

Python Developer

Name : Akhil | Contact : +1(913) 636 8745 | Email : akhilkalluri111@gmail.com | URL :

Professional Summary

- Having 4 years of experience as a Python Developer in IT Industry with proficiency in Design & Development of Python, GoLang, Java/J2EE, Django, flask projects.
- Proficient in Hadoop ecosystem technologies: HDFS, MapReduce, Hive, HBase, Spark.
- Experience in writing Sub Queries, Stored Procedures, Triggers, Cursors, and Functions on MySQL and PostgreSQL database.
- Experience in using python libraries like Beautiful Soup, NumPy, SciPy, matplotlib, NetworkX, MySQL db for database connectivity and IDEs like Sublime Text, Spyder, PyCharm.
- Experience in working with Python ORM Libraries including Django ORM, SQL Alchemy.
- Experienced in working with various Python IDE's using PyCharm, PyScripter, Spyder, PyStudio and PyDev.
- Having experienced in Agile Methodologies, Scrum stories and sprints experience in a Python based environment, along with data analytics, data wrangling and Excel data extracts.
- Cleaned data and processed third party spending data into maneuverable deliverables within specific formats with Excel macros and python libraries.
- Proven track record of developing interactive dashboards, optimizing data pipelines, and collaborating cross-functionally to deliver impactful solutions using Tableau and Snowflake.
- Experience in Developing Web Services (SOAP, RESTful) in Python using XML, JSON.
- Experienced in MVW frameworks like Django, Java Script, jQuery.
- Experience in developing web applications by following Model View Control (MVC) Architecture using server-side application Django. Proficient in building RESTful APIs using FastAPI framework.
- Hands on experience in Managing, developing, and designing a dashboard control panel for customers and Administrators using Django, HTML, CSS, JavaScript, Bootstrap, jQuery, JSON and RESTAPI.
- Experience on core java technology which includes Multithreading, JDBC, RMI, network programming.
- Experience working in WAMP (Windows, Apache, MYSQL, and Python/PHP) and LAMP (Linux, Apache, My SQL, and Python/PHP) Architecture. Extensive experience in implementation of the version control software SVN and GIT.
- Experience with Amazon Cloud EC2, Simple Storage Service S3 and Amazon SQS.
- Expertise in working with different databases like Oracle, MySQL, PostgreSQL and Good knowledge in using NoSQL database Cassandra and MongoDB.
- Experience with Design, code and debug operations reporting data analysis and web applications utilizing python.
- Experience with Docker, deployment of application inside software containers.
- Experience in implementing python alongside using various libraries such as matplotlib for charts and graphs, python-twitter, PySide, Pickle, Pandas data frame, network.
- Excellent working knowledge in UNIX and Linux shell environments using command line utilities.
- Have the ability to understand complex systems and be in command of the details to provide solutions.

TECHNICAL SKILLS:

Languages	Python, C++, GoLang, Java, SQL, Shell Script, PHP
Databases	MYSQL, PostgreSQL, Oracle, No-SQL databases, MongoDB, Cassandra.
Version Controls	Git and SVN.
Python libraries	Pandas, NumPy, Matplotlib, Pytables, SciPy, Flask, Beautiful soup, Bootstrap, jQuery, Scikit-learn, Seaborn, Pyspark
Web Servers	Apache Webserver, IIS, HTTP server, Web Logic, Jboss.
Operating System	Linux, Unix, Mac, and windows.
Reporting tools	Power BI, Tableau, MS-Word, and MS-PowerPoint
Cloud Technology	AWS, Azure
Web technologies	JSON, XML, HTML5, Angular JS, CSS/CSS3, JavaScript, jQuery, AJAX.
Frameworks	Django, Pyramid, Flask, CSS Bootstrap.
Technologies	HTML, CSS, JavaScript, jQuery, XML, Hadoop,CSV, AJAX, Angular JS, Excel, Text.
Methodologies	Agile, Waterfall and Scrum.

PROFESSIONAL EXPERIENCE:

Client: Huntington National Bank, Columbus, OH

Sep 2023 – present

Role: Python Developer

Responsibilities:

- Developed and deployed scalable web applications on Azure Cloud using services such as Azure App Service, Azure Functions, and Azure SQL Database.
- Implemented CI/CD pipelines with Azure DevOps to automate the deployment process, reducing deployment time.
- Built a RESTful backend system for CreditKarma using FastAPI, integrating with multiple microservices and ensuring high performance and scalability.
- Developed and maintained several web applications using React.js as the primary frontend framework.
- Implemented responsive and mobile-friendly user interfaces to ensure optimal user experience across various devices and screen sizes.
- Designed, developed, and maintained large-scale data processing pipelines using Hadoop ecosystem technologies such as HDFS, MapReduce, Hive, and HBase to ingest, transform, and analyze petabytes of structured and unstructured data.
- Performed statistical analysis using big data technologies like PySpark
- Integrated Hadoop ecosystem components with real-time data streaming platforms like Apache Kafka and Apache Flume to enable continuous data ingestion and processing.
- Participated in requirement gathering and analysis phase of the project in documenting the business requirements by conducting workshops/meetings with various business users.
- Write Python scripts to parse JSON documents and use python APIs for extracting data from multiple vendors. Leveraged pandas and numpy to perform data transformation and wrangling.
- Assessed and prioritized client feature requests.
- Developed and executed User Acceptance Testing portion of test plan and Regression testing by using data types like dictionaries, tuples and object-oriented concepts based inheritance features for making complex algorithms of networks.
- Performed application testing and bug fixing by using pdb to ensure efficient, testable and scalable code.
- Developed - Server-side logic and platform, statistical learning models, extremely responsive web apps, backend components to improve performance and responsiveness.
- Followed Agile Methodology and SCRUM Process and used JIRA for bug tracking and issue tracking.
- Resolved performance bottlenecks in Python Dash applications through code optimization and caching strategies.
- Developed and maintained robust shell scripts (Bash, Python) for automating routine system administration tasks, including file system management, user account provisioning, and system monitoring.
- Supported data engineering efforts by creating and maintaining ETL processes to extract, transform, and load data into Snowflake.
- Created visualizations and dashboards using Tableau to communicate insights to stakeholders.
- Maintained databases and developed ETL pipelines using SQL and Python to support analysis.

Environment: Python, React js, Shell script, Pandas, PyTest, Azure, Hadoop, XML, HTML, JSON, Rest API, Fast API Azure, Agile, Visual Studio, Spark, Tableau, Snowflake, Apache Kafka

Client: Nationwide, Houston, TX,

Dec 2022 – Sep 2023

Role: Python Developer

Responsibilities:

- Utilized Django Web Framework for creating web applications utilizing model view control engineering.
- Designed & implemented end-to-end data processing pipelines using AWS EMR & PySpark, handling terabytes of raw data daily.
- Manage datasets using Panda data frames and MySQL, queried MYSQL database queries from python using Python-MYSQL connector and MySQL dB package to retrieve information.
- Developed efficient ETL processes to extract, transform, and load data into Redshift data warehouse, optimizing query performance and reducing data latency
- Designed & Developed User Interface using front-end technologies like HTML, CSS, JavaScript, JQuery, AngularJS, Bootstrap and JSON. Implemented SQL Alchemy which is a python library for complete access over SQL.
- Worked with marketing company to built several Django, Pyramid, Flask and CherryPy applications. Worked on Django API's for accessing the database.
- Developing applications using RESTFUL architecture using Node.js and PHP as backend languages.
- Designed and maintained databases using Python and developed Python based API (RESTful Web Service) using Flask, SQL Alchemy and PostgreSQL. Created Automation test framework using Selenium.
- Integrated Electron applications with backend APIs and services using RESTful interfaces, enabling seamless data exchange and synchronization.

- Developed Terraform modules and templates for infrastructure provisioning on AWS, ensuring consistency and scalability across environments.
- Designed and implemented data processing workflows using Apache Airflow on AWS, automating complex ETL processes and orchestrating data pipelines efficiently.
- Leveraged Amazon Athena for interactive querying and analysis of large datasets stored in Amazon S3, enabling real-time insights and data-driven decision-making.
- Developed and optimized ETL jobs using AWS Glue, improving data ingestion and transformation processes while maintaining data quality and integrity.
- Involved in help for Amazon AWS S3 and RDS to have static/media documents and the information base into Amazon Cloud.
- Worked with AWS services like S3, ELB, EBS, Auto-Scaling, Route53, Storefront, IAM, Cloud Watch, RDS.
- Designed and implemented CI/CD pipelines using AWS CodePipeline and AWS CodeBuild, integrating with Amazon ECS for automated deployments.
- Utilized Tableau to design and develop interactive dashboards and reports that provided actionable insights into key performance metrics.
- Leveraged Snowflake to design and optimize data warehouse schemas, supporting complex analytical queries and reporting requirements.

Environment: Pyspark, Django, Election, Airflow, Glue, Athena, React js, Shell scripting, AWS, Bootstrap, XML, HTML, Angular.js, JSON, Rest, Mongo DB, Git, MySQL, Tableau, Agile, SQL Server, WebLogic, Rabbit MQ, Snowflake, Terraform, Docker, Kubernetes.

Client: Cybersoft, India

May 2021 – Jul 2022

Role: Python Developer

Responsibilities:

- Exposed to various phases of Software Development Life Cycle using Agile, Software development methodology. Followed agile for the entire project.
- Involved and fostered the UI of the site utilizing HTML, XHTML, AJAX, jQuery, Bootstrap, CSS, and JavaScript.
- Created whole frontend and backend modules utilizing Python on Django Web Framework.
- Planned and created information the executive's framework utilizing MySQL.
- Worked with the ceaseless combination and organizations utilizing Jenkins.
- Used Python based GUI components for the front-end functionality such as selection criteria.
- Worked in MySQL and NoSQL database on simple queries and writing Stored Procedures for normalization and renormalization.
- Containerized legacy applications using Docker and migrated them to Amazon ECS, improving deployment efficiency and resource utilization. Implemented a dynamic product using React components and Redux for state management.
- Created command line interface to build and deploy static sites with GoLang, incorporated AWS S3, CloudFront, Lambda, API Gateway reducing page load.
- Conducted performance tuning and optimization of Hadoop jobs and cluster configurations, identifying and resolving performance bottlenecks to improve overall system efficiency and resource utilization.
- Involved in SQL Queries, Stored Procedures, and Triggers Using Oracle, SQL, PL/SQL.
- Automated deployment and configuration management of cloud resources using Terraform, reducing manual effort.
- Integrated Snowflake with Terraform to automate the provisioning and configuration of data pipelines and ETL processes.
- Performed AWS Cloud organization overseeing EC2 cases, S3, Cloud Formation, SES and SNS administrations.
- Conveyed Microservices utilizing Docker holder utilizing Confidential EC2 compartment administration and utilizing AWS administrator console. Involved in using the CI/CD tools like Jenkins, Dockers and Kubernetes.
- Architected and implemented a real-time data streaming platform using Apache Kafka and Amazon Kinesis on AWS, enabling ingestion and processing of high-volume data streams from various sources.
- Leveraged Apache Airflow for workflow orchestration and management, ensuring reliable and scalable data processing and analysis. Designed and implemented ETL pipelines using PySpark on EMR, reducing data processing time.
- Integrated Amazon Athena for interactive querying and analysis of streaming data, enabling real-time insights and actionable intelligence.
- Assisted in the development of Tableau dashboards to visualize sales performance, customer demographics, and product trends.
- Optimized Redshift cluster performance by fine-tuning queries and implementing compression strategies, resulting in improved query response times.

Environment: Pyspark, React, JavaScript, Agile, Airflow, Athena, Terraform, PL/SQL, MySQL, HTML, Django, jQuery, AWS, NoSQL, Git, REST, Snowflake, Tableau, Jenkins, Active MQ, Grafana, PostgreSQL, Tomcat, Redshift, Jenkins, Dockers, Hadoop, Linux server, Kubernetes

Client: Advithri Technologies, India

Feb 2020 – May 2021

Role: Jr. Python Developer

Responsibilities:

- Developed views and templates with Python and Django to create a user-friendly website interface. managed, developed, and designed a dashboard control panel for customers and Administrators.
- Developed user interfaces using CSS, HTML, JavaScript, jQuery, JSON, bootstrap, Node.js, Angular.js.
- Worked intimately with leads in execution openness on assistance based, SOAP, RESTful advancements.
- Built and maintain a responsive and dynamic web page using GoLang as backend tool, HTLM, JavaScript, Angular.js as front end tools and PostgreSQL as a database.
- Designed and implementation done utilizing Core Java and C++ in Linux environment for Socket Programming and Thread libraries.
- Implemented Infrastructure as Code (IaC) practices using Terraform, enabling version-controlled, repeatable, and scalable infrastructure deployments.
- Used Django evolution and manual SQL modifications was able to modify Django models while retaining all data, while site was in production mode.
- Worked with the applications using Python –Django, Enaml and other python libraries like Panda, Beautiful Soap and NumPy that were based on principles of Test-Driven Development (TDD) and Parallel Programming.
- Implemented efficient data transformations and aggregations in PySpark to cleanse, enrich, and standardize raw data from various sources, ensuring data quality and integrity.
- Added support for Amazon AWS S3 and RDS to host static/media files and the database into Amazon Cloud.
- Working on AWS services and deployment services (Lambda) and RDS, Dynamo DB (NoSQL), Beanstalk and Jenkins.
- Developed, designed, and handled a dashboard control panel for customers and Administrators using Django and MySQL.
- Architected and implemented a real-time analytics dashboard using Apache Airflow and AWS services, providing stakeholders with actionable insights into key business metrics.
- Utilized Amazon Athena for ad-hoc querying and analysis of large-scale datasets stored in Amazon S3, enabling actionable insights and data-driven decision-making.
- Integrated third-party data sources and APIs to enrich and augment internal datasets, enabling comprehensive analysis and reporting capabilities.
- Designed and implemented data ingestion pipelines using AWS Glue, enabling automated extraction, transformation, and loading of structured and unstructured data.
- Used Git version tools and deployed project to Heroku.
- Developed Restful API's using Django and SQL, Alchemy data models as well as ensured code quality by writing unit tests using PyTest.

Environment: Python, GoLang, Airflow, Athena, JSON, AWS Glue, Git, LINUX, Django, Panda, Beautiful Soap, NumPy, SciPy, Pyspark, Pandas, Mongo DB, Rabbit MQ, SOAP, REST, MySQL, PyQuery, HTML, Terraform, Docker, Jenkins.
