<https://www.linkedin.com/in/brahmeswaripapasani/>

PROFESSIONAL SUMMARY

- **4 years** of experience as a **Full-Stack Developer**, I have a proven track record of developing.
- Expertise in developing **API based applications**. Using **Java/J2EE** technologies such as **Spring, Spring boot, Java Beans**.
- **Expertise** in **Understanding** and **designing** Applications based on **Microservices**, migrated a **Monolithic based** Application to a Microservice based Application.
- Hands-on developing **User Interfaces** using **HTML5, CSS, Type Script, jQuery, AJAX, Java Applets, Servlets, Boot strap**.
- Extensive experience in using **Front-end Frame works** like **Angular.JS, Angular, React.JS**.
- Expertise in using **AngularJS directives, Controllers, Filters, Services, Events and Injectors**.
- Extensive skills in developing **Angular forms** with different **validation techniques**. Created **custom validators** for **Form groups** and **Form fields**.
- Expertise in implementing view rendering JavaScript using **React JS with FLUX and REDUX**.
- Experience in using various spring modules such as **Spring MVC, Spring Transaction handling, Spring cloud Spring AOP, Spring Boot, Spring JMS and Spring Context**.
- Experience with the ORM tool **Hibernate** involving **Connection pooling, Mappings, Transaction Management, HQL (Hibernate Query Language)**.
- expertise in **Core Java** concepts like **OOPS, Data structures and algorithms, Collections, Event handling, Multithreading, Exceptional handling, Generics, I/O and Java. Lang Package**.
- Experience in **J2EE** design patterns like **MVC, Front controller, Factory, Abstract Factory, Singleton, Transfer Object and Data Access Object**.
- Experience in using various **AWS** components, like **EC2, S3, Cloud Watch**.

- Excellent knowledge in design principles and patterns like **Singleton, Factory, 12-factor design method, Circuit breaker method**.
- Designed and developed enterprise services using **RAML and REST** based APIs and used various transformers based on use case and had implemented the custom
- Knowledge on various **Azure services** like **Compute, Azure Websites, Caching**.
- Proficient with container systems like **Docker** and container orchestration like **EC2 Container Service, Kubernetes**, worked with **Terraform**.
- Actively Worked in Unix/Linux environments, developed shell scripts to perform various activities in the RedHat server.

SKILLS

- JBoss, Apache Tomcat.
- Java 11/8, PL/SQL, SQL, Python
- Core Java, JSP, JMS, Java Beans, EJB
- Spring, Hibernate, Spring Boot, Angular.
- HTML5, CSS3, JavaScript, jQuery, AJAX
- Angular, React.JS, REDUX, React Native
- AWS, Azure
- SVN, CVS, GitHub
- Oracle, SQL, Mongo dB.
- Agile, Waterfall, Scrum
- Kafka (Confluent, Apache), Docker

WORK HISTORY

Java Fullstack Developer,
TCS Dallas,TX

Nov 2023- July 2024

- Involved in Development a multi-page **customer loan management Microservice** to serve as an effective tool for loan officers, providing insights into customers' previous financial activities to make informed lending decisions
- Implemented a dynamic and intuitive **user interface** using **HTML, CSS, Typescript, React**, providing a seamless experience for Bank representatives to manage the customer loans.
- Implemented **client-side navigation** using **React Router**, allowing users to move between different **pages and routes** in the application.
- Utilized **React hooks**, such as **useState, useEffect, and useContext**, to manage component state and re-render components efficiently.

- Used **React Redux** to manage global state, ensuring data consistency and making it easier to update and access application data.
- Used java features like **lambda expressions, functional interfaces, Inheritance**, to refactor the code, used common functional interfaces like **Consumer, Supplier**, and **Function**,
- Implemented the Spring core features **Dependency Injection (DI), Inversion of Control, Bean creation, Component Scan**.
- Used **Spring MVC** in the application Developed Action classes and Form beans and configured **spring-config.xml**.
- Used **Spring Data JPA** to interact with **relational databases**, providing a simple and efficient solution for data storage and retrieval.
- Designed and developed **Hibernate** configuration and session-per-request design pattern for making database connectivity and accessing the session for database transactions respectively.
 - Implemented security measures, such as **OAuth2 and JWT**, to ensure the privacy and security of data and transactions in the microservices.
- worked with Application using **React.JS and Node.JS** libraries **NPM**, gulp directions to generate desired view and flux to root the **URL's** properly.
- Used **Stored Procedures, Triggers in SQL** to cater the needs for the entire application. Developed complex **SQL queries** for extracting data from the database.
- Used **Jira** for bug management and ticket tracking.
- Implemented the project under **Agile** Project Management Environment and followed SCRUM iterative incremental model & configured various sprints to execute.
- Stored Application Data like **Videos and pictures and Log files in Amazon s3 bucket**.
- Used Docker to create Images and Jenkins to create a CI/CD pipeline.
- Written **unit test cases** using **Junit** and Log4j to log and analyze the application messages.

Environment: Java 8, Spring Boot, React.JS, Kafka, Hibernate, MVC, Micro Services, RESTFul, JavaScript, Node.JS, Docker, Log4j, JUnit, SQL,Jira.

- Web based Application that supports **Patient Data** like maintaining and updating **patient details** like Medical Reports and Medical history.
- Developed **UI** using **HTML5, CSS3, Bootstrap, Angular** for interactive cross browser functionality and complex user interface, jQuery library to **dynamically manipulate the DOM**
- Involved in development of a login using **Angular route guards** like **CanActivate, CanActivateChild** and **Angular Inteceptors**.
- Used **@Input and @output** to make a communication between parent and child components. in standard medical format **ccd/ccda**.
- Created Various **views of data based on the level of administration**. Updated details dynamically in various Health departments and user Portals.
- Created the application using **Microservices** and generated loosely coupled components following **dependency injection** and **Inversion of control**.
- Implemented **Micro-services** using **Pivotal Cloud Foundry** platform build upon **Spring Boot**..
- Developed **middle-tier** application with **J2EE** using **EJB, Java Beans and Web Services Standards (SOAP, WSDL, UDDI)**.
- Created Docker containers and **Docker** consoles for managing the application life cycle.
- Used **log4j** to log all error messages of application along with debugging purposes.
- Involved in Unit testing of application using **JUnit** and built the package using **Maven** and deployed the application on to **Web-Logic App Server**.
- Created Kafka **producer API** to send live-stream data into various Kafka topics.
- Real time streaming the data using Spark with Kafka. Responsible for **handling Streaming data from web server console logs**.
- Involved in Creating **Postgres schema configured the database according to the Application entity**.
- Used **Splunk** to review and analyze application and server logs. Created **Splunk dashboards** to analyze the microservice metrics.

Environment: Java 8, Spring Boot, JavaScript/Type script, Angular, Node.JS, EJB, Log4j, JUnit, Jenkins ,Postgres ,GCP, Splunk.

-

Java developer

TCS -India

Sep 2021- July 2022

- Developed the Web Interface using **spring, HTML5, CSS3 and JavaScript and Angular**.
- Implemented **Angular Router** to navigate from one page to another to the another in application.
- Primarily worked on **REST API**, configured **microservice modules**, to create **API end point** and mapped respective Post and Get HTTP calls to the controller functions.
- Followed **OpenAPI** as a standard to implement the **API structure** and **end point configuration**, created interoperable API that can Work-on different range of clients.
- Implemented Spring **Framework** as a backend logic, implemented **Dependency Injection, beans**, and integrated it with the **Hibernate**.
- Built **RESTful** web service using Spring MVC, Implemented Controller class to handle all the incoming requests.
- Used **Java Mailing or Messaging Service (JMS) API's** for mailing detailed notifications depending upon the success and failure once the backend process is complete and also for mailing administrator of any system related problems.
- Used the **J2EE design patterns** like Value Object Pattern, Business Delegate, Service Locator and Session Façade, Singleton, Factory and DAO.
- Developed web services **SOAP, WSDL** and web services clients using **JAXB and XML**, implemented **SOA** architecture.
- Used **Postman** to test **Web API** functionality.
- Used **Log4j** for External Configuration Files and debugging.
- Wrote test cases in **JUnit** for unit testing of classes.
- Involved in database design using **MongoDB**, to write Stored Procedures, Functions, Triggers, prepared Statements.
- Actively participated in **daily SCRUM meetings** to produce quality deliverables within time.

Environment: J2EE, Spring, MVC, Angular, Micro Services, Spring Boot, Hibernate, DOM, SOAP, WSDL, JAX-B, IBM WebSphere ,Log4j, JUnit, MongoDB, Kafka.

•

Java Developer,

Nov 2020 – Aug 2021

Micro info global – India

- Gathered Business Requirements and meeting different users of the application.
- Design and implement an application using **Spring MVC, Spring IOC, spring transactions, Dependency Injection Spring Annotations, and Spring AOP.**
- Utilized **Spring MVC** annotations and **XML** configuration for Dependency Injection.
- Implemented the application using **Spring** Framework to write and consume **Restful** services.
- Defined and developed the User interface screens and the corresponding **Java artifacts** using **spring**.
- Developed the persistence layer using **Hibernate** Framework, created the **POJO** objects and mapped using Hibernate annotations.
- Created **Hibernate** mapping files to map with the **database tables** and **Java objects**.
- **Eclipse** is used for development as **IDE**.
- Used **JMS** for asynchronous exchange of message by applications on different platforms.
- Created log scripts in **XML** and the corresponding code in the **Java classes**.
- Implemented various useful design patterns including **Singleton and Data Access** objects etc.
- Developed services that are reusable and interoperable, using **SOAP, WSDL, JAXWS, JAXRPC Web services**.
- Planned and implemented **various SQL, Stored Procedure and triggers**. Work in an **Agile/Scrum** development environment
- Involved in Production support and provided training and knowledge transfer to the user.

Environment: Java, spring, Hibernate, MVC, Micro Services, Eclipse, Java Classes, SOAP, SQL, Agile and Windows.
