SUMMARY

Data Analyst with 6 years of experience building advanced analytical solutions using Python, SQL, and statistical modeling techniques. Expert in predictive analytics, cohort analysis, and dashboard development with Power BI and Tableau. Proven ability to deliver measurable business improvements through data-driven insights, process optimization, and strategic recommendations that enhance organizational performance and decision-making effectiveness.

SKILLS

Methodologies: Agile, SDLC, Waterfall

Programming Languages: Python, SQL, R

Libraries: Pandas, NumPy, Scikit-Learn, Matplotlib, SciPy, Plotly

Database: Microsoft SQL Server, Oracle Database, PostgreSQL, MongoDB

Statistical Analysis: Hypothesis Testing, A/B Testing, Regression Analysis, Descriptive Statistics

Project Management Tools: Jira, Microsoft Project, Trello, Asana

Data Visualization: Tableau, Power BI, Microsoft Excel (advanced)

Cloud Platforms: AWS, Microsoft Azure

Version Control: Git, GitHub

Soft Skills: Critical thinking, problem-solving, Attention to detail, Data storytelling, Collaboration with cross-functional teams

EDUCATION

Master of Science in Computer Information Systems | New England College, New Hampshire

June 2021

Bachelor of Technology | SS Institute of Technology, India

May 2015

PROFESSIONAL EXPERIENCE

Data Analyst | BNY, New York

January 2024 - Current

- Extracted and validated financial data from multiple internal databases using **SQL** and **Excel**, ensuring high data quality by performing missing value checks, duplicate removal, and reconciliation across systems.
- Performed **time series analysis** using **SAS** and **statistical modeling** to identify trends in financial data, generating actionable insights that enhanced variance analysis and supported cost-benefit assessments for management.
- Conducted comprehensive **A/B testing** analysis using **Python** to evaluate business performance initiatives, providing quantifiable ROI metrics and statistical insights that informed management decision-making processes.
- Created interactive financial dashboards in **Power BI** using **Power Query**, cutting reporting time by 35% and enabling real-time monitoring of **KPIs** while supporting variance analysis with business context for management decision-making and forecasting models.
- Performed **data validation** and quality assessment across multiple financial databases, developing forecasting models that improved business planning accuracy by identifying data inconsistencies and enhancing strategic decision-making capabilities.

Data Analyst | Humana, New York

January 2021 – December 2023

- Analyzed 50K+ patient records using **Python (Pandas)** and **SQL** to identify treatment trends and uncover key factors influencing patient outcomes, enabling a 30% improvement in decision support for healthcare providers through data-driven insights.
- Conducted comprehensive **data quality assessments** and **statistical analysis** on healthcare metrics using **MySQL** databases, ensuring **HIPAA compliance** throughout all patient data handling processes while generating insights that improved care coordination across multiple departments.
- Performed advanced **cohort analysis** and **patient segmentation** using **R** and **Tableau**, identifying high-risk patient populations and utilization patterns that enabled proactive care management strategies and reduced readmission rates by 22%.
- Executed **clinical data analysis** and **outcomes research** using **SAS**, analyzing treatment effectiveness across different patient demographics and creating evidence-based recommendations that informed clinical protocol improvements for healthcare teams.
- Applied **survival analysis** and **logistic regression** techniques to analyze patient journey data, developing risk stratification models that enhanced care pathway optimization and supported population health management initiatives across the organization.

Data Analyst | Vivma Software Inc, India

September 2018 – August 2019

- Conducted data quality assurance using **SQL** for querying and **Python** for cleansing customer subscription datasets, reducing error rates by 18% while ensuring data integrity for the Customer Churn Prediction project.
- Analyzed historical customer usage and support patterns to identify key factors linked to cancellations, helping the business target high-risk customer groups and improve retention by 12%.
- Created an IT Services Revenue & Customer Growth executive dashboard in **Tableau**, visualizing subscription growth trends and financial **KPIs**, enabling data-driven decisions, improving resource allocation.
- Worked with product teams in an **Agile** environment to analyze user engagement and subscription behavior, using data to support pricing model experiments and guide marketing and feature development strategies.
- Performed **behavioral analytics** and **customer lifetime value** calculations using **Excel** and **Python**, analyzing subscription patterns and usage data while ensuring compliance with data privacy protocols, generating insights that supported customer success initiatives and revenue optimization strategies.
