

PROFESSIONAL SUMMARY

- Full Stack Developer with 2+ years of experience designing, developing, and deploying scalable web applications.
- Proficient in end-to-end software development, from frontend UI/UX to backend APIs and database management.
- Skilled in **JavaScript, React, Node.js, Python, and Java** for building responsive and high-performance applications.
- Experience with **cloud platforms (AWS, Azure)** and containerization tools like **Docker** for DevOps integration.
- Strong knowledge of **RESTful APIs, GraphQL, and microservices architecture** for seamless system integration.
- Expertise in **SQL (PostgreSQL, MySQL) and NoSQL (MongoDB)** databases for optimized data storage and retrieval.
- Familiar with **Agile/Scrum methodologies**, collaborating with cross-functional teams to deliver iterative solutions.
- Developed secure applications compliant with **HIPAA** standards in the healthcare domain.
- Improved application performance by **30%+** through code optimization and caching strategies.
- Built CI/CD pipelines using **Jenkins and GitHub Actions** for automated testing and deployment.
- Strong problem-solving skills with a focus on clean, maintainable, and well-documented code.
- Excellent communication skills, bridging technical and non-technical stakeholders for project alignment.

TECHNICAL SKILLS

- **Programming Languages:** JavaScript, Python, Java, SQL
- **Frontend:** React, Angular, HTML5, CSS3, Bootstrap, Redux
- **Backend:** Node.js, Express, Django, Spring Boot
- **Databases:** PostgreSQL, MySQL, MongoDB, Firebase
- **Cloud/DevOps:** AWS (EC2, S3, Lambda), Azure, Docker, Kubernetes
- **APIs/Integration:** REST, GraphQL, WebSocket, OAuth
- **Testing:** Jest, Mocha, Selenium, Postman
- **Version Control:** Git, GitHub, Bitbucket
- **CI/CD:** Jenkins, GitHub Actions, CircleCI
- **Agile Tools:** Jira, Trello, Confluence
- **Security:** HIPAA Compliance, JWT, Encryption
- **Other Tools:** VS Code, IntelliJ, Figma

WORK EXPERIENCE

Pfizer | Full Stack Developer | New York, NY |

Apr 2024 – Present

Domain: Healthcare/Life Sciences

Responsibilities:

- Spearheaded development of a patient monitoring dashboard using React, Redux, and D3.js, enabling real-time visualization of clinical trial data for 500+ users.
- Engineered microservices with Node.js and AWS Lambda to process high-volume IoT device data (10K+ requests/sec), reducing latency by 50%.

- Migrated legacy PHP systems to a React + Spring Boot stack, improving page load speeds by 60% and reducing server costs by 30%.
- Implemented JWT-based authentication with role-based permissions (RBAC) to ensure HIPAA compliance for sensitive patient data.
- Designed a WebSocket-based notification system for lab result alerts, cutting user wait times by 75%.
- Optimized PostgreSQL queries and introduced caching with Redis, reducing API response times from 2s to 500ms.
- Automated CI/CD pipelines using Docker + Jenkins, enabling zero-downtime deployments for critical healthcare applications.
- Integrated FHIR APIs with EHR systems (Epic, Cerner) to standardize patient data exchange across 20+ clinics.
- Developed unit/integration tests (Jest, Mocha) achieving 90%+ coverage, reducing post-release bugs by 40%.
- Collaborated with data scientists to deploy Python-based predictive models for adverse event detection, improving accuracy by 25%.

Environment: React, Node.js, AWS (Lambda, S3, EC2), Docker, Jenkins, PostgreSQL, Redis, FHIR, WebSocket, Jest

Cognizant | Full Stack Developer | India |

Aug 2022 – Jul 2023

Responsibilities:

- Developed a telemedicine platform using Angular 12 and Spring Boot, serving 50K+ patients monthly with 99.8% uptime.
- Built RESTful APIs for appointment scheduling and prescription management, reducing manual paperwork by 70%.
- Designed a MongoDB schema for patient profiles, optimizing read operations by 45% through indexing and aggregation pipelines.
- Created an Azure Blob Storage module for secure DICOM image uploads, reducing storage costs by 35%.
- Implemented OAuth 2.0 for single sign-on (SSO) integration with hospital portals, improving user adoption by 60%.
- Refactored legacy Java monolith into microservices, cutting deployment time from 2 hours to 15 minutes.
- Configured Azure Kubernetes (AKS) to auto-scale backend services during peak traffic (e.g., flu season).
- Integrated Twilio API for SMS/email reminders, reducing no-show rates by 30%.
- Conducted load testing with Locust, identifying and resolving bottlenecks to handle 5x concurrent users.
- Trained 5 junior developers on Angular best practices, reducing code review cycles by 50%.

Environment: Angular, Spring Boot, MongoDB, Azure (AKS, Blob Storage), Twilio, OAuth, Microservices, Kubernetes

EDUCATION

- Master's in Information Technology University of Cincinnati, OH.
- Bachelor's in Electronics and Communication Engineering JNTUH, India.
