Summary

AI-Driven Data Analyst with expertise in SQL, Python, Excel, and Power BI, specializing in EDA, KPI design, forecasting, FP&A analytics, and business intelligence. Experienced in ETL pipelines, data modeling, and data warehousing to deliver scalable, production-ready analytics solutions. Leverages Generative AI and machine learning techniques to automate reporting, enhance forecast accuracy, and accelerate insight generation. Proven ability to translate complex business requirements into executive dashboards, financial insights, and data-driven decisions across finance and operations.

Skills

Programming & Querying: SQL (Joins, CTEs, Window Functions), Python (NumPy, Pandas).

Data Visualization & BI: Advanced MS Excel, Power BI (DAX, Data Modeling, Interactive Dashboards), Streamlit, Matplotlib.

Analytics & Modeling: Data Modeling, Time Intelligence, KPI Development, Forecasting, ETL Workflows, Data Warehousing.

Analytical Abilities: Data Cleaning, Exploratory Data Analysis (EDA), Descriptive Statistics, Generative AI-Assisted Analytics, Automated Reporting, AI-Driven Productivity Optimization, Decision-Support Analysis.

Experience

Data Analytics Intern

2025 (Completed)

Deloitte Australia – Forage Virtual Internship (Remote)

- Translated business requirements into 5+ stakeholder-ready dashboards and analytical reports, enabling data-driven decisions that reduced reporting turnaround time by ~30% for executive-level use cases.
- Performed data cleaning, transformation, and data modelling to generate actionable business insights from raw datasets.
- Built interactive dashboards and analytical reports to uncover insights and support strategic business initiatives.

GenAI-Powered Data Analytics Intern

2025 (Completed)

Tata Group – Forage Virtual Internship (Remote)

- Conducted exploratory data analysis (EDA) on 100K+ records and applied Generative AI-assisted predictive analytics, improving forecast accuracy by ~15–20% and supporting risk-informed decision-making.
- Developed an AI-driven financial risk and collections strategy to improve forecasting and decision support.
- Designed a scalable, ethical, no-code predictive framework for enterprise-ready analytics implementation.

Projects

FP&A Financial Dashboard | Excel, Power BI

- Developed an enterprise-grade FP&A dashboard tracking revenue, expenses, budgets, variance, and KPIs across multiple departments.
- Implemented star-schema data models, DAX measures, and Time Intelligence to deliver accurate executive reporting.
- Designed multi-page interactive dashboards with slicers, filters, and professional visualizations for actionable business insights.
- Collaborated with cross-functional teams to align KPIs and reporting metrics, ensuring dashboards aligned with organizational KPIs and strategic goals.

AI Financial Intelligence Platform | Python, Streamlit

- Built a Generative AI-powered platform automating data cleaning, KPI generation, predictive forecasting, and reporting for FP&A teams.
- Created interactive Streamlit dashboards with EDA, drill-down KPIs, scenario modeling, and AI-generated strategic insights.
- Delivered scalable solutions reducing data prep and reporting time by 80–95%, enhancing data-driven decision-making efficiency.
- Integrated real-time data pipelines and AI-driven alerts to proactively monitor financial metrics and support timely executive decisions.

Certifications

- Power BI for Beginners – Microsoft:** Completed hands-on training in dashboard creation, data modeling, and data visualization using Power BI.
- Data Analytics with Generative AI – Simplilearn:** Gained practical experience in AI-driven data cleaning, analysis, and actionable insights generation.
- Machine Learning Using Python – Simplilearn:** Acquired skills in predictive modeling, regression, classification, and end-to-end machine learning workflow implementation using Python.

Education

BS Software Engineering

2025

National University of Computer and Emerging Sciences, CFD
