SUMMARY

With over 5 years of experience as a Java and Full Stack Java Developer, I've excelled in developing robust applications across the full Software Development Life Cycle in AGILE and Waterfall settings. My expertise includes building dynamic front-ends using HTML5, CSS3, JavaScript, AngularJS, and NodeJS, and crafting efficient back-end solutions with Java, leveraging MVC architecture, Spring, and Hibernate. I've effectively managed AWS cloud services, implemented microservices, and developed RESTful web services, ensuring application scalability and security. Proficient in Docker for microservices deployment and skilled in CI/CD practices using Maven, Ant, and Jenkins, I've maintained high standards of code quality and performance. My active participation in agile methodologies, adherence to best coding practices, and commitment to Test-Driven Development highlight my holistic approach to software engineering, delivering high-quality, user-centric solutions.

SKILLS

TECHNICAL SKILLS:

Languages: Java7/8, C#, J2EE, J2SE, Scala, XML

Web Technologies: SERVLETS, JSP, JavaBeans, Java Servlet API

J2EE Technologies: JSP, Servlet, Spring 2.x/3.x, Struts/Struts 2, Hibernate 3. x, Expression Language, JPA,

JDBC, Java Mail, EJB, JMS, AMQP, Apache Camel, OAuth1/2.

Application/Web servers: Apache Tomcat, IBM WebSphere, Jetty, Jenkins, WebSphere MQ

Databases: Oracle, SQL server, MySQL, DB2

Internet Technologies: HTML5, JavaScript, CSS3, jQuery, Angular JS, Bootstrap, NodeJS

Cloud Environments: AWS, Netflix Eureka, Kubernetes

Message Queues: JMS, Active MQ, Rabbit MQ, Kafka

Operating system: Windows, Linux Mint, Unix

Defect tracking Tools: JUnit, JIRA, Bugzilla.

Reporting Tools: Jasper Reports, Crystal Reports XI, SSRS

Methodologies: Agile, waterfall, TDD (Test-Driven-Development), Scrum

Developer IDE Platforms: Eclipse, Edit Plus, Notepad ++, TEXT PAD, Net Beans, IntelliJ, Spring Tool Suite (STS), GitHub

Build Tools: Ant, Maven, Gradle

Web Services: SOAP, REST

EXPERIENCE

Full Stack Java Developer

FANNIE MAE

November 2021 - Present, US, VA, Reston

• Responsibilities:

- Thrived in an AGILE development environment, actively participating in scrum and sprint meetings to ensure agile project management and timely delivery of features.
- Spearheaded the development of new front-end components from scratch utilizing a modern tech stack including HTML5, CSS3, JavaScript, jQuery, Bootstrap, AngularJS, and NodeJS, enhancing user experience and interface responsiveness.
- Configured and managed NodeJS runtime environment tasks using Gulp for asset injection, CSS preprocessing, magnification, test automation, and live-reload capabilities, streamlining front-end development processes.
- Designed and implemented AngularJS custom directives, factories, and services adhering to coding standards, and leveraged Core Java for robust backend logic, including exception handling and data structures.
- Consumed RESTful web services using AngularJS, NodeJS, and jQuery, efficiently handling JSON data and AJAX calls to render dynamic content on the front end.

- Leveraged Java 8 advancements such as lambda expressions, parallel stream operations, and multithreading for improved data processing and application performance.
- Developed and maintained AWS cloud-based solutions, including EC2 instance management, AWS Lambda functions for event-driven operations, and integration with S3 for media storage and CloudWatch for application monitoring.
- Utilized AWS SQS for message queuing services and implemented custom IAM policies for secure and rolebased access to AWS resources.
- Experienced in troubleshooting and optimizing applications within AWS, Netflix Eureka, and other cloud environments, ensuring high availability and performance.
- Implemented microservices architecture and SOA principles, using both top-down and bottom-up approaches for SOAP/UDDI/WSDL web services, enhancing system modularity and scalability.
- Integrated Spring Framework with Hibernate to leverage the MVC pattern for clear separation of concerns and efficient data management.
- Developed RESTful web services using Spring, Jersey, and JAX-RS, ensuring seamless data exchange and integration with front-end technologies like AngularJS and ReactJS.
- Established secure API endpoints with OAuth1/2 for authentication and authorization, using Spring Security to safeguard application access.
- Crafted and managed APIs using Apigee Edge, enhancing API performance and security for mobile notifications and client data interactions.
- Implemented data persistence layers using Hibernate ORM with MySQL and Mongo DB, optimizing data storage and retrieval operations.
- Utilized Docker for containerized microservices deployment, improving application isolation and environment consistency.
- Designed and managed Kafka messaging queues for efficient message brokering and asynchronous communication between microservices.
- Managed build and release processes using Maven and Ant, ensuring consistent application builds and deployments.
- Embraced Test-Driven Development (TDD) methodologies, writing and executing unit tests in JUnit within the Eclipse IDE, and integrating continuous integration workflows with Jenkins.
- Deployed applications and RESTful services on the JBoss Application Server, actively involved in production support, maintenance, and troubleshooting to ensure application reliability and performance.

Java Developer **SIRIUS POINT, Bermuda, NY**

September 2019 – October 2021

- Responsibilities:
- Participated in all stages of the Software Development Life Cycle (SDLC), including analysis, design, development, and testing, to ensure efficient project progression.
- Designed and implemented N-tier client-server applications utilizing Model View Controller (MVC) architecture to enhance system scalability and maintainability.
- Employed core Java features such as Collections, Generics, Exception Handling, and various Design Patterns (e.g., Filter, Action, Business Delegate, Service Locator, DTOs, DAOs) to optimize application functionality and design.
- Utilized Hibernate for the persistence layer, creating POJOs and DAOs for efficient database operations, and integrated Hibernate Transaction Management, Batch Transactions, and caching to improve data processing efficiency.
- Implemented security measures including SSL encryption and role-based access controls to safeguard system data and user information.
- Leveraged JSON for lightweight data interchange between the server and applications, enhancing communication efficiency.
- Developed and maintained SOAP and RESTful web services within a microservices and SOA architecture, ensuring interoperability and modularity of web modules.
- Crafted dynamic and responsive user interfaces using JSP, Spring Tag Libraries, Ajax, JavaScript, CSS, and HTML, focusing on user experience and application responsiveness.
- Established web service communication using WSDL and Apache Axis, facilitating seamless service integration and interaction.
- Managed application deployment on the Apache Tomcat server and utilized Maven for build and deployment processes, streamlining application delivery.
- Ensured code quality and maintainability through regular code reviews, adherence to Java coding standards, and implementation of Log4J for logging and debugging.
- Conducted comprehensive testing using JUnit, including writing and executing test cases, to maintain high software quality and reliability.
- Participated in Agile and Waterfall development environments, contributing to continuous improvement and efficient SDLC management.

- • Applied J2EE design patterns and utilized JDBC for database connectivity, enhancing application structure and interaction.
- • Utilized ANT scripts for deployment and Firebug for issue tracking, ensuring efficient deployment and troubleshooting processes.

EDUCATION

- • **Bachelor of Computer Science at Concord University**
Concord University
-
