

ANANTA KANAKA NAGA VENKATA SAINADH

Texas, USA | 737-315-1857 | [LinkedIn](#) | aknsainadh24@gmail.com

SUMMARY

Full-stack developer with 4+ years of experience designing and deploying AI-integrated web applications. Skilled in building scalable, data-driven systems that combine machine learning models with modern backend architectures. Proven success in improving system efficiency by 35%, reducing manual reporting by 50%, and developing production-grade LLM and analytics solutions on AWS. Experienced in translating research models into reliable, enterprise-ready applications with measurable results.

SKILLS

Languages: Python, Java, JavaScript (ES6+), TypeScript, SQL

Backend Frameworks: Spring Boot, FastAPI, Node.js, Express.js, Flask, NestJS

Frontend Technologies: React.js, Next.js, Angular, Redux, HTML5, CSS3, Tailwind CSS, Bootstrap

AI & ML Tools: LangChain, Hugging Face Transformers, TensorFlow, PyTorch, Scikit-learn, NLP (BERT, GPT, T5), OpenAI APIs

Cloud & DevOps: AWS (SageMaker, EC2, Lambda, CloudFront, S3), Azure Functions, Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, CI/CD

Databases: PostgreSQL, MySQL, MongoDB, Redis, CosmosDB, SQL Optimization

MLOps & Data Pipelines: MLflow, Airflow, Pandas, NumPy, Spark, Model Deployment, Data Integration

Other Tools: Git, JIRA, Confluence, Swagger, Postman, Prometheus, Grafana

Methodologies: Agile (Scrum/Kanban), TDD, Code Reviews, Continuous Deployment

PROFESSIONAL EXPERIENCE

Full Stack Developer (AI/ML Integration) | Wayfair, USA

December 2024 - Current

- Engineered a real-time analytics platform merging LLM-powered summarization with financial datasets, cutting manual reporting by 50%.
- Integrated GPT-4 and LangChain for automated decision support, improving report precision and reducing delivery time by 40%.
- Developed microservice-based REST APIs with Spring Boot and Hibernate to deliver ML insights to front-end dashboards.
- Architected RAG (Retrieval-Augmented Generation) pipelines that enhanced data query accuracy by 20%.
- Refactored Java and FastAPI services for concurrent execution, boosting throughput by 35%.
- Automated model deployment using AWS SageMaker and Docker, streamlining delivery pipelines and minimizing downtime.
- Collaborated with data scientists and frontend teams to transition ML prototypes into production-ready systems.

Software Engineer (AI/ML & Full Stack Development) | Mindtree, India

August 2020 - July 2023

- Designed and deployed predictive ML models for customer churn and engagement analytics, improving retention by 25%.
- Implemented Angular + Flask dashboards visualizing real-time KPIs, boosting decision-making efficiency for marketing teams.
- Created high-volume data pipelines in Python and PostgreSQL, processing millions of transactions with 99% accuracy.
- Built a predictive maintenance framework using Random Forest and XGBoost, reducing downtime by 30% in telecom operations.
- Streamlined deployments through CI/CD workflows with Docker, Jenkins, and AWS EC2 for scalable, reliable ML services.
- Partnered with QA and DevOps to improve system stability, security, and deployment frequency.
- Mentored junior engineers in backend automation, REST API design, and model integration best practices.

Projects

Forensic Image Scanner and Identification

- Engineered a CNN-based system to detect manipulations in scanned document images and identify scanner origins from 64×64 sub-images.
- Created a zig-zag patch extraction pipeline to enhance robustness on limited training data.
- Achieved 94% classification accuracy using a lightweight TensorFlow model with residual blocks and SoftMax layers.
- Presented at the Texas State University research showcase on applied deep learning for forensics.

Retail Sales Performance Dashboard

- Processed and analyzed 50,000+ transaction records using Python and SQL for KPI generation and trend forecasting.
- Defined and automated key business metrics, including profit margin, CLV, and product performance.
- Built an interactive Power BI dashboard with drill-downs and dynamic filters, reducing analysis time by 20%.
- Delivered data visibility improvements that helped executives make faster, insight-driven sales decisions.

EDUCATION

Texas State University, USA

Master of Science in Computer Science

August 2023 - May 2025
