

Meron Tessema

Power BI Developer

EVERETT, WA

425-340-4154

meroncherue@gmail.com

Summary

Experienced Business Intelligence professional with 5+ years of hands-on expertise. Proven track record in delivering a wide range of reports across diverse projects and domains. Skilled in both Production Support and new development using various BI tools. Adept at collaborating with medium to large teams, on-site and offshore, for support and development activities. Proficient in SAP BI, Tableau, MS Power BI, and other reporting tools. Strong command of SQL, DAX, and report development languages. In-depth knowledge of Data Modeling Concepts, including snowflake and multi-star schemas. Skilled in creating reports within Power BI's preview portal via SSAS Tabular Analysis connector. Proficient in data cleaning, validation, and using DAX, Power Query, and Power Pivot for analysis. Extensive experience across all aspects of SQL Server development, from tables and functions to stored procedures, triggers, and data integrity maintenance.

Skills:

SQL Server Tools:	SQL Server Management Studio, Enterprise Manager, Query Analyzer, SQL Profiler, Database Engine Tuning Advisor, BI Development Studio, SSIS, SSRS, Data Transformation Services, Power BI.
RDBMS:	SQL Server 2008/2005/2000, 7.0, MS-Access.
Languages:	T-SQL, PL/SQL
Data Modeling:	MS Office Visio 2003/2007
Operating System:	Microsoft Windows/Advanced Server.
Methodologies:	Star Schema, Snow-Flake Model, Database Design and Normalization.

Professional Experience:

Verizon - New York, NY – *Power BI Developer*

Feb 2021 – PRESENT

- Collaborating closely with business analysts, developers, DBAs, and testers to gather requirements and execute tasks, ensuring seamless project delivery.
- Demonstrating expertise in Agile methodologies, encompassing the complete project life cycle from initiation to implementation.

- Skillfully collecting and documenting Power BI application requirements from business users, translating them into actionable insights.
- Design, develop, and implement Power BI reports, showcasing a deep understanding of data visualization principles.
- Proficiently create Dashboards and Scoreboards within Power BI, leveraging diverse data sources including SQL Server, Excel, Web, and Text/CSV.
- Utilize Power Query in Power BI to perform data operations, fetching information from various files and executing ETL processes for tabular data.
- Craft Monthly Project KPIs, Identity Compliance, and Audit Reports in Interactive Dashboards/Storyboards using Tableau and Power BI.
- Employ DAX to create calculated columns and measures in Power Pivot (Power BI), enhancing data analysis precision.
- Leveraging various Data Visualizations within Power BI, publishing reports to Power BI Services for wider accessibility.
- Developing diverse reports including matrix, chart, parameterized, drill-down, and drill-through reports.
- Skillfully deploy and upload SSRS reports for end users, actively participating in dashboard enhancements and modifications.
- Creating SSIS packages utilizing control flow, data flow, and error handling tasks, integrating different data sources through SQL Server Integration Services.
- Proficiently employ various containers within control flow tasks, such as For Loop, For Each Loop, and Sequence.

TD Bank- Cherry Hill, NJ - *SQL SERVER/POWER BI Developer*

April 2019 - February 2021

- Proficiently designed and developed a variety of reports, including matrix, chart, parameterized, drill-down, and drill-through reports.
- Successfully deployed and uploaded SSRS reports for end users, actively contributing to dashboard enhancements and modifications.
- Created SSIS packages with control flow, data flow, error handling tasks, and diverse data sources, leveraging SQL Server Integration Services.
- Expertly utilized control flow tasks such as For Loop, For Each Loop, and Sequence within various containers.
- Skillfully crafted dynamic SSIS packages with variables and expressions, proficiently loading data from Excel, flat files, XML, and different databases, including SQL databases.
- Created and administered databases on Azure, installing SQL 2014, and effectively loading data using SSIS from other virtual machines.
- Proficiently handled external and internal table creation in Azure SQL Data Warehouse, using stored procedures to move data between tables.
- Implemented data cleansing, data security, data profiling, and data monitoring processes with precision.
- Designed SQL SSIS Packages to extract data from diverse sources, employing transformations such as Data Conversion, Look Up, Conditional Split, and more for Data Analysis and Reporting.
- Successfully upgraded SQL servers to newer versions, applying service packs and hotfixes as needed.

- Expertly scheduled and maintained nightly and weekly data loads through the creation of job tasks.
- Skillfully identified upstream data sources using SSIS packages and imported required tables into intake databases.
- Developed complex SSIS packages with meticulous control and data flow elements, including error handling.
- Enhanced and deployed SSIS packages from development to production servers.
- Utilized SSIS (SQL Server Integration Services) to establish a robust Data Warehouse for reporting purposes.

Environment: MS SQL Server, SQL Server Data Tools (SSIS), Power BI, Azure

Burlington – Burlington, NJ – *SQL Server Administrator*

November 2017 - April 2019

- Played a pivotal role in capacity planning for MS SQL Servers, optimizing server resources and performance.
- Implemented and maintained robust database security protocols, safeguarding sensitive data, and maintaining compliance.
- Collaborated with clients to understand requirements, leading to effective database design and application architecture.
- Orchestrated capacity specification planning for new database servers, ensuring efficient resource allocation.
- Utilized SQL Server Enterprise Manager and Query Analyzer for comprehensive administration and management of SQL Server databases.
- Leveraged SQL Server System Tables to retrieve essential metadata, enhancing insights into database structures.
- Developed a multitude of stored procedures and triggers tailored to meet clients' specific requirements.
- Conducted DBCC consistency checks, diagnosing and rectifying data corruption issues within application databases.
- Engineered new job processes, innovative database maintenance plans, and efficient DTS packages, while fine-tuning existing processes for enhanced performance.
- Demonstrated exceptional troubleshooting skills to rapidly identify and resolve production downtime issues.
- Devised and implemented scheduled maintenance and backup procedures, contributing to a robust disaster recovery strategy.
- Monitored and managed the execution of MS SQL Server jobs, ensuring optimal performance and timely completion.

Environment: SQL Server, Transact-SQL, Enterprise Manager, Query Analyzer, Oracle, PL/SQL.

Education:

Bachelor's Degree – Accounting | Hawassa University
