

SUMMARY

Dynamic Solutions Engineer with a proven track record in business application support, data analysis, and IT technical solutions. Skilled in troubleshooting complex systems, optimizing workflows, and implementing scalable technology solutions to enhance business operations. Adept at bridging the gap between technical teams and business stakeholders, ensuring seamless system integration and data-driven decision-making. Passionate about leveraging automation, analytics, and innovative IT strategies to improve efficiency and drive business growth.

SKILLS

- Web Publishing using HTML
- UNIX
- Linux
- Z/OS Mainframe
- IBM WebSphere MQ
- Integration Bus
- Sterling Integrator
- Application Server
- Cisco AppDynamics
- C++
- Java
- Visual Basic
- Microsoft Office
- Microsoft Windows
- Networking Solutions
- LAN
- WAN
- Databases
- PowerShell Script
- SAP
- Access
- WebLogic
- SQL
- Troubleshooting
- Hardware
- Software
- Networking Devices
- Secure Socket Layer encryption
- Transport Layer Security
- Detail-oriented
- Analytical skills
- Multitask
- Customer Service
- Quick Learning
- Team Environment
- Project Management
- Agile & Adaptability
- Cross-Functional Collaboration
- DevOps & CI/CD Pipelines
- Apache TomCat

EXPERIENCE

Solutions Engineer / Virtual Service Operations - Remote

October 2021 – February 2025

- WebSphere MQ and Message Broker Solutions – Utilize UNIX, Linux, and Windows operating systems to support WebSphere MQ and Message Broker. Support includes, but not limited to, data migration, installing, upgrading, problem-solving, and ERP maintenance. When necessary, use of Secure Socket Layer (SSL) certification and encryption is also employed.
- Cloud & AI-Powered Architecture – Design and implement scalable, cloud-native, and AI-driven solutions using technologies like Amazon Web Services, Azure, Kubernetes, and API integrations to drive digital transformation.
- Customer-Centric Problem Solving – Collaborate with stakeholders to identify challenges, optimize workflows with automation and DevOps methodologies, and enhance operational efficiency. Utilize ServiceNow to track and manage change and incident management tickets submitted to support team. Achieved Service Level Agreement standards on 98% of tickets submitted.
- Data-Driven Optimization & Security – Leverage analytics, machine learning, and cybersecurity best practices to continuously improve solution performance, user experience, and enterprise resilience.

Disability Examiner/ Sedgwick Claims Management - Dubuque, IA

August 2020 – October 2021

- Comprehensive Medical Evaluation – A Disability Exam is a structured medical assessment conducted by a certified healthcare provider to evaluate an individual's physical and/or mental impairments. It focuses on functional limitations, occupational impact, and long-term prognosis, ensuring compliance with regulatory standards for disability determinations.
- Evidence-Based Assessment – Utilizing data-driven diagnostics, clinical guidelines, and standardized evaluation protocols, the exam provides objective medical evidence to support disability claims. AI-driven medical documentation and electronic health records (EHRs) enhance the accuracy and efficiency of reporting.

Workforce Readiness & Eligibility – The exam determines an individual's ability to perform essential job functions within their industry, incorporating insights from ergonomic analysis, vocational rehabilitation strategies, and ADA (Americans with Disabilities Act) compliance to facilitate workplace accommodations and return-to-work planning.	
Middleware Support / IBM - Dubuque, IA	<i>June 2012 – August 2020</i>
- Middleware Infrastructure Management & Optimization – Administer, configure, and optimize middleware platforms such as Apache Kafka, WebLogic, IBM MQ, WebSphere Application Server, and Red Hat JBoss to ensure seamless application integration, scalability, and high availability. - Incident Resolution & Performance Tuning – Troubleshoot middleware-related issues, perform root cause analysis, and implement proactive monitoring using Dynatrace, Splunk, and Prometheus to enhance system reliability and performance. - Security & Compliance in Middleware Environments. Perform change management tasks as assigned by client request. - Enforce best practices for API gateways, authentication protocols (OAuth, SAML), and encryption standards (TLS, SSL) to ensure secure communication between distributed applications and compliance with industry standards (ISO 27001, SOC 2, HIPAA)	
Production Planner / Hodge Company - Dubuque, IA	<i>October 2010 – June 2012</i>
- Production Workflow Optimization: Develop and implement efficient production schedules to maximize resource utilization, minimize downtime, and align with lean manufacturing principles, ensuring seamless supply chain coordination and on-time product delivery. - Demand Forecasting & Inventory Management: Leverage data analytics and ERP systems to analyze market trends, anticipate production demands, and optimize just-in-time inventory management, reducing waste and improving operational efficiency.	
Cable Technician / Tek Systems - Cedar Rapids, IA	<i>May 2009 – August 2009</i>
- Install, Maintain, and Troubleshoot Network Cabling Systems – Perform structured cabling installations, including fiber-optics and coaxial cables, ensuring optimal connectivity for high-speed data transmission, Voice-over-Internet-Protocol, and IPTV services. Diagnose and resolve connectivity issues using network analyzers and advanced troubleshooting techniques. - Optimize Network Performance and Ensure Compliance – Configure and test broadband infrastructure to support seamless integration with IoT devices, cloud computing, and 5G networks. Adhere to industry standards such as BICSI and NEC regulations while implementing cybersecurity measures to protect data integrity.	
Transactions Analyst / Thermo-Fisher Scientific - Dubuque, IA	<i>December 2007 – January 2008</i>
- Financial Data Analysis & Reporting: Conducts in-depth analysis of transaction data, leveraging data visualization tools, financial modeling, and predictive analytics to identify trends, optimize processes, and ensure compliance with regulatory standards. - Process Optimization & Risk Mitigation: Monitors and reconciles financial transactions, utilizing automation tools, AI-driven insights, and risk assessment frameworks to enhance operational efficiency, reduce errors, and strengthen fraud prevention measures.	

EDUCATION AND TRAINING

Bachelor of Business Administration: Computer Information Systems
University of Dubuque - Dubuque, IA

- Graduated Cum Laude

Cloud Storage class
Kirkwood Community College

A+ Certification Preparation course
Kirkwood Community College

HONORS AND ACHIEVEMENTS

- ScrumAlliance Scrum Management Certification, May 2022
- IBM Wall of Fame Honoree, May 2014
- National Career Readiness Certificate Recipient, Silver Level, March 2013
- National Career Readiness Certificate Recipient, Gold Level, November 2009
- University of Dubuque Technical Excellence Award Recipient, July 2008
- McKesson Information Solutions Scholarship Recipient, May 2007
- American Legion Scholarship Recipient, September 2006
- Dean's List - University of Dubuque, April 2007
- University of Dubuque Presidential Scholarship Recipient, May 2007
- National Honor Society, January 2004
- Volunteer Work for St. Patrick's Church, February 2003, Epworth, IA
