

Software Engineer

CORE STRENGTHS		
• C# Development	• Troubleshooting & Debugging	• Data Analysis
• JIRA Ticketing	• Cross-functional Collaboration	• User Provisioning & Sprint Planning
• Automation Engineering	• Documentation & SOP Development	• Stakeholder Communication
• Regulatory Compliance	• SQL Server	• Application Support
• Testing & Validation	• Technical Documentation	• SDLC Documentation

RECENT WORK EXPERIENCES

ANDESA SERVICES — REMOTE	MAY 2024 – JUL 2025
Software Engineer / Release Engineer	
• Took ownership of release coordination across engineering, QA, and business teams, scheduling deployments, leading release meetings, and managing production change windows. • Managed CI/CD workflows using Jenkins and Git, ensuring controlled, repeatable deployments and minimizing production risk. • Built and maintained automation around release processes to improve reliability and reduce manual errors. • Owned backend support for calculation and reporting systems used by enterprise insurance clients including Allianz, PFS, New York Life, and Cigna. • Developed and maintained backend logic supporting financial calculation engines used in reporting pipelines. • Debugged production issues across application code, services, and databases, identifying root causes and driving fixes to resolution. • Implemented monthly rate updates and business rule changes affecting BOLI, COLI, and whole life insurance products. • Worked closely with business operations teams to validate calculation accuracy and ensure financial data integrity. • Acted as a technical bridge between business stakeholders and engineering teams, translating operational requirements into technical implementation. • Maintained detailed release documentation, deployment procedures, and post-release validation checklists. • Used JIRA for sprint planning, defect tracking, release coordination, and cross-team communication.	

HEXURE — REMOTE	MAY 2022 – OCT 2023
Software Engineer	
• Developed and supported backend C#/.NET services powering FireLight’s financial modeling, reporting, and transaction workflows. • Worked on calculation logic used in annuity and insurance reporting, validating accuracy against business rules and regulatory requirements. • Debugged production issues by tracing execution paths, analyzing application logs, and validating SQL Server data integrity. • Supported monthly release cycles including rate updates, system configuration changes, and backend logic updates. • Assisted with backend changes impacting reports and calculation engines, verifying end-to-end data flow correctness. • Partnered with QA and product teams to reproduce defects, validate fixes, and close production issues efficiently. • Maintained change tracking through JIRA and followed SDLC processes in an Agile environment.	

Software engineer / IT

- Provided hands-on IT and software support across manufacturing and office environments, replacing, imaging, and deploying desktop systems for employees.
- Installed operating systems, configured user profiles, permissions, security settings, and ensured systems were production-ready for daily operations.
- Set up and troubleshoot networking, peripherals, and security configurations, resolving hardware and software issues as they arose.
- Supported internal databases and business systems, writing and maintaining **Delphi code** used for data entry, validation, and reporting workflows.
- Worked directly with end users to understand requirements, diagnose issues, and deliver reliable technical solutions with minimal downtime.
- Assisted with system documentation and ensured consistency across deployed machines and configurations.

SELECTED PROJECTS

Microcontroller	Project:	4-LED	Bit-Banging	Sequence
Platform: Tinkercad / Arduino Simulation				
https://www.tinkercad.com/things/ktdWE28eW8q-brilliant-uusam-migelo				
• Designed and implemented a digital circuit simulation using Arduino in Tinkercad to control 4 LEDs. • Applied bit-banging techniques to manually toggle output pins, creating precise LED sequences without relying on hardware-specific libraries. • Developed code to sequentially turn LEDs on and off, demonstrating understanding of timing, digital I/O, and low-level data manipulation. • Tested and debugged logic to ensure accurate LED patterns, simulating real-world embedded system behavior. • Gained practical experience in microcontroller programming, circuit simulation, and hardware/software integration. •				

Support Workflow Automation – Built PowerShell and Python utilities for log parsing, error detection, and automated response generation.

Full-Stack Car Inventory Platform – Designed a PHP / JavaScript / SQL web app with authentication, CRUD operations, and server-side validation.

EDUCATION & CREDENTIALS

Bachelor of Science (BS) in Computer Science; Minor: Mathematics – East Stroudsburg University, East Stroudsburg, PA
Associate of Applied Science (AAS) in Computer Science – Northampton Community College, Bethlehem, PA

SQL Essential Training, Advanced SQL for Data Scientists, C# Essential Training: LINQ & Collections, .NET Essentials: LINQ for Databases

TECHNICAL SKILLS

- **Languages:** C#, Python, JavaScript, PHP, SQL, HTML, CSS, Shell, PowerShell
- **Frameworks:** .NET, Node.js, React (learning), Laravel (familiar)
- **DevOps:** Jenkins, Azure DevOps, Bitbucket Pipelines, GitHub Actions
- **Cloud:** Azure, AWS (basic), Docker,
- **Databases:** SQL Server, MySQL
- **Tools:** Jira, Git, Visual Studio, JMeter, ServiceNow, Google Workspace
- **Methodologies:** Agile / Scrum, CI/CD, Knowledge Base Architecture
