Data Engineering professional with experience building data pipelines, analyzing data, and developing web apps and databases. Strong background in Full Stack Engineering, DevOps, and Cloud Computing. Fluent Spanish.

TECHNICAL SKILLS

Full Stack Developer:	Python (Flask, Django), Java, JavaScript (Node, Express), HTML/CSS, Bootstrap
Data Engineering:	DBT, Snowflake, SQL, Spark, Postgres, AWS, Redshift, Airflow, Pandas
	Databricks, Tableau, MongoDB, Web Scraping, Tableau, R, RegEx, Numpy
DevOps:	Linux, Docker, AWS EC2, S3, GitHub, Azure, Boto3, VBA

EDUCATION

Application Development Associate, North Seattle College	Mar 2025 (Expected)
Certificate in Data Science, University of Washington	Oct 2022 - Jun 2023
Data Engineering Career Course, Jigsaw Labs	Jun 2022 - Dec 2022
Data Analyst, Merit America - Google Data Analytics Certificate	Jan 2022 - May 2022
Junior Web Developer, Generation USA - W3Schools Certified JavaScript Developer	Oct 2021 - Apr 2022
Systems Engineering - Bachelor's Degree, Universidad de San Gil	Sep 2008

EXPERIENCE

Data Engineer Intern • NYC School Bus Umbrella Services (Remote) *Oct 2022 - Feb 2023*

- Developed Flask API that shows alternatives based on capacity, location, and other criteria when a bus is unavailable.
- Designed ETL pipeline to ingest data from both Google Sheets and external fleet management APIs to load into AWS RDS database and propose alternative buses. Built pipeline using adapter pattern in Python. Performed data modeling.

Data Engineer Fellow • Jigsaw Labs (Remote) *Jun 2022 - Dec 2022*

- Part of the six-month 400+ hours project-based course studying both backend and data engineering.
- *Backend:* Learned Python, SQL, and Flask, and implemented design patterns like MVC, the adapter pattern, and ORMs.
- *Data Engineering:* Implemented ELT patterns using Fivetran, Snowflake, and DBT, and ETL patterns using airflow and redshift, and S3. Deployed Flask API's and applications using Docker, AWS EC2, RDS, Redshift.
- Development of different data engineering and data pipeline projects,

Data Scientist Intern • DukeAI (Remote) *May 2022 - Jan 2023*

- An engineering intern for the startup extracts data from a freight trucker's shipping document for automated invoicing.
- Wrote roughly 15,000 lines of code to extract data points from 30 different document forms into JSON using Python.
- Selected to review the accuracy, readability, and performance code written by the rest of the team before deployment.
- Wrote code that evaluates the percentage of data captured by other developer's code, and automatically generates reports.
- The internship was extended from three months to nine months due to outstanding performance.

Frontend/WordPress Developer - Freelancer • Volar LLC, Seattle, WA *Jan 2021 - Apr 2022*

- Web developer building various websites in HTML, CSS, Bootstrap, JavaScript, Shopify, and WordPress.

Administrative and Logistics Superintendent • Perenco Oil Company, Colombia *May 2004 - Apr 2015*

- Headed the administrative and logistics department which supported the company's operation.
- Spearheaded effort to track the entire fleet of vehicles and logistics resources in a relational database and dashboard.
- Developing analyses and reports using analytical tools. Developing the company's maintenance database with WebApp.
