Node.js-based REST API, resulting in a 50% reduction in time-to-market for new features.
- Managed and maintained the CI/CD pipeline using a DevOps toolset, including continuous integration with GitHub and Jenkins.
- Actively participated in Agile software development, collaborating with cross-functional teams and clients across all project phases, including requirements analysis, design, and implementation.

TECHNICAL SKILLS

Programming Languages:	Java, Python, C#, SQL.
Frameworks:	Spring Boot, Node.js, Angular, React.js, Django, Flask, Hibernate, Express.js, Spring Beans, Spring Security, Spring JPA.
Web Technologies:	HTML, JavaScript, JQuery, XML, AJAX, JSON, Bootstrap, Restful API, Redux
Cloud Technologies:	AWS, Azure
Database:	MySQL, SQL Server, PostgreSQL, MongoDB, Oracle, Spark SQL, Cassandra, DynamoDB
Version Tools:	Git, Docker, Kubernetes, JUnit, Mockito
Other Skills:	Jira, Jenkins, Maven, Ansible, Grafana, Stash, Artifactory, Splunk, Postman, Terraform
Methodologies:	Agile, Waterfall, SDLC.
IDEs:	NetBeans, IntelliJ IDEA, Eclipse, VS code
Operating Systems:	Windows, Linux

EDUCATION

University of Texas at Arlington	
Master of Science in Computer and Information Science	Jan 2022 - Dec 2023
Sree Vidyanikethan Engineering College	
Bachelor of Technology in Computer Science and Systems Engineering	Jun 2015 - May 2019

PROJECTS

Expense Tracker | Angular, MySQL, Spring Boot

- Architected an innovative expense management application using Angular and Spring Boot, enhancing user experience in managing expenses. Employed MySQL database for secure data storage and implemented data validation techniques, resulting in a 99.5% error-free performance rate.

Fake Job Detector | Python, Machine learning, SVM & Naïve Bayes algorithm

- Crafted a cutting-edge Fake Job Detector, achieved an accuracy rate of 98% in distinguishing between genuine and fake job listings, safeguarded job seekers from potential scams.

Breast Cancer Diagnosis | K-Nearest Neighbors, SVM (Machine Learning)

- Analyzed Train, Test, and Validation errors to assess model performance in diagnosing breast cancer, comparing SVM and KNN models; played a pivotal role in achieving a remarkable 10% improvement in model reliability for medical diagnosis applications.

Real-Time Object Detection using Power App | Python, Apriori, FP-growth

- Improved a custom business application in Power App for real-time object detection, increased efficiency by 40% by establishing seamless data connectivity and cross-functional platform functionality, promoted in a 50% improvement in user accessibility.

Mining of Frequent Itemset over Large-scale Data | Algorithm Design, OOPS

- Devised an algorithm with length constraints, optimized computation intensity and reduced mining sensitivity by 25% by exhibiting proficiency in object-oriented programming and algorithm design, enhancing productivity by 15%
