## Business Analyst

CT, USA | 5513092638 | vishnuvardhansrinivasan24@gmail.com | [Linkedin](#)

### SUMMARY

- Business Analyst with **4 years** of experience in **Agile, Waterfall, and Kanban methodologies**, driving efficient project execution and fostering adaptability in dynamic environments.
- Proficient in programming languages such as **Python and R**, with **advanced SQL** skills for robust database management. Experienced in data visualization tools like **Tableau and Power BI**, enabling in-depth data analysis and compelling reporting.
- Expert in developing essential project documentation, including Functional Requirement Documents (**FRD**), Business Requirement Documents (**BRD**), and Software Requirement Specifications (**SRS**), ensuring clarity, precision, and traceability of requirements throughout the software development lifecycle.
- Skilled in utilizing analytical frameworks such as **SWOT and Risk Analysis** to evaluate project feasibility and impact, providing stakeholders with data-driven insights to inform strategic decision-making.

### SKILLS

|                                   |                                                                                                                                                                                                                                                                                                                                |
|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Methodology:</b>               | SDLC, Agile, Waterfall, Kanban                                                                                                                                                                                                                                                                                                 |
| <b>Programming Languages:</b>     | Python, R                                                                                                                                                                                                                                                                                                                      |
| <b>Database Management:</b>       | SQL, MS XS, MS Excel, Requirements Traceability Matrix (RTM)                                                                                                                                                                                                                                                                   |
| <b>Documentations:</b>            | FRD, BRD, SRS, User Guide, User Stories, Use cases                                                                                                                                                                                                                                                                             |
| <b>Project Management Tools:</b>  | MS Project, MS Excel, MS SharePoint, Asana, Trello, Rally                                                                                                                                                                                                                                                                      |
| <b>Visualization Tools:</b>       | Tableau, Power BI,                                                                                                                                                                                                                                                                                                             |

| <b>Tracking Tools:</b>            | Jira, HP Quality Center, Rational ClearQuest, RTM                                                                                                                                                                                                                                                                              |
| <b>Cloud Computing Platforms:</b> | AWS, Azure                                                                                                                                                                                                                                                                                                                     |
| <b>ERP Planning &amp; CRM:</b>    | SAP, MS Dynamics Nav, Salesforce, HubSpot                                                                                                                                                                                                                                                                                      |
| <b>Technical Skills:</b>          | KPI, UAT, Test Plans, Alteryx, Requirement gathering, Google Analytics, Data Analysis, MS Visio, JAD, MS 360, Web XP, Software development & testing, Data Modelling, Database Knowledge, Business Intelligence (BI) Tools, Process Mapping, User Experience (UX) Understanding, Quality Assurance (QA) Knowledge, Prototyping |
| <b>Soft Skills:</b>               | Time management, Leadership, Management, Problem-solving, Negotiation, Decision-Making, Documentation, and Presentation, Verbal communication, Sprint Planning                                                                                                                                                                 |

### EDUCATION

**Master of Science in Data Science** | Pace University, New York

**May 2024**

**Bachelor of Engineering - Computer Science** | Anna University, India

**Apr 2020**

### EXPERIENCE

**Business Analyst || Cigna, USA**

**Sep 2023 -Current**

- Conducted comprehensive patient journey mapping to identify critical touchpoints and optimize patient experiences, leveraging methodologies, particularly Kanban, to facilitate iterative enhancements and continuous delivery.
- Developed robust data processing scripts in Python to automate the ETL (Extract, Transform, Load) processes for patient data analysis, enabling real-time insights into patient interactions and behaviors.
- Employed SQL for efficient querying and management of large datasets, ensuring precise data extraction and analytics to drive actionable insights for patient journey mapping initiatives.
- Crafted detailed Software Requirement Specifications (SRS) that articulated project objectives, stakeholder needs, and technical requirements for system enhancements, ensuring alignment with Agile practices.
- Collaborated with cross-functional teams using Rally for agile project management and tracking, promoting transparency, accountability, and sprint backlog prioritization throughout the development lifecycle.
- Created interactive dashboards and visualizations in Power BI to effectively present findings and monitor key performance indicators (KPIs) related to patient satisfaction, engagement, and outcomes.
- Implemented AWS solutions, including S3 for data storage and Redshift for data warehousing, ensuring secure, scalable, and high-performance access to patient data for informed decision-making.
- Developed process maps and flowcharts using MS Visio to visualize patient journey stages and identify inefficiencies, supporting the overall optimization strategy.

- Conducted risk analysis to identify potential project risks and develop mitigation strategies, ensuring proactive management of issues that could impact project timelines and deliverables.
- Supported Salesforce integration efforts to streamline patient relationship management (PRM) and enhance omnichannel communication strategies across various touchpoints.
- Utilized Alteryx for data blending, predictive analytics, and advanced reporting, optimizing patient data workflows and enhancing business intelligence capabilities.
- Conducted SWOT analysis to assess project feasibility and impact, delivering strategic recommendations to stakeholders based on comprehensive market and competitive insights.
- Engaged stakeholders through structured workshops and interviews to elicit requirements, ensuring alignment with business objectives and fostering patient-centered care practices.
- Facilitated continuous feedback loops and retrospective sessions to iteratively enhance patient journey improvements, ensuring alignment with evolving patient needs and organizational objectives.

## **Business Analyst || Wipro, India**

**May 2019 – Aug 2022**

- Spearheaded a critical project to optimize an existing e-commerce platform by implementing advanced data-driven features, enhancing the overall user experience, and resulting in a significant uplift in user engagement and transaction completion rates.
- Collaborated closely with development teams to engineer Python scripts that automated data processing workflows by 30%, thereby enhancing system efficiency and minimizing manual intervention.
- Conducted comprehensive data analysis and reporting leveraging MS Excel, developing interactive dashboards and visualizations that monitored key performance indicators (KPIs) and critical project metrics with precision.
- Developed and maintained essential documentation, including Functional Requirement Documents (FRD) and Business Requirement Documents (BRD), ensuring clear articulation and 49% traceability of both business and technical requirements throughout the project lifecycle.
- Utilized MS Project for meticulous project planning and management, including Gantt chart creation, resource allocation, and task assignment, ensuring strict adherence to project milestones and deliverables.
- Designed and deployed sophisticated data visualizations using Tableau, presenting analytical insights that facilitated data-driven decision-making for executive stakeholders.
- Executed gap analysis to assess current system capabilities against defined project requirements, delivering 35% actionable insights for system enhancements and feature development initiatives.
- Managed quality assurance processes through HP Quality Center, ensuring compliance with established testing protocols and that all project deliverables met stringent quality and performance standards.
- Collaborated with IT infrastructure teams to deploy platform enhancements on Azure, ensuring robust scalability, performance optimization, and reliability of the e-commerce application.
- Supported the integration of the e-commerce platform with SAP, streamlining 56% of operational workflows and enhancing data synchronization between disparate systems.
- Conducted stakeholder engagement through workshops and interviews to gather and document comprehensive business requirements, ensuring alignment with overarching business objectives.
- Created detailed process maps utilizing advanced process mapping tools to visualize existing workflows, identify bottlenecks, and recommend targeted process improvements.
- Executed Agile methodologies, facilitating iterative project management through daily stand-ups, sprint planning sessions, and retrospectives, enabling rapid adaptation to evolving project requirements.
- Conducted impact analysis to evaluate the potential effects of proposed changes on existing systems and processes, providing stakeholders with insights to make informed decisions and minimize disruptions.
- Developed interactive prototypes and wireframes using industry-standard tools to demonstrate new features and functionalities, allowing stakeholders to visualize potential changes prior to development.
- Collaborated with data engineering teams to design and refine robust data models, ensuring alignment with analytical requirements and maintaining data integrity across the e-commerce platform.
