

Daniel Vu

San Francisco CA | 832 350 6286 | daniel.h.vu@gmail.com

github.com/d-vu | linkedin.com/in/danielhvu

TECHNICAL SKILLS

Front-End: Javascript, React.js, Redux.js, Angular.js Backbone.js, D3.js, C#, .NET

Back-End: Microsoft SQL Server, Redis, Node.js, Express.js, MySQL, PostgreSQL, MongoDB

Deployment: Docker, Mocha, Chai, Travis CI, Digital Ocean, AWS

API: GitHub, IBM Watson, Facebook, Open Calais, Google Maps

PROFESSIONAL EXPERIENCE

Integrated Electrical Services (IES) - Software Developer 2014-2016

- Developed My-IES, a secure and custom made employee web portal, utilizing asp.net and SQL Server
- Upgraded and optimized internal-web applications to .NET 4.5/ IIS 7.5/ SQL Server 2012
- Integrated Infrastructure Solution MAS 200 database into SAP BPC to report earnings to SEC
- Automated importation of data into Salesforce for contracts valued over \$2 million
- Created SQL script for the Affordable Care Act by querying demographic data from ADP and our ERP system

OpenLink Financial - Software Developer Intern 2013-2014

- Engage in code development through testing, debugging, and refactoring on OpenLink projects
- Securely deployed Endur project to client's sites
- Delivered presentations on the internal programs and tools utilized in software development

ENGINEERING PROJECTS

GitGoing | www.gitgoing.io

Real time web collaborative code editor with built in source control functionalities

- Facilitated continuous integration, testing, and deployment through AWS, Docker, Travis CI, Mocha and Chai
- Architected front-end using React.js and Redux.js
- Utilized Redis cache to limit GitHub API calls and support numerous users
- Managed real time code collaboration and code syntax highlighting using Socket.io and Ace Redux library

World Wide News

Web application that provides a broad perspective of current events from publishers around the world

- Displayed an RSS feed through Calais NLP and Express server in order to show article categories
- Implemented Google Maps API to display the geographical location of the article's publication
- Integrated Facebook messenger to work concurrently with the React.js state behaviors of each article

Tru.ly

Text sentiment analyzer and visualizer

- Utilized IBM watson to categorized text sentiments by social tendencies, language style and emotion
- Rendered dynamic and interactive sentiment analysis with D3.js
- Designed a clean and concise UI/UX for the front-end using React.js

EDUCATION

Hack Reactor, *Advanced Software Engineering Immersive Program* 2016-2016

University of Houston, *B.S. Computer Science/Minor in Mathematics* 2009-2013

HONORS

Microsoft Certified Professional (MCP) Member

Phi Theta Kappa, Academic Honor Society

Dean's List, University of Houston
