Major Projects

- Capstone Project: Part of a 17-member team in a year-long project to design and build a multi-user, n-tier, data-driven application with desktop and web front ends. Project included a shared repository on GitHub, Scrum-style project management, unit tests and student led teams.
- Java III: Final Project: Built a web-based development project using servlets and Java server pages (JSPs) through IntelliJ IDEA Ultimate. Java, HTML, JavaScript, and CSS were all involved.
<https://github.com/dtran1996/gamecollection>
- .NET II: Final Project: Individual project to design and build a multi-tier, multi-user, database-driven desktop application using a hand-coded database with stored procedures for all data operations and unit tests for logic methods. For tracking my extensive collection of video games.
- .NET III: Upgraded my project from .NET 2 to an ASP.NET MVC web application.
