Summary

- Over **5 years of experience** as a **Business Analyst**, working across **healthcare, banking, and software** domains with a strong understanding of **Agile, SDLC, and business process modeling**.
- Expertise in **gathering and analyzing requirements**, conducting **JAD sessions**, and collaborating with **cross-functional stakeholders** to define clear **user stories** and **acceptance criteria**.
- Proficient in **data analysis and visualization** using **Power BI, Tableau, and Excel**, with a proven track record of creating **interactive dashboards** that drive **data-driven decisions**.
- Skilled in **SQL and data modeling**, with experience in querying and transforming large datasets from **SQL Server, MySQL, and MongoDB** to support operational and strategic reporting.
- Hands-on experience with tools like **JIRA, MS Project, Visio, and SharePoint** for **project tracking, documentation, and requirements traceability (RTM)**.
- Conducted multiple **cost-benefit analyses, GAP analyses, and risk assessments**, supporting executive decision-making and successful project delivery.
- Led **UAT efforts**, coordinated with QA teams, and ensured **defect-free product releases** aligned with stakeholder expectations.
- Delivered measurable impact, including a **30% improvement in patient throughput, 20% reduction in manual reporting, and 10% increase in team productivity** through process improvements and automation.

Education

Master of Science in Business Analytics | The University of Texas at Arlington, Arlington, Texas.

Work Experience

JP Morgan & Chase, TX | *Business Analyst.*

Jan 2024 – Present

- Collaborated **closely with Product Owners to gather and analyze requirements** for a multi-department migration initiative, leveraging agile methodologies to ensure iterative delivery.
- Facilitated over two **Joint Application Development (JAD)** sessions with stakeholders to align project goals and gather critical requirements, contributing to a 3% decrease in development rework.
- Utilized **Agile project management tools such as Jira to manage backlogs**, prioritize features, and enhance team collaboration, resulting in reduced project delays.
- Partnered with the **Scrum Team and Product Owner** to define and refine user stories and product backlogs in JIRA, leading to a 15% boost in development productivity.
- Generated comprehensive **project documentation, including schedules, progress updates, and post-implementation reviews**, to share lessons learned and improve future project execution.
- Leveraged MS Project's reporting capabilities** to deliver clear and concise project status updates to stakeholders, supporting timely and informed decision-making.
- Designed interactive **Tableau dashboards and reports to monitor key performance indicators (KPIs)**, empowering data-driven strategies that led to increased sales performance.
- Delivered compelling cost-benefit analysis presentations to stakeholders, **clearly articulating the financial implications of business initiatives** and ensuring alignment with corporate objectives.
- Contributed to the formulation of IT modernization strategy for cross-departmental **migration projects**, aligning technical roadmaps with organizational goals and enhancing system resilience.
- Participated in early-stage prototyping and feasibility assessments for **automation** enhancements in reporting systems, driving a culture of continuous innovation.
- Created detailed **functional and technical specifications** for multi-department migration projects, ensuring accurate development handoff and improved stakeholder alignment.
- Applied **ITIL principles** to oversee **incident and problem management workflows**, reducing ticket resolution time and enhancing end-user satisfaction across teams.

Fortis Healthcare, India | *Business Analyst.*

August 2020 – July 2022

- Collaborated with doctors, operations, and finance teams to gather and document requirements for hospital operations, billing **workflows**, and **EHR reporting** through stakeholder interviews and **JAD sessions**.
- Developed **Power BI dashboards** to visualize **patient journey KPIs** (admissions, discharge delays, treatment costs), enabling real-time decisions that reduced bottlenecks and improved **patient throughput by 30%**.
- Led **backlog grooming**, wrote **user stories** with defined **acceptance criteria**, and prioritized requirements with **product owners**, contributing to a more efficient **Agile sprint** cadence.
- Built **SQL-based data models** and reporting views to support clinical and administrative reporting; reduced manual report effort and deepened visibility into department performance.
- Led **change management** planning during EHR reporting enhancements, including stakeholder training, impact assessment, and

updates to **user manuals** to support smooth adoption.

- Assessed vendor-delivered solutions for clinical workflows, aligning them with internal standards through rigorous **solution assessment** and feedback loops in coordination with IT.
- Created **ad-hoc analyses** using **MS Excel** and **pivot tables** to support investigations into **readmission trends**, **treatment effectiveness**, and **insurance claim denials**.
- Standardized and mapped **As-Is vs. To-Be process flows** in **MS Visio** to support **system implementations**, leading to a **25% gain in operational efficiency** and a **20% drop in user errors**.
- Streamlined **documentation** and **compliance traceability** by organizing requirements, **SOPs**, and **signoffs** in **MS SharePoint**, reducing **version control** issues by **8%**.
- Designed and maintained **JIRA dashboards** for sprint performance and throughput metrics, identifying patterns that helped increase **team productivity** by **10%**.
- Worked closely with **QA** and **UAT teams** to validate **reporting logic**, test **user stories**, and ensure successful **BI deployments**.
- Partnered with leadership during clinical trial reporting enhancements, translating analytical outcomes into decisions around trial continuation and care optimization.

Fusion Software, India | *Business Analyst*.

Jan 2019 – July 2020

- Enhanced SQL query efficiency, **decreasing data retrieval time by 10%**, which significantly boosted application speed and user satisfaction.
- Partnered with **IT to consolidate disparate data sources**, including internal transactions and external market feeds, into a unified data warehouse.
- Utilized **industry-standard tools like JIRA, Smart Sheet, MS Office Suite, Visio, and MS Project** to produce comprehensive project artifacts and ensure seamless communication and tracking.
- Led Sprint Planning meetings to define user stories with **well-articulated acceptance criteria, ensuring alignment across development cycles**. Automated reporting workflows using Power BI, increasing report accuracy and reducing manual effort by 20%.
- Authored a detailed **Business Requirements Document (BRD)** outlining project objectives, stakeholder roles, and business needs, securing swift stakeholder approval.
- Defined and documented **system design workflows**, collaborating with cross-functional teams to prepare robust **test cases** and ensure seamless software rollouts.
- Maintained **vendor relationship management**, resolving service issues promptly and contributing to improved **business system effectiveness** through regular system evaluations and enhancements.
- Leveraged **Jira dashboards and reporting tools** to monitor project health and support timely, data-driven decisions.
- Oversaw the **Requirements Traceability Matrix (RTM)** process for software rollouts, ensuring punctual and defect-free product releases. Applied advanced Excel techniques for gap analysis, uncovering market insights and informing strategic expansion plans.
- Facilitated cross-functional workshops to validate **business processes**, resulting in optimized workflows and enhanced stakeholder engagement across business units.
- Conducted impact assessments and risk evaluations for new product launches, **supporting leadership** in making informed go/no-go decisions based on data-backed insights.

Skills

Languages and IDEs: Python, SQL, NoSQL, R Programming, Visual Studio Code, PyCharm.

Methodologies: SDLC, Agile/Scrum, Waterfall.

Documentation: FRD, BRD, SRS, MS Visio, Requirements Traceability Matrix (RTM), UAT Planning.

Project Management Tools: MS Project, MS SharePoint, JIRA, Asana, Trello, MS Office Suite, ETO (Efforts to Outcomes).

Business Intelligence Tools: Tableau, Power BI, Excel, Looker, Power Query.

Databases and Tools: SQL Server, MySQL, MongoDB, SQL Server Management Studio (SSMS), Teradata, Data Warehousing, Data Integration.

Analysis Skills: Cost/benefit analysis, Impact analysis, GAP analysis, Risk analysis, SWOT analysis, Budget Analysis, Root Cause Analysis, Trend Analysis.

Business Skills: Stakeholder Management, Sprint Planning, Workshop Facilitation, JAD, Rational ClearQuest, UAT, KPI Reporting, Clinical Trial Reporting.
