Professional Summary

Strategic and innovative Data Reporting and Analytics Consultant with 3+ years accelerating business outcomes through automated, scalable analytics and AI-driven insights. Deep expertise in SAS, SQL, Python, PySpark, Databricks, and Generative AI technologies, delivering transformative solutions in healthcare, finance, telecom, and retail sectors. Proven success translating complex data problems into actionable intelligence for timely, data-informed decision-making.

Professional Experience

Senior Data Reporting & Analytics Consultant

Tata Consulting Services (TCS) | Client: PNC Bank | January 2022 – July 2023

- Spearheaded migration of Supplemental Data Submission from SAS to Databricks for healthcare client, cutting report latency by 40%, enabling near real-time decision insight.
- Developed multi-source ETL pipelines using Python, SQL, PySpark, complemented with Generative AI models to auto-detect, explain, and remediate data anomalies, reducing manual checks by 50%.
- Designed AI-powered Tableau dashboards with natural language narrative generation, providing automated executive briefings, shortening decision cycles by 25%.
- Built predictive churn and risk models combining Databricks MLflow and LLMs for telecom clients, lowering churn by 15%.
- Automated regulatory compliance reporting with NLP-based Generative AI, cutting prep time from days to hours for government clients.
- Deployed AI chatbots linked to SQL warehouses, enabling conversational querying, reducing analyst support by 40%.
- Created synthetic healthcare datasets using generative AI to boost model training without violating privacy.
- Integrated AI-driven anomaly alerts contextualizing logistics data cuts stock-outs by 20%.
- Optimized Spark streaming pipelines, reducing cloud costs by 35% for retail real-time sales updates.
- Built voice-activated AI assistants facilitating executive interaction with BI dashboards for manufacturing clients.
- Led development of multi-modal AI BI platforms combining visuals, text, and voice for enhanced analytics engagement.
- Partnered with cybersecurity teams deploying real-time AI threat detection to safeguard financial data.
- Architected Generative AI root cause analysis tools synthesizing multi-source logs, slashing e-commerce downtime.
- Conducted enterprise AI ethics and compliance programs, ensuring HIPAA and GDPR alignment.
- Orchestrated hybrid AWS-Azure AI platform migration improving scalability and cost efficiency.
- Authored AI governance frameworks and detailed model documentation, ensuring audit readiness.
- Delivered workshops on AI adoption, ethics, and responsible use to analytics teams in healthcare and

insurance.

- Automated data governance workflows with AI, reducing manual compliance workload by 40%.
- Tuned Spark clusters with AI performance monitors processing multi-terabyte data daily.

Tech Stack

SAS, SQL, Python, PySpark, Databricks, Azure Data Lake, AWS, Tableau, Power BI, Apache Airflow, Git, Generative AI (LLMs, NLP, NLG, AI Chatbots), AI Ethics, AI Monitoring Tools

Data Reporting Analyst

Tata Consultancy Services (TCS) | Client: PNC Bank | March 2021 – December 2021

- Automated SAS and SQL reporting workflows enhanced by AI anomaly detection, fast-tracking monthly closes by 30% for Fortune 500 insurance client.
- Improved Oracle and SQL Server telecom client data reconciliation via AI-assisted workflows, boosting data reliability by 20%.
- Applied ML and Generative AI with SAS and R for marketing text analytics, increasing consumer goods client campaign ROI by 10%.
- Developed AI-augmented Tableau dashboards with auto-anomaly detection and explanatory summaries for healthcare operational monitoring.
- Created AI-assisted root cause analysis tools, decreasing retail client reporting issue resolution time by 60%.
- Authored comprehensive technical and audit documentation to support public sector compliance and onboarding.
- Led SAS macro automation, improving ad-hoc reporting accuracy in the energy sector.
- Piloted AI sentiment analysis on customer feedback, refining retail marketing strategies.
- Implemented BI upgrades to Tableau and Power BI, incorporating AI features for insurance and retail clients.
- Trained analysts and stakeholders on AI/ML applications, improving reporting workflows.
- Developed AI-powered forecasting and utilization models optimizing utility client cost and demand balance.
- Established ML governance ensuring fairness, transparency, and compliance in finance and healthcare client models.
- Facilitated AI literacy, safety, and ethical use workshops for clients adopting generative AI technologies.
- Streamlined data classification using AI for enhanced report discovery in utilities.
- Designed machine learning trend detection approaches, accelerating opportunity identification for consumer goods.

Tech Stack

SAS, SQL, R, Oracle, SQL Server, SAP ERP, Tableau, Power BI, Git, AI & ML Frameworks (Regression, Clustering, NLP, Sentiment Analysis, Generative AI)

Education

Masters in Industrial Engineering GPA 3.4

Western New England University | 2025

Bachelor of Technology GPA:7.2

KL University, India | 2021

Certifications

- Databricks Certified Data Engineer
- SAS Certified Advanced Programmer
- Project Management Professional (PMP)
- Certified Business Intelligence Professional (CBIP)
