☎ 469 215 7196

Sr Python Developer

➤ PROFESSIONAL SUMMARY:

- Around 6 years of IT experience in Analysis, Design, Development, Implementation, and testing of various stand - alone and client-server architecture-based enterprise application software in Python on various domains and Experience in developing applications using AWS like EC2, Cloud Search, Lambda, Elastic Load balancer ELB, S3, Cloud Front.
- Experienced with full software development life cycle (SDLC), architecting scalable platforms, object-oriented programming (OOPs) database design.
- Working experience in DevOps environment with expertise in using Configuration management tools like Ansible, Chef, puppet, and CI/CD.
- Worked on Kubernetes and Docker for runtime environment of system to build, test, and deploy.
- Experience with Git content repositories including Bit bucket.
- Experienced in working with various Python Integrated Development Environments like IDLE, PyCharm and Sublime Text.
- Excellent experience in developing web applications implementing MVT/MVC architecture using Django, Flask, web2py web application frameworks.
- Experience in Git, Jenkins, Continuous Development (CD)/Continuous Integration (CI), General understanding of networking concepts
- Extensive experience of software development in Python (libraries used: Beautiful Soup, NumPy, SciPy, matplotlib, python-twitter, Panda's data frame, network, urllib2, MySQL dB for database connectivity) and
- DEs - sublime text, Spyder, PyCharm, emacs.
- Proficient in SQL databases MS SQL, MySQL, Oracle and no-SQL databases MongoDB, Cassandra.
- Experience with Git content repositories including Bit bucket.
- Worked on Kubernetes and Docker for runtime environment of system to build, test, and deploy.
- Working experience in DevOps environment with expertise in using Configuration management tools like Ansible, Chef, puppet, and CI/CD.
- Experienced in Kubernetes which provides a platform for automating deployment, scaling, and operations of application containers across clusters of hosts.
- Experience in Data mining with large datasets of Structured and Unstructured Data, Data Acquisition, Data Validation, Predictive modeling, Data Visualization.
- Experienced in managing datasets using Panda data frames and MySQL.
- Used Test driven approach (TDD) for developing services required for the application.
- Worked on Atlassian tools like Bamboo, Jira, and Confluence.
- Knowledge of the Big Data / Hadoop ecosystem (Map Reduce, HDFS, Hive, Pig, and Sqoop), also worked on processing large data sets using Pyspark library in Python applications.
- Experienced in installing, configuring, modifying, testing, and deploying applications with Apache.

➤ EDUCATION:

- Bachelor of Technology in Information Technology, Mumbai University

TECHNICAL SKILLS:

Operating Systems	Windows, MAC OS, Unix/Linux
Languages	Python, C++, Java, J2EE
Python Libraries	Numpy, Pandas, Matplotlib, NLTK, Stats models, Scikit-learn/ sklearn, SOAP, SciPy
Cloud Technologies	EC2, S3, ELB, auto scaling Servers, Glacier, Storage Lifecycle rules, Elastic Beanstalk, Cloud Front, Elastic ache, Direct Connect, Red Shift, Cloud watch, Terraform
Python Frameworks	Flask, Django
Python IDE	Sublime Text 3, Eclipse, Jupyter Notebook, VIM, PyCharm
NLP used for Python	NLTK, OpenNLP, Stanford NLP (NER, POSTag, Tokenization)
Databases	RDBMS (Oracle, SQL Server, MySQL), No SQL (Mongo Db), HDFS (Hadoop)
Web Technologies	CSS, JavaScript, XML, AJAX, JQuery, Bootstrap, AWS, RESTful Web Services
Other	Redis insight, Redis time series, Redis, Grafana, Putty, SQL developer, Toad, JIRA, Mat lab, R, Docker, Jenkins, Kubernetes

PROFESSIONAL EXPERIENCE:

Citizens Bank & Trust CO, Kansas City, MI

July 2022 - present

Sr Python Developer

Responsibilities:

- Worked on gathering requirements, system specifications and delivering the solutions based on understanding the requirements.
- Extensively working with AWS services like S3, EC2, ELB, EBS, Lambda, Auto-Scaling, Route53, Cloud Front, IAM, Cloud Watch, and RDS etc.
- Building data pipeline ETLs for data movement to S3 and snowflake.
- Working on processing large data using AWS and Big Data tool.
- Develop, tested and deployed python scripts to create airflow dags
- Develop process workflow and developed Pyspark code adhering to teh design
- Implementing CI/CD process on Apache Airflow binary and DAGs to automate Data Pipeline.
- Worked on Airflow performance running of the DAG's and task instance.
- Implemented Multiple Data Pipeline DAG's and maintenance DAGs in airflow orchestration.
- Written AWS Lambda code in Python for nested Jason files, converting, comparing, sorting etc.
- Write UDFs in Hadoop Pyspark to perform transformations and loads.
- Used AWS services like EC2 and S3 for small data sets processing and storage, Experienced in Maintaining the Hadoop cluster on AWS EMR.
- Set up and built AWS infrastructure with various services available by writing cloud formation templates in Jason.
- With the help of IAM created roles, users and groups and attached policies to provide minimum access to the resources.
- Wrote Cloud Formation Templates in YAML and JSON
- Development of Scripts for CICD using Virtual machines, Docker, python and Yaml.
- Configured AWS CLI and performed necessary actions on the AWS services using shell scripting.
- Written cron jobs to perform operations at a scheduled time.
- Define and designed Data models to develop dimension and fact tables
- Collaborate with internal and external data sources to ensure integrations are accurate and scalable.
- data comes from Olympus CRS and send to USAN through SFTP connection. We do maintenance of the script in case of job failure.

Environment: Python 3.8+, fastapi, FHIR, Jinja, VS Code, bash script, Postman, PyTest, PostgreSQL, MySQL, pg Admin 4, Agile, J Meter, Camunda Modeler, CI/CD, Jira, Azure, docker, container orchestration- Kubernetes

Synergen Health, Dallas, Texas

Sep 2020 to June 2022

Python Developer

Responsibilities:

- Organized Python code using PEP8 online tool including documentation of scripts.
- Used Python unit and functional testing modules such as unit test, unittest2, mock, and custom frameworks in-line with Agile Software Development methodologies.
- Worked on testing and validating the workflow components according to the business requirements.
- Designed and implemented Django web server on Google App Engine, including Django object model ORM, and REST web service API to store and to access lab facility components.
- Added support for AmazonAWSS3 and RDS to host static/media files and the database into Amazon Cloud.
- Developed tools using Python, Shell scripting, XML to automate some of the menial tasks.
- Worked in Agile environment and participating in Scrum ceremonies.
- Managed datasets using Panda data frames and MySQL, queried MYSQL database queries from python using Python-MySQL connector and MySQL dB package to retrieve information.
- Fix bugs, providing production support, enhanced applications by improving code reuse and performance by making effective use of various design patterns.
- Deploy and monitor scalable infrastructure on Amazon web services (AWS).
- Experience working with Druid, a high-performance, column-oriented, distributed data store, for real-time analytics and data exploration.
- Skilled in setting up and configuring Druid clusters, including the deployment of historical nodes, coordinator nodes, and broker nodes.
- Knowledgeable in designing and implementing data ingestion pipelines to ingest and process large volumes of data into Druid, using tools such as Apache Kafka or Apache NiFi.
- Proficient in writing Druid queries and aggregations to extract insights from large datasets, enabling real-time analytics and interactive data exploration.
- Familiarity with Druid's query language, including advanced features such as filtering, aggregations, and time-based querying.
- Experience in optimizing and tuning Druid queries and configurations for improved query performance and reduced query latency.
- Implement task object to interface with data feed framework and invoke database message service setup and update functionality.
- Working with internal Content Management System to create a workflow to generate the frontend.
- Create Tableau dashboards using stack bars, bar graphs, scattered plots, geographical maps, Gantt charts using show me functionality.
- Evaluate massive data received from various data points, validate data, look for patterns and establish predictability matrices.
- Generated complex reports using SQL Queries, built a dashboard in Power BI for leadership to view the daily data transactions.
- Write and execute various MYSQL database queries from python using Python-MySQL connector and MySQL dB package.
- Developed tools using Python, Shell scripting, XML to automate tasks.
- Worked on Amazon Web Services (AWS) infrastructure with automation and configuration management tools such as Chef and Puppet.
- Worked on SQL and PL/SQL for backend data transactions and validations.
- Implemented a machine learning model to generate and rank YouTube recommendations using Python, Keras & Tensor flow.
- Worked in Agile Methodology and Test-Driven Development. Writing test cases for the scripts using the PyTest testing module.
- Performed data analysis interpretation and data management duties.
- Migrated Closure class implemented UI components, and jQuery UI component to ES6class.

- Implemented Angular Typescript report page and integrate legacy JavaScript code with Angular Typescript Hestia.
- Spearhead end-to-end deployments of cutting-edge products that include testing and code correction features.

Environment: Python 3.6+, fastapi, flask, aiohttp, Jinja, ReactJS, Splunk, Postman, Kibana, Kafka, Tableau, VS Code, PyTest, GW Post office tool, SQL Alchemy , MongoDB, PostgreSQL, No SQL Booster, Agile, J Meter, CI/CD, Open Shift, docker, container orchestration- Kubernetes.

ERIE Insurance, Erie, PA

July 2018 to Aug 2020

Python Developer

Responsibilities:

- Used Python scripts to update content in the database and manipulate files.
- Wrote and executed MYSQL queries from Python using Python-MYSQL connector and MySQL dB package.
- Developed the application and implemented the unit tests using Python Unit test framework.
- Debugged the applications monitored on JIRA using agile methodology.
- Creating and extracting data from database using SQL Queries, PL/SQL on Oracle database.
- Designed, developed, tested, deployed and maintained the web applications.
- Wrote python scripts and load the data in database.
- Rewrite existing Python to deliver certain format of data.
- Responsible for debugging the project monitored on JIRA (Agile)
- Created unit test/regression test framework for working/new code.
- Utilized Subversion control tool to coordinate team-development.
- Created data access using SQL and PL/SQL stored procedures.
- Wrote programs to parse excel file and process many user data with data validations.
- Developed custom reports using Python and MySQL.
- Developed monitoring and notification tools using Python.
- Wrote queries in MySQL and Native SQL.
- Added navigations and paginations and filtering columns and adding and removing desired columns for view.
- Worked in an agile development environment and used GitHub for version control.

Environment: Python 3, Django, Hadoop, SQL, SAS, Excel, MongoDB, Flask, Tableau, JavaScript, Eclipse, Shell Scripting, AngularJS
