SUMMARY

Professional software engineer with experience in full stack application development in Python and Java and various other languages seeking a high impact role within the technology industry.

WORK EXPERIENCE

Realty Data, Application Developer

January 2023 – Present

Remote

Developed Java Spring application for displaying real estate data stored in Oracle database and generating reports for real estate professionals and agencies. Utilized Spring MVC (Spring boot) framework for Java microservices and REST API development creating restful web services. Developed REST endpoints and CRUD operations for performing data operations. Integrated testing using Implemented integration testing and unit testing with JUnit. API development using Swagger and Postman. Generated front-end components using Angular. Performed full-stack development using IntelliJ IDEA. Hosted Application in AWS Virtual Private Cloud utilizing services such as EC2, S3, RDS, and Lambda for deploying and managing cloud-based solutions. Used AWS CloudFormation templates to provision and configure AWS resources and set up monitoring and logging solutions using AWS CloudWatch to monitor application performance, track system metrics, and manage log files. Performed containerization using Amazon EKS and orchestration using Terraform.

Bank of America, Application Programmer (Contract)

NYC, NY

April 2022 – October 2022

FX Cash – US

Developed trading lifecycle services on Bank of America's trading platform, Quartz. Improved business workflow with automation of post-trade processing and reporting for trading desk, retrieving data from the Sandra database. Enhanced business user experience with creation of a GUI for user-entered trade data. Designed unit tests, fixed bugs, and optimized performance and functionality of existing scripts using Python 3.8. Performed Agile development in bi-weekly sprints.

Morgan Stanley, Technology Associate

NYC, NY

August 2020 – March 2022

Enterprise Computing Services

Developed Confluent Kafka as a service application for internal teams: Utilized Spring MVC (Spring boot) framework for Java microservices and REST API development creating restful web services. Developed REST endpoints and CRUD operations for performing data operations. Created and fine-tuned components in service layer. Implemented integration testing and unit testing with JUnit. Stored data in MongoDB clusters. Configured Kafka metadata (Bootstrap servers, Cluster, Topic, Consumer Groups, Application Team) utilizing Java Spring boot. API development using Swagger and Postman. Generated front-end components using Angular. Performed full-stack development in Eclipse environment. Hosted Application in AWS Virtual Private Cloud utilizing services such as EC2, S3, RDS, and Lambda for deploying and managing cloud-based solutions. Used AWS CloudFormation templates to provision and configure AWS resources and set up monitoring and logging solutions using AWS CloudWatch to monitor application performance, track system metrics, and manage log files. Performed containerization using Amazon EKS.

Developed Morgan Stanley in-house file transfer service responsible for secure file transfer (SFTP, FTP), maintaining MQ messages, validator and request metadata mapping, job prioritization and throttling, job execution service, file conversions, virus scanning, logging, content pub/sub in Python 3 in Linux environment.

Used CI/CD tool Jenkins and code integration with Bitbucket. Performed Agile development in bi-weekly sprints.

Morgan Stanley, Summer Technology Analyst NYC, NY

June 2019 – August 2019

Wealth Management Lending Products and Services

Participated in the development of the new SBL (Security Based Lending) LAL (Liquid Access Line) origination model. The objective of the new origination model is to support Morgan Stanley to increase loan origination through enhanced targeting and identifying key relationships between customer behavior and LAL origination outcomes. I was responsible for model calibration and parameter estimation. I extracted historical data from tables and implemented python with scikit-learn decision tree for loan origination prediction. I generated queries for XML scripts based on clients' requirements and eligibilities to filter targeting for loan application requests. Sourced data from Hadoop data lake.

QRD Technologies, Data Analyst Piscataway, NJ (Part Time)

February 2019 – May 2019

Build Python and Pandas scripts to create structured reports of patients' data in a healthcare setting processing Excel, CSV, and JSON files.

Rutgers Information Technology Services, IT Helpdesk Specialist New Brunswick, NJ

April 2018 – August 2018

Assist in diagnosing and troubleshooting computer and internet related issues raised by Rutgers administrators. Communicate with Rutgers administration to issue service requests and escalate helpdesk tickets.

EDUCATION

B.S. in Computer Science, Rutgers University - New Brunswick, NJ (2016-2020) (Dean's List)

Master of Engineering Management, Arkansas State University (2023-Present)

SKILLS

Java Programming/JDBC

REST API development, Graph traversal, searching, sorting, data structures, object-oriented programming, and recursive programming

Graph traversal using Dijkstra shortest path, BFS, and DFS for finding the shortest path between two nodes within a graph, finding which nodes are strongly connected, and finding the relationship between nodes.

Python/Pandas

Scripting, object-oriented programming using data structures, data science: Pandas, NumPy, Matplotlib, Scikit Learn

Confluent Kafka

Confluent Rest API, Metadata programming, Zookeeper, Bootstrap servers, Cluster, Topic, Application Team, Consumer Group configurations

Full stack development

Created dynamic websites using Spring Boot, React, Angular, and Django frameworks

HTML5/CSS3/JavaScript

HTML5 frameworks and CSS3 Dynamic scripting, JavaScript, responsive design, and Bootstrap

RDBMS

SQL programming in MySQL, Oracle, DB2, MongoDB, and PostgreSQL

AWS

EKS, ECS, Fargate, EC2, S3, RDS, Lambda, CloudFormation, and CloudWatch
