

SUMMARY

Data Engineer with **4+ years of hands-on experience** designing, building, and optimizing **scalable ETL/ELT pipelines** using **Python, PySpark, SQL, and Scala** across **Azure and AWS** environments. Strong expertise in **Azure Data Factory, Databricks, Synapse Analytics, and Apache Airflow** for batch and real-time data processing. Proven ability to integrate data from **20+ heterogeneous sources**, improve pipeline performance, and ensure **data quality, reliability, and governance** in **banking and telecom domains**. Experienced in **data modeling, lakehouse architecture (Medallion – Bronze/Silver/Gold), pipeline monitoring, and SLA-driven data reliability**, with a strong focus on **secure, cost-optimized, and analytics-ready data solutions**. Adept at collaborating with cross-functional teams to deliver data solutions that support analytics, reporting, and business decision-making.

SKILLS

Programming Languages	Python, SQL, PL/SQL, T-SQL, Java, Scala, Unix Shell Scripting
Big Data Technologies	Hadoop, Spark, Hive, MapReduce, Pig, Sqoop,HDFS
ETL & Data Processing	ADF, SSIS, Informatica, PowerCenter, Apache Airflow, AWS Step Function, Talend
Cloud Platforms	Azure (Data Factory, Databricks, Data Lake Storage, Blob, Synapse Analytics), AWS (EC2, S3, Redshift, Glue), GCP
Serverless Computing	Azure Functions, AWS Lambda, Google Cloud Functions
Databases	MySQL, PostgreSQL, SQL Server, Oracle, Snowflake, NoSQL (MongoDB, DynamoDB)
Data Architecture & Reliability	Data Modeling (Star & Snowflake Schema), Medallion Architecture, Lakehouse Architecture, Incremental & Idempotent ETL, Pipeline Monitoring, SLA Management
Streaming Technologies	Apache Kafka, Apache Spark, Amazon Kinesis
Machine Learning & AI	TensorFlow, Scikit-learn, PyTorch, Keras, PyMC3, NLP (NLTK, SpaCy)
Libraries	Pandas, NumPy, SciPy, Matplotlib, Scrapy, Plotly
Data Visualization Tools	Power BI, Tableau, Microsoft Excel, SSRS, IBM Cognos Analytics, QlikView, QuickSight, Seaborn
DevOps & CI/CD	Git, GitHub, Jenkins, Docker, Kubernetes
Methodologies	SDLC, Agile, Waterfall

TECHNICAL EXPERIENCE

Santander Bank, CA | *Data Engineer*

Sep 2024 — Present

- Extracted data from **20+ sources** using **Azure Data Factory** and stored it in **Azure Data Lake Storage Gen 2**. Transformed large datasets with **Azure Databricks** using **PySpark and SQL**. Structured data was then loaded into **Azure Synapse Analytics** for advanced analysis and reporting.
- Implemented **SDLC** and **Agile** in data engineering projects, streamlining **ETL workflows** and automating pipeline deployments, improving development efficiency by **30%** and enhancing collaboration between data teams and stakeholders.
- Developed** data quality and reconciliation frameworks to address **data inconsistencies across multiple source systems**, implementing **validation rules and checks** using **Azure Data Factory, PySpark, and SQL**, which improved **data accuracy and SLA compliance** by **~30%**.
- Established scalable data pipelines in **Scala** using **Object-Oriented Programming** and Maven, improving maintainability and performance.
- Engineered big data solutions with **Hadoop, Hive, HDFS**, and **Sqoop**, automating data ingestion and storage, reducing query execution time by **35%** and improving data accessibility.
- Developed **ETL pipelines** using **Python**, leveraging **Pandas** and **NumPy** for efficient data processing, optimizing data

- transformation speed by **40%**. Utilized **Matplotlib** for **data visualization**, enhancing analytical insights and reporting.
- Automated deployment pipelines with **Jenkins**, **CI/CD**, and **YAML**, streamlining data workflows and improving system reliability, reducing deployment failures by **25%**.
- Built real-time data streaming solutions using **Apache Kafka**, **Docker**, and **Kafka REST Proxy**, ensuring seamless data flow, and reducing message processing latency.
- Designed scalable data solutions in **Azure Databricks**, utilizing **Data Warehousing** principles and **Databricks Notebooks**, enhancing data processing efficiency and reducing computation costs.

Vizag Broadband Communications Pvt Ltd, India | Data Engineer Nov 2020 — Jul 2023

- Leveraged **Python** and **MySQL** to develop data-driven solutions, optimizing complex queries and automating data workflows, resulting in a **25%** reduction in manual processing time.
- Optimized data workflows by integrating **AWS** services like **Amazon Redshift**, **CloudWatch**, and **Redshift Spectrum**, reducing query processing time by **40%** and improving system monitoring for proactive issue resolution.
- Streamlined **ETL** processes by leveraging **Kubernetes** and **DevOps practices**, automating deployments and scaling workloads dynamically, which reduced operational overhead and improved system reliability.
- Built** analytics-ready data models to overcome **limited usability of raw datasets for reporting**, utilizing **Python**, **SQL**, and **PySpark**, which improved **report consumption efficiency and reduced manual data preparation by ~40%**.
- Developed** pipeline monitoring and failure-handling mechanisms to mitigate **frequent ETL delays and reliability issues**, using **Apache Airflow scheduling, logging, and alerts**, resulting in **~30% improvement in pipeline reliability and data freshness**.
- Improved big data processing efficiency with **PySpark**, **Amazon S3**, and **Python**, enabling faster **ETL pipelines** that reduced data processing time and enhanced data accessibility for analytics teams.
- Automated data workflows using **Apache Airflow**, optimizing **DAG** design, and leveraging **Hooks** to streamline infrastructure provisioning with **Terraform**, reducing manual intervention by **50%** and increasing pipeline efficiency.
- Enhanced **ETL performance** by implementing **Informatica PowerCenter** and **Talend**, automating data transformation processes, reducing data integration time, and enhancing data quality for reporting.
- Enhanced data processing and machine learning workflows using **Python**, **Scrapy**, and **PyTorch**, automating web scraping and deep learning model training, which improved data extraction efficiency by **35%** and accelerated model performance tuning.
- Customized big data processing using **Spark** and **MapReduce**, implementing efficient distributed computing strategies that reduced job execution time and improved scalability for large-scale data pipelines.

EDUCATION

Masters in Information Systems , Cleveland State University, USA.	GPA: 3.83 / 4.00
Bachelors in Electronics and Communication Engineering , ACE Engineering College, India	GPA: 7.3/10.00
