SKILLS SUMMARY

Programming Languages: Java, JavaScript, Typescript, .NET, Python, C++, GraphQL, SQL, HTML, CSS

Frameworks/Tools: React, Angular, Node.js, ES6, Spring, Spring Boot, Bootstrap, MongoDB, REST API, AWS, Docker, MySQL, Linux, Git, Jenkins, Maven, Postman, VS code, Xcode

WORKING EXPERIENCE

VTEX – Software Engineer

Oct 2021 - Mar 2023

- Collaborated with cross-functional teams to develop and deploy robust and scalable full stack software solutions for B2C and B2B applications, leveraging React, TypeScript, JavaScript, .NET, C#, Node, and GraphQL.
- Pioneered Klarna Payment Connector for North America region and introduced the region selector feature.
- Enhanced inventory accuracy of the Lightspeed Integration App by 80% in Unit testing through implementing efficient syncing and management systems, and features for reprocess incorrect orders.
- Upgraded Quick Order app by integrating intelligent search to restrict product access according to sales channels, and IS auto-complete feature, serving over 1,000 customers and improving user experience.
- Optimized large scope B2B Suite, implementing duplicate request checking and merging, sale channels binding for storefront permissions, and limitation validation for continuous improvement.
- Addressed daily support issues following Agile methodology, working extensively on team apps including Wishlist, Review, Quick Order, B2B Organization, Order Quote, Lightspeed Integration, and Yotpo Integration.

Capital One – Java Developer

Aug 2021 - Oct 2021

- Contributed to AWS EMR development efforts by building and implementing new features such as cluster termination and validation, also EMR steps functionality which reduced Application load times by 40%.
- Applied core Java concepts like Multi-Threading and Exception Handling to implement multiple features.
- Utilized Spring Core annotations such as Spring DI for Dependency Injection and Spring MVC for REST APIs.

United Tech Project Foundation – Software Engineer

Aug 2020 - May 2021

- Developed frontend using Angular and Bootstrap, built backend and REST API using Node.js and Express.
- Utilized MongoDB for databases construction, backend seed script design, and db connection w/Mongoose.
- Created and managed Docker images, deploy Docker containers on AWS EC2 for hosting static web pages.
- Participated in developing middleware for token verification using JWT and session storage management.

EDUCATION

University of Wisconsin-Madison

May 2020

Bachelor of Science in Computer Science, Mathematics Certificate

PROJECTS

EcoShopper

Oct 2023 - Jan 2024

- Developed the e-commerce platform using React and Python with Flask, hosted on AWS Elastic Beanstalk for scalability, focusing on sustainable products with efficient data management via Amazon RDS.
- Implemented front-end caching with Redux to cut loading times by 50%, and optimizing database queries.
- Enhanced user experience with AWS CloudFront for fast and efficient global delivery of static assets.

Newsfeed

Apr 2023 - July 2023

- Collaborated in development of a news application with React, various AWS services, public APIs, etc.
- Implemented advanced algorithms and AI for news summarization, label detection, content extraction, and personalized news recommendations based on user's reading habits.
