SUMMARY: Analytically driven MS in Business Analytics graduate with 3+ years of experience in data analytics, operations, and project management. Skilled in statistical analysis, predictive modeling, and data visualization to deliver actionable insights and solve business problems. Adept in cross-functional collaboration and fast-paced environments, with a proven ability to optimize processes, streamline operations, and communicate insights effectively. Passionate about using analytics to drive data-informed solutions that enhance efficiency and business outcomes.

WORK EXPERIENCE

Seasons Healthcare Limited

March 2022 – May 2023

Junior Analyst

- Improved vaccine stock traceability by **42%** and reduced inventory reconciliation time by **35%** by standardizing data collection across manufacturing and distribution sites, enhancing batch-level tracking, and optimizing supply chain workflows through data-driven analysis.
- Developed and implemented **interactive dashboards** to monitor stock levels, batch expirations, and distribution metrics across multiple facilities, enabling real-time visibility and **boosting supply chain responsiveness by 20%** through proactive decision-making.
- Reduced logistical delays by **25%** and manual data errors by **40%** by analyzing vaccine production and distribution data, identifying operational bottlenecks, and integrating data systems to improve process efficiency and reliability.
- Analysed vaccine demand patterns and production trends to optimize manufacturing schedules, reducing surplus inventory by **20%** and preventing stockouts of critical batches.

Caddell Construction Co DE LLC

November 2020 – February 2022

Operations & Logistics Analyst

- Played a key role in resolving complex **shipment control and documentation issues** for shipments valued at **\$70 million** during the construction of the **New U.S. Consulate in Hyderabad, India**, ensuring timely delivery of critical materials and regulatory compliance.
- Acted as a liaison between **government agencies and project managers**, expediting shipment clearances and improving overall project completion rates by **18%**.
- Served as interim department manager for **eight months**, designing **cost-effective tracking systems** that improved transparency in material movement and reduced project expenditures by **\$20 million**.
- Conducted **data-driven analysis** of supply delays and transportation inefficiencies, recommending process automation and KPI monitoring dashboards that enhanced operational visibility and delivery accuracy.

Opulence Mutually Aided Co-op Thrift & Credit Society

July 2019 – October 2020

HR & Admin Manager

- Led the transition to **paperless operations**, cutting administrative costs by **10%** and labor costs by **30%** through workflow digitization.
- Spearheaded **recruitment and onboarding initiatives**, increasing hiring efficiency by **34%** and enhancing employee retention through engagement programs.
- Developed **employee transition plans** for remote work, ensuring seamless business continuity during the 2020 lockdown.
- Introduced a **performance review and training framework** that standardized evaluation metrics and improved employee productivity and job satisfaction.

PROJECTS

- Analyzing Purchase Frequency Causality Among Amazon Consumers:** Implemented a comprehensive R-based analysis to identify key drivers of Amazon shopping frequency, including product choice, browsing behavior, and purchase history. Generated actionable insights to support targeted interventions and personalized marketing that improve customer engagement and revenue consistency.
- Predictive Insights - Optimizing Hotel Reservations:** Led a successful collaboration leveraging R programming to implement logistic regression, random forest, CART, and k-means models in R to forecast hotel reservation cancellations with high accuracy. Performed data imputation, winsorization, and rigorous train-test partitioning to ensure robust predictive performance and support revenue optimization.
- Volatility and Density Forecasting Analysis for Cryptocurrency Returns:** Utilized GARCH and Beta-t-EGARCH models in GAUSS and R to analyze volatility and density forecasts for Bitcoin, Ethereum, and Litecoin. Found Beta-t-EGARCH delivered consistently superior accuracy, enhancing investment decision-making and risk management in volatile crypto markets.

SKILLS

Databases & Tools:

SQL • MySQL • PostgreSQL • Power BI • Tableau • Domo • Python • R • Data Validation Tools • Snowflake • Tableau • Power BI • Domo

Data Analytics & Reporting:

ETL / ELT • Data Reconciliation • Dashboard Design • Exception Handling • KPI Monitoring • Report Automation • Query Optimization

Project & Collaboration Tools:

Agile Methodology • Jira • Microsoft Office Suite (Excel, PowerPoint, Word, Visio, Teams, SharePoint) • Data Quality Review • Version Control • Process Documentation

EDUCATION

Mercer University - Atlanta, GA

May 2025

MS in Business Analytics

Summa Cum Laude | Beta Gamma Sigma (Top 1% – MSBA Cohort)

CERTIFICATIONS

- Lean Six Sigma Yellow Belt – Process Improvement & Operational Efficiency
