

PROFESSIONAL SUMMARY

Software engineering student and current System Administrator with hands-on experience building mobile, game, and systems-level software, combined with professional experience supporting Linux and AWS-hosted environments on a Department of Defense contract. Strong foundation in Java, C#, data structures, and system design, with a proven ability to learn quickly, ship real projects, and solve complex technical problems. I am seeking an early career software engineering role in a growth focused environment.

TECHNICAL SKILLS

Programming Languages: Java, C#, Python, JavaScript, HTML, CSS

Framework Tools: .NET, React, Android SDK, Unity, and Git

Systems & Platforms: Windows, Linux/Unix, Active Directory, AWS, PostgreSQL, Jira, and Splunk

EDUCATION

Southern New Hampshire University - Manchester, NH (Anticipated Completion March 2026)

BS Computer Science: Cumulative GPA 3.8

CompTIA Security+ (Expires May 2028)

AWS Certified Developer Associate (Expires July 2028)

PROJECTS

Weight Journal Android Application

- **Languages and Frameworks:** Java, XML, SQLite, Android Studio
- Designed and implemented an Android application supporting multi-user accounts, persistent SQLite storage, data visualization, and scheduled notifications, emphasizing clean architecture and maintainability.

Gym Simulator (in development)

- Languages and Frameworks: Unity, C#, .NET
- Developed complex AI behaviour, currently including a check in system with random traits such as day pass, monthly member renewal, or simple check in. AIs can create messes and break equipment as well.
- Engineered a challenging, physics based bench press system. The barbell fights against the player based upon the amount of weight added to the barbell and the current player strength. XP and strength gained are calculated through difficulty and reps.
- Built an item shop that holds scriptable objects in which a player can purchase the item, have it delivered in a box prefab, and then open the box to place the item in their gym. The item shop also houses hiring AI agent workers for your gym.

Study Security Plus Website

- Languages and Frameworks: HTML, JS, CSS
- Developed a website to assist my studying for the CompTIA Security+ exam, while boosting my web development skills.

TCG Card Shop Simulator Mod Menu

- Languages and Frameworks: C#, .NET, Bepinex, Harmony
- Built a Mod Menu using Bepinex (plugin framework for Unity games) and Harmony (runtime patching framework) demonstrating runtime patching and hooking.
- Developed features to manipulate in game currency, spawn objects, override pack odds, and make all shop items free.

EMPLOYMENT EXPERIENCE

Systems Administrator – Leidos, Department of Defense Contract (Mar 2025 – Present)

- Supported and maintained systems in a DoD production environment, on both Windows and Linux environments, troubleshooting software and access issues, analyzing logs in Splunk, and working with AWS-hosted services and PostgreSQL databases to ensure system reliability.
- Work with PostgreSQL, Active Directory, JIRA, Splunk, AWS, and other IT support tools.

Digital Team Associate - Walmart, Buckhannon, WV (06/2024 - 03/2025)

- Efficiently fulfilling online orders through shopping, storing, preparing, and dispensing to customers and delivery drivers through a high octane environment to ensure customer satisfaction is met.

Meat and Produce Team Lead - Walmart, Buckhannon WV (08/2023 - 2/2024)

- Led a team of 8 associates to ensure smooth daily operations and meet department objectives, fostering collaboration and efficiency.
- Developed and implemented strategic merchandising plans, achieving a consistent overall increase in sales over six months.
- Streamlined inventory management processes, identifying discrepancies and resolving issues, demonstrating problem-solving and organizational skills.
- Balanced leadership responsibilities while pursuing a full-time online software engineering degree, showcasing time management and dedication.
