## Work Experience

---

### Data Specialist

Modernist Cuisine-Bellevue, WA

September 2023 to January 2026

- Applied domain knowledge of ingredients and techniques to aid in categorization of a database of recipes to be used in a large-scale food science project for publication.
- Extracted and transformed large quantities of data using proprietary software and Microsoft Excel to contribute to a growing database.
- Maintained an extremely high standard of accuracy and error checking using automated and manual methods to ensure data integrity.

### Data Engineer/ Software Engineer (student)

Devmountain-Lehi, UT

March 2022 to July 2022

Magic & Machine Learning - Github Repo | Demo

Python | Pandas | SciKitLearn | JupyterNotebook | Seaborn | matplotlib |

- Performed a statistical analysis of the game Magic: the Gathering (Mtg) using Pandas and Jupyter Notebook to discover insights on game mechanics and design patterns
- Produced analytical and descriptive visualizations using Seaborn and matplotlib to identify and communicate patterns and tendencies in the MtG dataset
- Implemented multiple machine learning models (including Logistical Regression, K Nearest Neighbors, Random

Forest Classification and others) using SciKitLearn to predict information about game asset categories

Devmoehill Random Paired Programming Assignment - Github Repo | Demo

NodeJS | Sequelize | axios | Express | PostgreSQL | Bootstrap |

- Developed a web app using NodeJS and Sequelize to efficiently assign paired programming duos without repeats
- Implemented a PostgreSQL database to track historical pairing data and filter out unwanted results
- Integrated HTML5, Bootstrap, and CSS for styling

### Game Designer

Alpaca Noir-Newberg, OR

August 2019 to March 2020

Random Access Melee

- Developed a digital tactical card game using Python to rapidly prototype and balance gameplay mechanics
- Coordinated with the primary programmer using Trello and Bitbucket to ensure correct handling of game design implementation
- Managed a local database of game assets and card types using Python and a NoSQL database to rapidly update design changes

## General Manager

Aviary Restaurant-Portland, OR

December 2011 to April 2019

- Oversaw all front-of-house operations, including hiring, firing, scheduling and training of all staff, petty cash management & dispersal, supply ordering, customer relations and any other tasks that needed doing
- Redesigned the restaurant website using a web-based templating service to more effectively communicate the vision of the chef and products offered
- Led a small team of dedicated service professionals to be consistently ranked as one of Portland's best restaurants by local publications including The Oregonian, Portland Monthly, the Willamette Week & The Portland Mercury

## Education

---

### Philosophy & Comparative Religion (B.S.)

Nyack College-Nyack, NY, US

2002 to 2005

### Bachelor's degree

## Skills

---

- Numpy
- VLOOKUP function
- Data visualization
- Data reporting
- MySQL
- Communication skills
- SQL
- Databases
- plotly
- Github
- Git
- Python
- Data analysis skills
- Pandas
- PostgreSQL
- Seaborn  
Jupyter Notebook
- Database data integrity
- Power BI
- Express
- Microsoft Excel
- Javascript

- Statistics
- Insomnia
- Analysis skills
- Business analysis
- Relational databases
- Tableau
- Anaconda
- Excel
- Pivot tables
- HTML5
- Excel data analysis
- Presentation skills
- PowerBI
- Data analytics
- Bootstrap
- CSS
- sequelize
- Analytics
- scikit-learn
- Data extraction
- Data validation
