**+1 (408) 628 2142**  
**Java Full Stack Developer**

## **PROFESSIONAL SUMMARY:**

---

- Over **4+ years** of professional IT experience in **Software Analysis, Design, Development, Implementation, Testing, Deployment, and Support** of **web/enterprise** based on client/server applications.
- Strong **programming skills** in **Java** and **J2EE** with extensive ability to develop scalable applications.
- Having good knowledge of all phases of Software Development Life Cycle (**SDLC**) with expertise in Requirement Gathering, Analysis, Design, and Development & Testing.
- Experienced in **Core Java** such as **OOPs, Collections Framework, Exceptions Handling, Input/output (I/O) Systems, Swing, Annotations, Concurrency, and Multi-Threading**.
- Designed and created business applications with **J2EE (JSP, JDBC, Servlets), Spring, Hibernate, Java Beans, XML, Web Services(RESTful, SOAP)**, along with **Swing, Serialization, and Externalization**.
- Expertise in UI Design and Development using **React, HTML5, CSS3 (SASS, LESS), JavaScript (ES5/ES6/ES7), Angular JS, Bootstrap**, and **AJAX** that follows **W3C** Web standards and successfully manages all application development facets.
- Experienced in implementing **Microservices, Service Oriented Architecture (SOA) with XML-based Web Services (SOAP/UDDI/WSDL)** using Top-down Approach and Bottom-Up Approach.
- Enough measure of involvement in understanding and hands-on using various extensible Markup Languages (**XML**) technologies like **XPath, XQuery, DOM, and JAXB**.
- Good Experience working with (**AWS**) **Amazon Web Services (EC2, S3, EBS** (Infrastructure as a Service - **IAAS**), **IAM, SQS, SNS, Lambda, ECS, Cloud Watch, Cloud Front, IAM, AWS CDK, CloudFormation** (Infrastructure as a Code - **IAAC**)), Elastic Search APIs.
- Designed, implemented, and deployed large-scale applications using a magnitude of **AWS services** for the applications to be fault tolerant, highly-available, and scalable.
- Experienced in developing data access /persistence layer using **Spring MVC**, and **Object Relational Mapping (ORM) frameworks** like **Hibernate** and used **Hibernate Annotations** to reduce time at the configuration level.
- Possess working Knowledge of Python and Ruby in Writing Scripts to automate software configuration processes with Chef and Puppet.
- Strong Experience in Micro Services to provide **RESTful API** utilizing Spring Boot with Spring MVC.
- Solid knowledge of relational database design (**RDBMS**), **SQL databases** like Oracle, MySQL, and Microsoft SQL Server and development (SQL, stored procedures, data modeling), and **NoSQL databases** (MongoDB, DynamoDB).
- Worked broadly on different **IDEs** such as **Eclipse, IntelliJ, NetBeans, and Spring Tool Suite**, and deployed using **Web Server Apache Tomcat, JBoss, and Web Sphere**.
- Strong experience with **JUnit, Mockito, and TestNG** in performing unit tests and determining the application functionality.
- Experience with Continuous Integration / Continuous Delivery (**CI/CD**) tools **Docker**, and **Jenkins** for deployment.
- Worked with build tools like **Maven**, and **Gradle** for building applications in different environments.
- Experience in using code repository tools - **SVN** and **GitHub**.
- Strong understanding and experience with all the phases of the Software Development Life Cycle (**SDLC**) and different software methodologies **Agile** development methodologies including **Scrum**, and **Kanban**. Involved in daily scrum meetings to keep track of the ongoing project status and issues.
- Excellent **communication, analytical, business, and interpersonal skills**.
- Highly motivated to take independent responsibility and contribute to being a great team player.

## TECHNICAL SKILLS:

|                       |                                                                                                                                                                           |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Programming Languages | Java(Core Java, Java8), C, C++, JavaScript, TypeScript                                                                                                                    |
| Web Technologies      | HTML, CSS, Bootstrap, React, Angular, Node, jQuery, JSON RESTful, DOJO, JSF                                                                                               |
| Frameworks            | Spring, Hibernate, Boot, Flask                                                                                                                                            |
| IDE, Editors          | Eclipse IDE, Net Beans IDE, IntelliJ IDEA, Adobe Dreamweaver, Microsoft Visual Studio, Sublime Text.                                                                      |
| Database              | MySQL, PL/SQL, Oracle, MongoDB, PostgreSQL, AWS (Dynamo DB, Redshift)                                                                                                     |
| AWS                   | EC2, S3, DynamoDB, EBS, Lambda, ECS, IAM, SQS, SNS, Redshift, EMR, Route53, VPC, CDK, CloudFormation, EC2 API Gateway, Data Pipelines, Glue, RDS, CloudWatch, Sage maker. |
| Testing Tools         | Junit, TestNG, Mockito, Log4j                                                                                                                                             |
| Version Control       | Git, GitHub, GitLab, SVN                                                                                                                                                  |
| Software Engineering  | SDLC, Agile, Waterfall, Scrum                                                                                                                                             |
| Build Tools           | ANT, Maven, Gradle, Vagrant, Docker, and Jenkins                                                                                                                          |
| Operating Systems     | Windows, UNIX, and LINUX                                                                                                                                                  |

## PROFESSIONAL EXPERIENCE:

Amazon.com Services Inc.

August 2021 – March 2024

Sunnyvale, CA, USA

Software Development Engineer

*Team: Alexa Home Productivity*

- **International locales launch:** Designed and worked on launching Alexa kitchen experiences in new international locales as part of Alexa's worldwide engagement growth. Yielded in **~3.5 million incremental monthly interactions**, helping drive higher worldwide engagement for kitchen services in international markets.
- Developed service classes, and DAOs classes as per the design and developed code for business logic using **CORE JAVA API** and **data structures**.
- Involvement in complete **SDLC** management - Requirements gathering, Design, Analysis, Development, and Testing.
- Experienced in developing **microservices architecture** to be scalable and resilient distributed systems leveraging **Java-based frameworks** and technologies.
- **Prediction models:** Designed and implemented **ECS fargate jobs** to leverage the Machine Learning capability to predict cuisines & courses and automate metadata tagging in the data corpus to classify the content, contributing to a **25% increase in customer engagement**.
- Designed and built AWS infrastructure for the preprocessing and postprocessing jobs using **AWS Cloud Development Kit (CDK)** focussed on creating robust, efficient, maintainable, and scalable applications.
- Implemented multiple dashboards for monitoring metrics, system performance, and alarms for error handling using **AWS CloudWatch** along with the creation of logs.
- Responsible for creating infrastructure with **AWS CloudFormation** (Infrastructure-as-code provisioning) and **AWS CDK**, created many IAM user groups, roles, and policies to grant and restrict access and permissions to services.
- **Enhancing the corpus:** Worked on web scraping initiative from design to launch by enrolling websites for precise data extraction.

- Application Development and Partnering with the project team to analyze business requirements, understand business goals, define project roadmaps, and define use cases to deliver technical solutions.
- **Created APIs** using **Lambda(Serverless)** in **JAVA** for the crawled data processing system to process extracted files from the Amazon web crawler.
- Contributed significantly to developing a robust system, involving scraping, processing, and filtering content, resulting in a remarkable **50% expansion of our data corpus in S3 storage** and providing more content for Alexa customers.
- Used AWS Simple Queue Service (**SQS**) and Simple Notification Service (**SNS**) as a **pub/sub** messaging service between various components in the architecture.
- Developed new functionalities for the **Java-based Applications**: Alexa Kitchen Service and Alexa Content Ingestion Service aimed at boosting search relevance and refining intelligent taste profiles more tailored food inspirations are presented on Alexa.
- Interacted extensively with **AWS S3** database for managing storage, retrieval and permissions to the large data corpus owned by Alexa Kitchen Team.
- Utilized **Kibana** as part of **Elastic Search** for data visualization, analysis and elastic search querying.
- Crafted user-friendly **dashboards** to monitor and analyze customer-perceived defect rates.
- Created Quality performance metrics and alarms (**AWS CloudWatch**) on the system and upstream data to detect degrading performance or anomalies.
- Developed applications with **CI/CD** pipelines with bake times and approval workflows using Integration Tests and deployed CD pipeline for staging and production.
- Extensively used version control software like **GIT**. Developed and deployed various code enhancements and tracked all the enhancements and issues using the **ticketing system**.
- Integrated authentication and authorization mechanisms to ensure secure access to the monitoring dashboard.
- Facilitated seamless **onboarding** and **mentoring** of new interns and colleagues, also served as a **Scrum Master** for the team.
- Developed **JUnit** test cases for Unit testing, integration, and Functional Testing, and ran automated unit tests using **Mockito** for the purpose of Test-driven Development.
- Applied different **troubleshooting** techniques to get solutions to customers' critical problems as a part of 24/7 **on-call support**.

#### **Team: AWS Elastic Block Store**

- Worked in Elastic Block Store (**EBS**) health and insights team for health monitoring and automated remediations for the fleet.
- Upgraded and maintained the **backend Java Application** for service orchestration of the Elastic Block Store for efficient provisioning, configuration and management of the storage volumes.
- Accomplished **tier-1 resiliency** by securely scaling infrastructure and provisioning of EBS.
- Designed and implemented a fault-tolerant data replication mechanism, reducing the probability of data loss during hardware failures by **30%**.
- Used **Log4J** logging framework for logging messages at various levels.
- Improved the **offline capacity of the servers by 15%** by handling burnin failures and ensuring a healthy fleet by dynamic allocation of resources to meet fluctuating demand while optimizing costs.
- Implemented **various** functionalities and workflows in **JAVA** to interact with the EBS server's status and find the root cause of the issue and apply remediation measures.
- Developed a business logic layer using **spring Dependency Injection** and client-side Java beans for **DAO Design Patterns**.
- Identified potential diagnostic breaches and **refactored code** to eradicate them.
- Developed **Java API's** for creating, attaching, detaching, and deleting EBS storage volumes to the Amazon Elastic Compute Cloud (**EC2**) instances.
- Leveraged AWS technologies such as Amazon **EC2**, Amazon **S3**, and AWS **Lambda** to build resilient data storage solutions that ensure high availability and durability.
- Used **JUnit** and **Mockito** to create unit test tasks for all features.
- Engaged in peer **code reviews**, providing constructive feedback and adhering to best practices to ensure code quality, maintainability, and scalability.

- Applied Agile principles and practices to software development projects, ensuring iterative and collaborative delivery.
- Handled Operational Excellence tasks to curb the risks and led the **on-call rotation** to ensure the flakes were resolved on time.

---

**Santa Clara University Frugal Innovation Hub**  
**Santa Clara, CA, USA**  
**Software Developer**

**December 2019 – March 2021**

- Worked on developing a mental health application, for Santa Clara University students designed in collaboration with the Public Health Department.
- Leveraged **React** component-based architecture to modularize the application's front end, enhancing code maintainability and scalability.
- Involved designing in web pages using HTML 5, CSS3, JavaScript, Bootstrap, React js, Redux.
- Implemented various screens for the front end using **ReactJs** and used various predefined components from **NPM** (Node Package Manager) and **redux** library.
- Utilized **React Hooks** to manage state and lifecycle events in functional components, resulting in cleaner and more maintainable code.
- Used **Redux** for **state management** and handling data flow and implemented lazy loading for faster response times.
- Worked in using **React JS components**, Forms, Events, Keys, Router, Animations, and Flux concepts.
- Involved in application development in Java 8 coding with Java APIs to fulfill the implementation of business logic.
- Integrated **MongoDB** with the React frontend to enable seamless interaction between the application's frontend components and the database backend.
- Implemented data persistence in **MongoDB** to store user-related information, session data, and other application data on the backend, ensuring data integrity and durability.
- Designed and developed Micro Services business components using SpringBoot.
- Employed **HTML** and **CSS** to structure and style the user interface, adhering to modern design principles and accessibility standards.
- Used **React JS** for improving the performance of the app by using the Reusability concept.
- Leveraged React's virtual **DOM** and efficient **rendering** mechanisms to optimize performance.
- Collaborated with the design team to implement UI from mockups, enhancing UX to follow the material design.
- Integrated several third-party UI libraries like **Material UI** for appealing interfaces that improved user flow within the application.

---

**United Health Group - Optum Global Solutions**  
**Software Development Engineer**

**June 2018 – August 2019**

- Worked on maintaining an application for claims adjudication processing in United Health Group.
- Developed scalable backend services using **Java** and **Spring Boot framework**, facilitating efficient processing of claims adjudication requests.
- Developed components using **Spring Framework** (Spring MVC, Core, dependency injection, Bean, spring security, Spring AOP, Spring Boot, Aspects, Dependency Injection).
- Extensive experience in leveraging **JAVA 8's** functional programming capabilities to write concise and expressive code for data processing and manipulation.
- Experience in designing, implementing, and testing services in a **Microservices** architecture and implementing the **REST-based** microservices using Spring boot.
- Designed and implemented **MVC architecture** for the claims adjudication application, enhancing code modularity and maintainability.

- Extensively used **JAVA 8** features like **Streams, Lambda Expressions, Functional Programming, Executor Service, etc.**
- Worked on **Java REST API** development and developed a data persistence framework for working with huge datasets.
- Actively used the tracking tool **JIRA** to create and track the stories and sub-tasks throughout the Sprint and crucible to do the code reviews.
- Implemented new **UI mockups** for new workflows for processing the claims using **Figma**.
- Involved in unit testing using **JUNIT** and performing Integration testing and system testing.
- Collaborated with the **QA team** to plan and execute manual testing procedures, verifying system functionality and identifying defects early in the development lifecycle.
- Experience with **Docker** commands for building, managing, and deploying containers efficiently.
- Integrated message brokers like **RabbitMQ** and **ActiveMQ** for message queuing and asynchronous communication between different modules.
- Managed source code using the **GIT** version control system, facilitating collaborative development and enabling streamlined code review processes.
- Integrating various build tools and deployment methodologies into **Jenkins** to create end-to-end orchestration build cycles.
- Demonstrated expertise in utilizing **Postman** for end-to-end testing and API documentation.
- Proficient in utilizing **Oracle database** for storing and managing data related to claims adjudication processing at United Health Group.
- Developed and optimized **PL/SQL** stored procedures, functions, cursors, and views to support efficient data retrieval and manipulation within the Oracle database environment.
- Integrated **Oracle database** seamlessly with **Java backend services** developed using **Spring Boot framework**, enabling smooth data flow and interaction between different application components.
- Involved in the development's continuous integration and deployment (**CI/CD**) and fixing production issues.
- Experience in using **Gradle** for tasks such as compiling, testing, packaging, and deploying applications.
- Actively participated in **Agile** development practices, including sprint planning, daily stand-ups, and retrospective meetings, fostering collaboration and continuous improvement within the team.
- Awarded two Spot Awards as a recognition of compassion and integrity towards work.
- Acquired, integrated, and processed healthcare and insurance domains in the IT industry.
- Excellent written and verbal communication skills, interpersonal skills, and self-learning attitude.

## EDUCATION:

---

### Master's Degree (MS) - Computer Science and Engineering

Santa Clara University, Santa Clara, USA

### Bachelor's Degree (BS), Computer Science and Engineering

VNR Vignana Jyothi Institute of Engineering & Technology, Hyderabad, India

**Relevant Courses:** Data Structures, Analysis and Design of Algorithms, Database Management Systems, Operating Systems, Object Oriented Programming, Computer Architecture, Cloud Computing.
