

CHANDANA KOTLA

Data Analyst

Location: Arlington TX | Phone: (682)-521-4418 | Email:kotlachandana155@gmail.com

SUMMARY

- Around 4 years of experience in analyzing business processes, gathering requirements, and driving process improvements with solid background in Business Analysis, Data Visualization, and Business Strategy. Leveraging this skill set to develop optimal tactics to support the strategic objectives of an organization and to improve business processes.
- Skilled in Python and SQL, with experience in developing complex queries, extracting, transforming, and analyzing data from relational databases to uncover actionable insights.
- Proficient in designing and implementing data visualization solutions using Tableau and Power BI, enabling decision-makers to access intuitive dashboards and reports tailored to business needs.
- Experienced in building predictive models, including regression analysis, decision trees, and time series forecasting, to uncover trends and support marketing strategies.
- Adept at conducting statistical analysis to identify key business drivers, utilizing advanced tools like Alteryx and SAS for data manipulation and transformation.
- Proven ability to deliver self-service analytical solutions, incorporating user interface design and usability considerations to empower end-users with minimal training.
- Skilled in performing market research, feasibility studies, and financial measurement analysis, providing comprehensive insights for strategic decision-making.
- Demonstrated expertise in creating Business Requirement Documents (BRD) and Functional Requirement Documents (FRD) to ensure clear communication across stakeholders.
- Collaborative experience with defining key performance indicators (KPIs) and crafting custom reports to evaluate campaign effectiveness and drive improvements.
- Strong understanding of advanced Microsoft Excel features for data modeling, analysis, and visualization to support business intelligence initiatives.

SKILLS

Programming Languages	Python, C, R, SQL, Java
Business Skills:	Change Management, Impact Analysis, Risk Analysis, Cost-Benefit Analysis, ROI Analysis, SWOT analysis, Root Cause Analysis
Statistical Models:	Linear/Logistic Regression, Bayesian Analysis, Random Forest Models, Cluster Analysis, Time Series Analysis
Utilities/Tools	SharePoint, Google Analytics, Alteryx, RStudio, SAS, SAP, Jira, MS Office, MS Excel, Visio, Lucid charts
Data manipulation & Visualization	Tableau, SSRS, Power BI, MS Access, NumPy, Matplotlib, Big Data Analytics
Database Management	Data Warehousing, Distributed Big Data Tools, Cloud-Based Tools, Hadoop

EXPERIENCE

Data Analyst, Molina Healthcare, TX

Jan 2023 - Current

- Developed and tested Healthcare Analytics dashboards using **Power BI** Desktop by analyzing large volumes of healthcare data from **Oracle** and **MySQL** Databases to extract meaningful insights.
- Conducted data cleansing, transformation, and validation processes to ensure data accuracy and consistency in healthcare analytics reports. by using Power Query and Power Pivot.
- Leveraged advanced Excel skills, including complex formulas, pivot tables, and data visualization tools, to analyze large datasets and present actionable insights to drive business decisions.
- Performed Complex calculations and measures using DAX (Data Analysis Expressions) & MDX functions in the Tabular Mode & multidimensional Cubes to derive KPI's and metrics.
- Designed and optimized complex **SQL** queries to retrieve and aggregate data from multiple sources, improving reporting efficiency by 35%.
- Delivered advanced marketing analyses, leveraging segmentation, predictive analytics, and business intelligence to provide actionable insights and support client decision-making.
- Developed stored procedures and triggers in SQL Server to automate routine data processing tasks, saving over 20 hours of manual work per month.
- Applied **Python's** SciPy and Stats models libraries for hypothesis testing and identifying significant factors impacting patient satisfaction scores.
- Designed and optimized ETL workflows to streamline data ingestion, transformation, and loading processes.
- Designed and implemented **R-based models** to analyze healthcare claims data, uncovering patterns of fraud and abuse.
- Collaborated with cross-functional teams such as Data Engineers, Data Scientists, and healthcare professionals to gather requirements and translate them into effective Power BI solutions, tailored to their specific needs.

- Utilized predictive software for statistical analysis, including regression models, decision trees, **random forest**, and time series, to uncover trends and enhance strategic decision-making.
- Acquired foundational knowledge of **Alteryx**, Alteryx Server to enhance data workflows and support strategic initiatives.
- Utilized **R code** for statistical analysis, modeling, and visualization to generate actionable insights and improve project efficiency.
- Created complex and interactive data visualizations using **Tableau** and **SSRS**, enhancing stakeholder communication. These visualizations led to a 15% improvement in data-driven decision-making and a 20% increase in project success rates.
- Automated routine data extraction and transformation tasks with **Python**, integrating APIs and database connections to streamline workflows.
- Participated in Requirement Analysis, Design, and Development phases of the agile model system, collaborating closely with Business Analysts and Architects to gather and understand project requirements.
- Communicated complex data findings through clear and concise reports and presentations, ensuring alignment with both technical and non-technical stakeholders.
- Developed, monitored, and deployed SSIS packages and User-Defined Functions to provide application scores and views.
- Assisted in fulfilling Ad hoc-Query Requests using Joins, Subqueries, and Co-related Subqueries, while also writing and debugging Stored Procedures, **DDL/DML Triggers**, and Functions to meet client requirements.

Business Intelligence Analyst, KPMG, India

Aug 2019 – Jul 2021

- Conducted data mining and predictive analytics, generating actionable insights that enhanced financial performance and customer engagement.
- Created data visualization dashboards in **Tableau** and **Alteryx** to present insights effectively to stakeholders.
- Developed **regression models** (linear, logistic, and Bayesian), decision trees, and time series analyses to identify significant trends and data relationships.
- Designed intuitive user interfaces for self-service analytics tools, ensuring ease of access and usability for end-users.
- Delivered detailed research-based recommendations to support strategic decision-making across departments.
- Conducted advanced statistical analyses, including k-means clustering and random forest modeling, using **R** and **Python**.
- Automated routine data aggregation tasks using Alteryx Designer, increasing team productivity by 30%.
- Collaborated with cross-functional teams to define KPIs and improve the accuracy of business intelligence tools.
- Reduced customer churn by 10% through segmentation and predictive modeling using **Python** and **Tableau** dashboards.
- Designed a SharePoint-based collaborative workspace for analytics projects, streamlining communication across teams.
- Enhanced data governance by creating standardized SQL scripts for data cleaning and validation, reducing errors by 25%.
- Conducted performance tuning for **SQL** queries, including indexing and partitioning strategies, to enhance database response times by 40%.
- Provided actionable business and customer insights through detailed data analysis and trend monitoring, helping clients make informed decisions.
- Designed and automated Excel dashboards and reports, streamlining data tracking and improving reporting efficiency for key stakeholders.
- Built dynamic SQL-based dashboards in Tableau and **Power BI** that allowed users to slice and dice data interactively.

PROJECTS

Capstone project- Canton & Company

- Built a tool using python for Health care service providers to get details about company description and core offerings in the healthcare industry.
- Built a web scrapper to extract details related to Products, Solutions, Services, Platforms & Clients of companies and summarized the content in 250 words.
- Integrated data cleaning and preprocessing techniques to ensure the accuracy and quality of the retrieved information.

Machine Learning Model to predict early symptoms of Alzheimer's disease

- Utilized Dimension reduction techniques to extract relevant features and transform raw data into meaningful inputs for the machine learning model.
- Employed various machine learning algorithms, such as logistic regression, support vector machines, SVM, Decision Tree, Random Forests, to train and evaluate the predictive model's performance.

Telecom Churn Prediction Analysis

- Performed exploratory data analysis (EDA) to pre-process the data and then classification models like Logistic regression, Decision trees are built to analyze the data and provided areas of improvements.
- Reduced the churn rate from 21% to 7% with the recommendations provided.

EDUCATION

University of Texas at Arlington, TX
Master of Science in Business Analytics.

Aug 2021 – Dec 2022

National Institute of Technology Karnataka, Surathkal
Bachelor of Technology in Metallurgical Engineering.

Aug 2015 - May 2019
