

Gangam Vaishnavi

Data Analyst

USA | +1 (201) 679-1961 | Email: vaishnavig@myworkmails.com | [LinkedIn](#)

SUMMARY

Data Analyst with 3+ years of experience delivering business intelligence, predictive insights, and data-driven decision support across financial, technology, and consumer electronics domains. Proficient in SQL, Python, R, Tableau, Power BI, and advanced Excel, with expertise in ETL pipelines, data modeling, and statistical analysis. Skilled in leveraging cloud platforms (AWS, Azure, GCP) and modern data engineering tools (Snowflake, BigQuery, Databricks) to enable scalable analytics solutions. Adept at collaborating with cross-functional teams to improve KPIs, automate reporting, ensure compliance with SOX/GDPR, and translate business needs into actionable insights that improve profitability and operational efficiency.

PROFESSIONAL EXPERIENCE

Data Analyst Accenture (Internship) USA	Jan 2025 – Current
- Designed and automated large-scale ETL pipelines using Apache Airflow, SQL Server, and Snowflake to process data from ERP, CRM, and finance systems, cutting manual work by 45% and enabling real-time financial and operational reporting. - Wrote, optimized, and maintained advanced SQL queries, stored procedures, and indexing strategies to support analytics on multi-terabyte datasets, improving query performance by 30% and cutting month-end reporting timelines from 5 days to 2 days. - Designed and deployed highly interactive dashboards in Tableau and Power BI, visualizing KPIs for revenue, expenses, operational risks, and customer performance, enabling leadership to make data-driven decisions and saving 40+ reporting hours monthly. - Partnered with senior stakeholders, SMEs, and business users to capture requirements, prepare BRDs/FRDs, and translate business needs into scalable data models and analytical frameworks, reducing rework by 18% and improving IT–business alignment. - Conducted exploratory data analysis (EDA) using Python and R (Pandas, NumPy, Seaborn) to uncover hidden patterns in customer churn, sales, and operational risks, providing actionable insights that boosted customer retention by 12%. - Built and deployed machine learning models (logistic regression, XGBoost, random forests) for predictive analytics, improving credit risk scoring accuracy by 22% and reducing false positives in loan approval systems. - Implemented robust data validation and quality frameworks using Great Expectations and SQL scripts, integrating reconciliation checks and monitoring pipelines that improved reporting accuracy by 20% and increased trust in analytics. - Collaborated with compliance and IT security teams to design and implement SOX and GDPR-compliant data governance controls, including access rights, encryption, and audit trails, ensuring zero audit findings during regulatory reviews. - Delivered ad-hoc variance analyses, reconciliations, and cost-benefit models for CFO and senior executives, uncovering \$2.1M in annual savings by identifying inefficiencies in vendor contracts and procurement spend. - Mentored and trained 4 junior analysts on SQL performance tuning, dashboard development, and data governance best practices, creating reusable templates and improving analytics delivery speed by 25%.	

Data Analyst Sony India	July 2021 – Dec 2023
- Collected, cleaned, and standardized financial, sales, and operational datasets from ERP (SAP MM/SD), CRM, and HR systems using SQL, Python, and Excel automation, improving data quality by 20% and ensuring accuracy for monthly reports and compliance submissions. - Designed and implemented interactive Tableau and Power BI dashboards to track product profitability, revenue growth, and customer segmentation, reducing manual reporting effort by 70% and enhancing visibility for senior management. - Built ETL workflows using SSIS and Alteryx to consolidate structured and unstructured data into a unified Snowflake repository, streamlining reporting processes, eliminating silos, and reducing data preparation time by 35%. - Conducted detailed exploratory and predictive analysis in Python and R, applying regression, clustering, and classification models to identify borrower and customer behavior patterns, improving targeted marketing campaigns and boosting conversion rates by 15%. - Collaborated with finance and supply chain teams to build forecasting and demand planning models using ARIMA and Prophet, reducing inventory stock-outs by 10% and improving working capital efficiency across product categories. - Automated operational and financial reporting processes using SQL stored procedures, Excel VBA macros, and Power Query, reducing reporting timelines by 40% while improving accuracy and minimizing human errors. - Performed variance analysis, root cause investigations, and cost-benefit studies to identify process inefficiencies, leading to reallocation of budgets and improving profitability across business verticals. - Partnered with IT and engineering teams to migrate legacy Excel-based reporting systems into Snowflake and Power BI, enabling scalable self-service analytics and reducing infrastructure costs by 20%. - Worked with compliance teams to establish and monitor data governance frameworks aligned with RBI, SOX, and GDPR standards, ensuring audit readiness and minimizing regulatory risks. - Mentored junior analysts in SQL querying, dashboard creation, and predictive analytics, standardizing practices, improving delivery speed by 30%, and driving adoption of modern analytics tools across the organization.	

TECHNICAL SKILLS

- Programming & Scripting:** Python (Pandas, NumPy, Matplotlib, Seaborn), R, SQL, VBA, Shell scripting
- Data Visualization & BI:** Tableau, Power BI, Looker, QlikView, Excel (Power Query, Pivot, VBA Macros)
- Databases & Warehousing:** Snowflake, Redshift, BigQuery, SQL Server, Oracle, MySQL, PostgreSQL
- ETL & Data Pipelines:** Alteryx, Apache Airflow, SSIS, Talend, Azure Data Factory, AWS Glue
- Statistics & Modeling:** Regression, Time-Series Forecasting (ARIMA, Prophet), Hypothesis Testing, Clustering
- Machine Learning (Applied):** Scikit-learn, XGBoost, LightGBM for predictive analytics and classification
- Cloud Platforms:** AWS (S3, Redshift), Azure (Synapse, Data Lake), GCP (BigQuery, Vertex AI for analytics)
- Big Data Tools:** Apache Spark, PySpark, Databricks, Hadoop (data processing and large-scale analytics)
- Data Quality & Governance:** Great Expectations, Monte Carlo, Data Validation Frameworks, GDPR, SOX
- Reporting & Automation:** Advanced Excel (Power Query, VBA), SAP BI, Business Objects, SSRS
- Collaboration & Project Tools:** JIRA, Confluence, ServiceNow, Agile (Scrum/Kanban), SDLC processes
- Other Tools:** Git, GitHub Actions, Docker (analytics containerization), REST API integrations

EDUCATION

Masters in Business and Info Science New Jersey institute of technology, USA	Jan 2024 – May 2025
Bachelors in Computer Science Stanley College of Engineering & Technology, India	June 2019 - April 2023
