Work Experience

Junior Web Developer

SisuVR-Remote

January 2023 to March 2023

Worked hand-in-hand with two other junior web developers, sharing tasks to make the website better. Regularly met with a senior software developer for advice, creating a positive and learning-focused work environment. Learned and used Django to fit the company's tech setup, making our work more efficient and cohesive.

Reviewed the design team's plans on Figma, helping to understand exactly what they wanted. This allowed us to turn their design ideas into working parts of the website accurately and efficiently.

Web Developer Intern

COLAB-Remote

May 2022 to July 2022

Collaborated effectively with a multidisciplinary team comprising of an intern Product Manager, Product Designer, and another Web Developer. Together, we successfully launched the Fruubie project within a tight 12-week timeline, demonstrating strong teamwork and efficient project management.

Education

Computer Science (Bachelor's degree)

Dominican University-San Rafael, CA

August 2021 to December 2023

Bachelor's degree

Upper secondary education

Skills

React Software Development Microsoft 365 support MySQL Computer networking
