Summary Statement

Results-driven DevOps Engineer / SRE With over 5 years of experience in multi-cloud DevOps (AWS, Azure, GGP), I've led the rollouts of scalable infrastructure, orchestrated Kubernetes (EKS/AKS) deployments, and automated CI/CD using Jenkins, Python, Shell scripting, GitHub Actions, and ArgoCD. I built IaC frameworks in Terraform, streamlined deployment pipelines, and introduced observability via Prometheus and Grafana, cutting downtime and speeding up releases. I also have expertise in MLOps, Agentic AI and AI prompts.

Education

University of the Cumberland

MSc, Information Technology

May 2023 - May 2025

American International University-Bangladesh

BSc, Computer Science & Engineering

Sep 2017 - Dec 2021

EXPERIENCE

i2Data Systems

DevOps Engineer

May 2023 - Present

- Designed and managed AWS/Azure cloud-based infrastructure, implementing Terraform for IaC, reducing manual provisioning by 80%.
- Built and optimized Kubernetes clusters (EKS/AKS), ensuring 99.99% uptime with auto-scaling (HPA/VPA) and monitoring via Prometheus & Grafana.
- Implemented ArgoCD for GitOps, automating deployment workflows and reducing errors by 40%.
- Developed CI/CD pipelines using Jenkins, Harness & GitHub Actions, improving deployment speed by 35%.
- Integrated Grafana with Prometheus, Loki, and CloudWatch for centralized log and metric visualization.
- Designed and implemented CI/CD pipelines for Salesforce deployments using Gearset, Copado, Jenkins, and GitHub Actions.
- Administered Unix/Linux environments, performing routine maintenance, patching, and performance tuning to ensure 99.9% up-time.
- Managed and optimized large-scale relational databases using advanced SQL queries, enhancing data retrieval performance by 30%.
- Set up system metrics collection (CPU, memory, disk, network) across Kubernetes nodes and EC2 instances using Datadog agents.
- Integrated Datadog with GitHub Actions and Jenkins to visualize build/deployment metrics and release health.
- Used Splunk for tracking authentication events, correlating logs for intrusion detection, and supporting compliance needs (e.g., SOC2, HIPAA).
- Implemented end-to-end MLOps pipelines integrating CI/CD practices to automate model training, testing, and deployment using Jenkins, Argo Workflows.
- Optimized GPU-enabled infrastructure on AWS (Sagemaker, AKS, EKS, EC2) to support scalable AI/ML workloads with auto-scaling and spot instance savings.
- **FinOps tools like Kubecost** K8s cost monitoring by namespace/workload, **Grafana** Add cost + usage metrics into dashboards.

GrameenPhone

Jr. Cloud Engineer

Feb 2020 - May 2021

- Managed AWS/Azure cloud infrastructure, optimizing cloud resource usage and costs & Implemented GitLab CI/CD pipelines, automating software deployment and testing.
- Assisted in cloud security & compliance efforts, enforcing IAM policies and firewall rules.

American International University-Bangladesh

Jr DevOps Engineer

Jun 2021 - Dec 2022

- Designed and maintained GitOps-based pipelines using GitHub Actions and ArgoCD, enabling continuous delivery of containerized microservices across EKS and AKS clusters.
- Implement GitLab CI/CD platform & provide hands-on engineering, technical support.

CERTIFICATIONS

- **Certified Kubernetes Application Developer (CKAD):**Linux Foundation
- **AWS Solutions Architect - Associate:**AWS
- **Microsoft Certified: DevOps Engineer Expert:**AZURE 400
- **Microsoft Certified: Azure Administrator Associate:**AZURE 104

Projects & Achievements

- Optimized AWS EKS, Azure AKS workloads, reducing infrastructure costs by 30%.
- Developed serverless automation with AWS Lambda, improving system efficiency.
