QA Automation Test Engineer / SDET (Software Development Engineer in Test)

Automation Testing | Selenium | Java | Appium | Rest assured | API | Python Performance Testing | Driving Quality Excellence | AI ML | Data Science Projects Testing | Prompt Engineering Tester | Cloud Testing

QA Automation Engineer with 4+ years of Professional history includes 4+ years of experience in IT as QA Senior Automation Engineer in Application Automation Testing , QA Testing large E-Commerce, banking, Healthcare Informatics Skilled in Scrum, Test Cases, Agile Methodologies, Test Automation, and MTM, Software Test Life Cycle (STLC)

Dedicated to improving software reliability and efficiency Skilled in Automation Selenium, System Integration Testing, JMeter, Rest API, GitHub, Jenkins, Agile and DevOps Methodology with a Strong hold on Java and Python, Selenium (Web Automation Testing), Appium (Mobile Automation Testing), ZAP(Security Testing), Active contributor to open-source testing frameworks.

Domains Finance, Banking, Investment, Health care/Insurance, Supply Chain Domains

Professional Summary:

- **Software Development Engineer** in Test with rich experience in Software Quality Assurance (Automated and Manual) of Web based, Client – Server, Cloud based applications, BDD, API testing, Mobile Testing, UI Testing and Skilled in various testing technologies like JAVA, Selenium, Cloud (AWS), Cucumber, SoapUI, TestNG, DevOps Testing, Protractor and Appium and current QA methodologies.
- Experience in industry-standard methodologies like Software Development Life Cycle (SDLC), Software Test Life Cycle (STLC) using V Model, Waterfall, and Agile Model using SCRUM methodology and developing test automation solutions for Agile/SCRUM and Scaled Agile Methodology.
- Developing and executing manual, automated tests in different platforms using **Java, Selenium, Cypress**
- Experienced in preparing **Test Plans, Test Cases, and Test Scripts**, Test Case Execution, analyzing the results of scripts, interaction with developers in fixing the errors by having Defect Tracking meetings.
- Experience in Databases and **ETL testing** including **SQL, Oracle** and **Teradata** and validating.

Front End: Involved in different phases of testing Smoke testing, Regression testing, Database testing, GUI testing, **User Acceptance Testing (UAT), Integration, Regression, Functional, Front End** , Back End testing.

- Good experience in **Web Services** like **SOAP** and **RESTFUL** in **API Testing** and using with **SOAPUI** tool.
- Designed page object framework UI automation **Maven, TestNG** integration with Jenkins.
- Good experience in writing **SQL** queries using multiple Databases such as **Oracle** and **MS SQL Server**.
- Worked on **WSDL, XSD, Schema, XML** documents for **Web Services** Testing and ability to analyze **JSON** and XML web service response for performing backend testing.

Cloud Dev OPS / Cloud Testing Perform **CI/CD** automation using Team city, **Jenkins's** tool for scheduling jobs and use Jenkins as Continuous Integration server to configure with **Maven/Ant** on AWS Cloud/On premise.

- Created **Docker** images, created repository in enterprise dockyard, created Docker containers using docker images, deployed them on Elastic Container in AWS. Created Docker images for Micro Services.

Mobile /Web Applications Expert in using **Appium** to develop automation testing scripts for **web, Mobile** client server applications. Functionality testing, API Testing, Install/uninstall Testing, Usability testing, Security , Performance testing.

Manual Testing experience in **Sanity testing, Feature testing, Functional testing, System testing, Compatibility testing, Retesting, Regression Testing, Performance testing, Load testing and stress testing** in mobile handsets and web-based applications.

Data Science / Role Prompting: Skilled QA of Advanced **Regression Modelling, Correlation, Multivariate Analysis, Model Building**, Business **Intelligence tools** and **application** of Statistical, Chain of Thought (CoT) Concepts.

- Developed predictive models using **Decision Tree, Naive Bayes, Logistic Regression, Random Forest, Social Network Analysis, Cluster Analysis**, and **Neural Networks**.

Azure cloud proficiency in a variety of tools and technologies relevant to QA , data engineering in Azure cloud environments. Azure Databricks for building and optimizing data pipelines, as well as experience with Azure Synapse Analytics for data warehousing and analytics.

AWS services like AWS EMR, Redshift, S3, EC2, configuring the servers.

- Design and Develop **ETL** Processes in **AWS Glue** to migrate Campaign data from external sources like **S3**, ORC/Parquet/Text Files into **AWS Redshift**.
- Writing Scala Applications which runs on Amazon **EMR** cluster that fetches data from the Amazon S3 location and queues it in the **Amazon SQS** (simple Queue Services) queue.

ETL working with **ETL methods** for data extraction, transformation, and loading in corporate-wide ETL Solutions and Data Warehouse tools for reporting and data analysis. Import Data into Power BI using different ETL methods, SQL Azure, Direct Query, Restful API Generator, build a relational model within **BI**, experience with different ETL tool environments like **SSIS, Informatica**, and reporting tool environments like **SQL Server Reporting Services**, and Business Objects.

SQL Proficient in writing packages, stored procedures, functions, views database triggers using SQL PL/SQL

- complex SQL queries using DML, DDL, Group functions, grouping sets (Cube, Rollup), Grouping functions, Analytical functions, hierarchical queries, Partition by clause

Data Governance: Testing of data governance and security measures to protect sensitive data, ensure compliance with regulatory standards, and adhere to data privacy policies.

Technical Skills:

Automation Tools	Selenium, Selenium IDE, Web driver, HP Quality Center/ALM, SOAP UI, QTP, Rest Assured, Cypress, Tosca
Test case writing	TestRail, X-ray in JIRA , Lean testing, Trello.
Test Framework	Quality Center, MS Office, Jira, Rally. Keyword Driven, Data Driven, BDD, Hybrid, Page Object Model.
Development Env	Eclipse, Selenium, Visual studio Net Beans
Language/Script	Java, Spring, Hibernate, Java Script, jQuery, SQL, XML, HTML/CSS, Gherkin, Groovy script, Python
J2EE Technologies	Spring AOP, Spring DAO, Spring IOC, Spring JDBC, Spring with Hibernate, Spring Boot, Spring Batch), Microservices
Databases	MS SQL Server TOAD, SQL*Plus, SQL*Loader, MYSQL, snowflake
Web Technologies	JavaScript, HTML, XML, HTML 5.0, Asp.net, PHP, Angular JS
SOA Technologies	SOAP, REST, WSDL, WADL, Web Services, SOAP UI
Processes	Software Testing Life Cycle, Defect Life Cycle, Testing Methodologies, Black Box Testing Techniques, White Box Testing Techniques, Agile Process
Build/CI Tools	Ant, Maven, Jenkins, chef, puppet, Hudson
Frameworks	BDD/Cucumber Framework, Junit, TestNG, TDD, Data Driven, Keyword Driven, Hybrid Frameworks, JBehave, ATF (Automation Test Framework), Page Object Model, Protractor Framework, Appium.
OS	Windows, MacOS, UNIX and Linux
Others	Git, GitHub, SVN, Firebug, Fire Path, JMeter, Cloud Testing, Sauce Labs
Tools/Frameworks	Spring Framework, Spring Boot, Jenkins, Docker, Kubernetes, Jetstream, Consul, Jira, Git, Hibernate, Primefaces, Hadoop, Tableau, Microsoft BI,Power BI

Cloud	AWS ,Azure,GCP
Web Services Test	REST Assured (API Testing)
Domain Knowledge	Health Care Energy, Financials (Banking), E-commerce Data Analytics Data Visualizations Data Ingestion Integration Enterprise
ERP / CRM	Salesforce, SAP
Cloud	AWS, Jenkins CI CD, Dockers, Kubernetes, IBM Udeploy Amazon EC2, Amazon S3, Amazon RDS, AWS Lambda, Amazon SQS, AWS Identity and access management, AWS CloudWatch, Amazon EBS, terraform
Methodologies	Agile (Scrum), Waterfall, SDLC, STLC
Test Framework	Keyword Driven, Data Driven, Hybrid, Page Object Model (POM)
MS Office tools	Outlook, Word, Excel, PowerPoint

Education

Wilmington University - Master's of science in Information System Technologies - 2024

Vignan's Foundation for Science, Technology & Research - Bachelor's in Computer science and engineering -2020

Certifications

ISTQB Certified Tester

Certified Selenium WebDriver Specialist

Professional Experience:

Client : Fidelity investments, Tx

Feb 2024 – Present

Role: Automation Engineer

Project Description: Insurance, Financial Modules implementation

Fin Tech, Financial Account Application will be enhanced to include Pre-Authorized Payment, check account balances and view billing and payment history. The implementation will assist customers with a seamless set up and processing of Pre-Authorized Payments and also provide alerts on Payment and account balance

My Contributions:

- Provide leadership and guidance on Automation Framework and Planning using UFT and Selenium BDD in support of Agile and CICD
- Integrated Cypress test suite with **CI/CD pipelines** (Jenkins/GitLab CI) to ensure continuous testing and early defect identification.
- Customized workflows within **Microsoft Dynamics 365 CRM** to support financial transaction automation, reducing manual processing time by 40%.
- Configured and optimized Azure DevOps pipelines for the Financial Account Application, facilitating rapid onboarding of pre-authorized payment features and reducing go-to-market time by 40%.
- Executed integration testing across B2C financial modules, ensuring seamless interaction of pre-authorized payment features and secure customer data handling.
- Designed and developed test scripts in UFT for validating financial workflows like pre-authorized payments, leveraging VBScript for dynamic data handling.
- Spearheaded the adoption of Tosca to automate end-to-end financial transaction testing, including pre-authorized payments, account balances, and payment history features, reducing manual effort by 60%.
- Integrated Python scripts with Tosca to automate API testing for financial transactions, ensuring real-time data validation and enhancing test reliability.
- Developed **Test Cases** and **Test Strategy** that addresses Database Impacts, Software Scenarios, **Regression Testing, Negative Testing**, Error or bug retests and Usability.

- Operate in Agile methodology by participating in Daily Stand Ups, Sprint Planning, **Technical Grooming**, Retrospective meetings and provide estimates to Testing tasks for **User Stories** in Story Points based on understanding and analysis.
- Configured OpenText ALM to manage test cases and defects, ensuring traceability between requirements and test results.
- Automated API validations for D365 integrations using Tosca and Python, ensuring seamless interactions and data integrity.
- Implemented automated regression testing suites within Azure DevOps to ensure high-quality releases and continuous assessment of critical financial features using Selenium and UFT.
- Designed BDD framework from the scratch by writing **Gherkin feature** scenarios using **Cucumber**.
- Involved in the usage of BDD framework to Develop **Cucumber Step Definitions, Scenarios , Features**
- Wrote Scenarios, Scenario outlines and Step Definitions using **Gherkin** in **Cucumber** for BDD.
- Validated web services manually and through automation using SOAP UI.
- Used Python to develop custom validation scripts for financial data, automating complex data comparisons and validations in Tosca, which improved the accuracy of test results by 25%
- Writing and managing automation test-cases for REST API endpoints using **Postman tool**.
- Developed multiple **Selenium WebDriver** Java scripts for **Black-box Testing**.
- Implemented **SonarQube** as a process of Code quality control for all the applications and services and **integrated with AWS** and on premise **Jenkins**.
- Enhanced the D365 modules by implementing automation solutions for financial reporting and compliance testing using Selenium and UFT.
- Mobile App Testing: Functionality testing, API Testing, Install/uninstall Testing, Usability testing, Security testing, Performance testing.
- Enhanced MS Dynamics CRM to automate financial transactions, significantly boosting the efficiency of payment processing and account management operations.
- Automated financial workflows using Tosca's data-driven approach, leveraging Python for dynamic data generation, enhancing flexibility and reducing manual data preparation efforts by 35%.
- Automated REST API testing using UFT and integrated it into Jenkins pipelines for continuous testing.
- Usability Testing, Browser Compatibility Testing, Ad-hoc Testing, Agile Testing, Black box Testing, Gorilla Testing, GUI software Testing, Globalization Testing, Negative Testing, Sanity Testing, Smoke Testing.
- Developed and Consumed **RESTful APIs** for web applications using **Python**.

Responsibilities:

- Performed Manual and **Automated Testing** with various testing tools.
- Created Test Automation via **JAVA** or Coded UI using **JavaScript**, HTML, CSS, JavaScript, **XML**, **AJAX**, **HTTP**, **Angular** and **jQuery**
- Automated data integrity and synchronization tests between MS Dynamics and proprietary Fidelity databases, ensuring accurate financial reporting and compliance with financial regulations.
- Involved in writing Python **Automation scripts** and executing scripts,
- Designed automated workflows to validate D365's payment processing modules, ensuring accuracy and alignment with business rules.
- Contributed and maintained **mobile automation test** scripts with See Test.
- Enhance scripts for **API automation** using **Soap UI** and **Test Harness**.
- Worked on **SOAPUI** with **WSDL** coverage, WSDL refactoring, composite project, requirement management form-based request editor, XML inspector, Data Source Test Step.
- Develop methods, standards, procedures to determine product quality or release readiness.
- Tested Salesforce standard objects and custom objects, page layouts, fields validations its access to user based on defined profile. Deploy code to production using tools like **TeamCity**, **Jenkins**,
- Worked on Microsoft Azure (Public) Cloud to provide IaaS support to client. Create Virtual Machines through Power Shell Script and Azure Portal.
- Collaborated with the DevOps team to integrate Tosca with the CI/CD pipeline, using Python scripts for triggering automated tests in Jenkins, streamlining the release process.
- Use Postman and Rest Assured to test and automate rest webservice/API.
- Created reusable UFT function libraries in VBScript to enhance script maintainability and reduce redundancy

across financial modules.

- Written Gherkins and Java scripting automation test scripts to execute in cucumber.
- Implemented Page Object Model Automation framework with Java, Selenium Web Driver and cucumber
- Conducted browser compatibility testing and data validation using OpenText ALM for comprehensive module validation.
- Developed custom dashboards in Azure DevOps to provide real-time insights into test automation results, facilitating transparent communication with stakeholders and Attention to Detail, continuous improvement of project deliverables.
- Proficient in using test Automation tools such as Selenium WebDriver/RC/IDE/Grid, Cucumber, Protractor, QTP, Appium to develop Automation testing scripts for web, Mobile and client server applications

Environment: Selenium, JAVA, Agile Methodology, Rally, QA Complete Web Services (SOAP & RESTFUL), Postman, SOAP UI, Test Harness, Cucumber, Gherkin, HTML, JavaScript, Firefox, IE, Chrome, Linux, SQL, Oracle, Tableau, SAP

Client: Sapotech Solutions, India

Jan 2021 - Dec 2022

Role: Automation Test Engineer / SDET

Project: deals with ecommerce/M-commerce development of websites to enable customer to select for products. Project uses JavaScript, **ReactJS and Node JS** for designing and implementing User Interface. QA involved in testing of UI layout and of web application that uses wireframes HTML5, CSS3 and React JS on AWS cloud. Used Agile (SCRUM) methodologies for Software Development Lifecycle of the dynamic J2EE project. This project has UI and API modules. Main aspect of project is to provide shopping cart functionality to customers or to third party API consumption.

My Contributions:

- Created reusable libraries in **Java** to test automation, build **page object models (POM)** to create reusable code.
- Configured **Java Selenium Web Driver, TestNG, Maven** tool and created **selenium automation Java** using **TestNG framework** and **page object model (POM)**.
- Developed and maintained Python scripts for integrating Tricentis Tosca with RESTful API testing, ensuring that API endpoints for product and transaction data were accurately validated in real-time.
- Automated the validation of shopping cart functionalities using Tricentis Tosca, with Python scripts enhancing the flexibility of test data management, reducing manual testing efforts by 45%.
- Improving maintainability and design of legacy code by integrating a **JUnit** test harness and refactoring.
- Identified test cases to automate, automated those test cases using **Selenium WebDriver** and **JUnit**.
- Created Stored Procedures, Views, Triggers, User defined Functions and scripting Complex **T-SQL** logics for business logics. Built automation framework in Selenium WebDriver using behavior driven (**BDD**) in Cucumber Configured and launched builds using **Jenkins** jobs and analyzed the Test Results from **Jenkins UI**. Integrating Jenkins **with AWS and Open stack to automatically launch instances**.
- Worked on Microsoft Azure (Public) Cloud to provide IaaS support to client. Create Virtual Machines through Power Shell Script and Azure Portal.
- Maintained a high level of test coverage for both **UI and API testing**, minimizing manual testing efforts by over 40%.

Responsibilities:

- Worked in a highly dynamic **AGILE** environment and participated in all scrum events such as Backlog grooming, Sprint Planning, Daily Scrum, Demo and Retro meetings.
- Created test suites for **Regression testing, Smoke testing** and **Sanity testing**. Executed various test plans for identifying defect reported them with details log information and screenshot in defect tracking
- Involved in debugging, troubleshooting **API** proxies using Trace tool and analyzing performance metrics.
- Involved in debugging and bug fixing of application modules using **Bugzilla** for tracking.
- Used Tosca's data-driven testing capabilities combined with Python scripts to automate cross-browser testing, ensuring consistent user experiences across major browsers.
- Integrated Tricentis Tosca automation into the CI/CD pipeline with Python scripts, automating test execution in Jenkins for frequent builds and ensuring faster feedback loops.
- Designed custom Python scripts to complement Tosca's capabilities for complex data validations, particularly for large datasets related to customer transactions and product inventories, improving test accuracy by 30%.

- Wrote Scenarios, Scenario outlines and Step Definitions using **Gherkin** in **Cucumber** for BDD.
- Validated web services manually and through automation using SOAP UI.
- Writing and managing automation test-cases for REST API endpoints using **Postman tool**.
- Involved in writing automated scripts for application using **Java scripts**.
- Used Appium for mobile app testing Android and iOS. Integrated Appium for distributing tests on the cloud. Implemented simulator for mobile app testing in IOS using Appium Tool.
- Worked on **SOAPUI 4.5.0** with WSDL coverage, WSDL refactoring, composite project, requirement management form-based request editor, XML inspector, Data Source Test Step.
- Design document **REST/HTTP, SOAP APIs**, including JSON data formats and API versioning strategy.
- Extensively involved in writing manual test cases, automated test scripts and executing manual and automated test scripts for **System testing and Regression testing**.
- Created Stored Procedures, Views, Triggers, User defined Functions and scripting Complex **T-SQL** logics for business logics.
- **Environment:** Java, Selenium WebDriver, ALM, TestNG, SQL, Maven, Postman, Cucumber, Gherkin, Appium.

Client : ZoronIT Solutions, India

June 2019 – Dec 2020

QA Analyst

Project Description: **Supply Chain , SCM , E-Commerce Based**, Shop online. The project was about providing 24*7 support to the end users as well as Business/IT users for different MM and WM (SAP) related issues, extracting data as per the business requirement building logic for new report/program development modification in existing programs

Responsibilities: Test application, including coordinating the installation of application, Requirement Analysis and Review Business Requirements.

- Flashing builds Firmware and test binaries for user and user debug with the help of Samsung Odin 3 and LG – LGUP and DLL files, Apk files, and Csc files.
- Experience in working for angular based web application.
- Developed custom libraries for automation using JAVA& Selenium Web Driver.
- Involved in design and implementation of Selenium Web Driver automation framework for smoke and regression test suites (TestNG).
- Execute automation scripts for Mobile Native applications on Android platforms using Appium and Java.
- Used Appium for mobile app testing Android and iOS. Integrated Appium for distributing tests on the cloud.
- Implemented simulator for mobile app testing in IOS using Appium Tool.
- Performed SOAP Web services testing and hands on experience in automating it by using Groovy Scripting.
- Used SOAP UI tool to test SOA based architecture application to test SOAP services and REST API.
- Involved in analyzing system specifications, design, development and execution of test plans and test cases for Manual and Automated testing.
- Worked on new tools(XCTest, Espresso...) and languages(Swift, Kotlin...) to get things done.
- Build Automation Framework for AngularJS, Node.js and involved in testing AJAX components with Protractor and Selenium WebDriver.
- Performed **cross-browser testing** to ensure consistent behavior across major web browsers.
- Used Collections in Python for manipulating and looping through different user defined objects.
- Performed blackbox testing like GUI, white box, integration, progressive, FitNesse and system testing.

Environment: Android SDK, Android Studio,AWS,XCTest,Espresso,TestNG,Rally,AWS,JIRA,QC/ALM,Android Framework,SQ Lite,Cucumber, Android API's, Java, Selenium WebDriver Appium, postman,JDK,XML,QXDM,JSON, MVP, UI, Glide.
