SUMMARY

- Results-driven Business Analyst and Quality Assurance Analyst with 4+ years of combined experience in manual and automated testing, business analysis, and project coordination across web, mobile, and API platforms.
- Skilled in gathering and documenting business requirements, translating them into detailed functional specifications, and validating solutions through rigorous testing.
- Strong background in cross-team collaboration with product owners, developers, and stakeholders to ensure alignment of business requirements with technical implementations and testing outcomes.
- Proficient in automation frameworks (Selenium WebDriver, TestNG, Cucumber), API testing (Postman), and tools such as JIRA, Confluence, Visio, and Jenkins to improve quality and efficiency.
- Demonstrated leadership in mentoring teams, conducting code reviews, and facilitating cross-functional communication to ensure timely delivery of high-quality products.
- Technical expertise in Java, Python, SQL, cloud platforms (AWS), CI/CD pipelines, and performance testing.
- Adept at designing and executing test plans, including functional, UI, API, regression, and exploratory testing, ensuring robust product quality across multiple platforms.
- Skilled in creating clear and comprehensive documentation such as BRDs, FRDs, use cases, test cases, and traceability matrices to support both development and QA teams.
- Experienced in integrating automated testing within CI/CD pipelines using Jenkins and Git, accelerating deployment cycles while maintaining production stability and minimizing defects.
- Experience across diverse domains including media streaming, supply chain optimization, finance, and smart agriculture.

EDUCATION

Florida Institute of Technology – Melbourne, FL | GPA 3.6

May 2025

Master of Science in Engineering Management

GITAM UNIVERSITY - Hyderabad, India | GPA 3.2

June 2021

Bachelor of Electronics and Communications Engineering

WORK EXPERIENCE

Business Analyst & Quality Assurance Specialist

Accenture – Contractor at Comcast, Hyderabad, India

July 2021 – Aug 2023

- Gathered and analyzed business requirements, creating BRDs, FRDs, and use cases aligned with stakeholder expectations.
- Developed and maintained Selenium-based automation frameworks, reducing regression testing time by 40%.
- Designed and executed comprehensive test plans for web and mobile streaming applications using manual and automated approaches.
- Validated APIs with Postman and performed backend data verification using SQL queries to ensure data integrity.
- Managed defect lifecycle using JIRA and collaborated closely with development teams to resolve issues promptly.
- Integrated automated tests into CI/CD pipelines (Jenkins, Git), improving deployment reliability and speed.
- Facilitated Agile ceremonies, contributed to sprint planning, and ensured test coverage met acceptance criteria.
- Mentored junior analysts and QA team members on best practices, testing tools, and documentation standards.
- Supported UAT efforts by coordinating between business stakeholders and QA teams, ensuring seamless production rollouts.

Business Analyst | Sabita Enterprises – Hyderabad, India

Aug 2019 – June 2021

- Led requirement elicitation sessions with clients, translating business needs into detailed functional specifications.
- Created and maintained requirement documentation (BRD, FRD, FSD), UML diagrams, and process flowcharts using Visio and Rational Rose.
- Assisted QA teams in developing test scenarios and validating test cases against business objectives.
- Conducted competitive analysis and software comparisons to support client decision-making processes.
- Identified risks and implemented mitigation strategies to reduce project delays and quality issues.
- Coordinated cross-functional teams, tracking progress via JIRA and ensuring adherence to delivery timelines.

Junior Business Analyst & QA Coordinator

Electronics Corporation of India Limited - Hyderabad, India

May 2018 – July 2019

- Collaborated with financial managers to implement portfolio management tools and document business requirements.
- Supported risk assessment and prioritization of features for development and testing cycles.
- Facilitated Joint Application Development (JAD) sessions, aligning stakeholders and refining requirements.
- Participated in bug triage meetings, contributing business insights to enhance product functionality.

KEY PROJECTS

Amazon Logistics and Supply Chain Optimization | Florida Institute of Technology – Engineering Management

- Analyzed Amazon’s supply chain performance, focusing on efficiency, last-mile delivery, inventory control, and data-driven decision-making.
- Applied quality assurance principles like process mapping, bottleneck identification, and performance measurement to recommend logistics improvements.
- Presented actionable insights to enhance operational speed, cost-efficiency, and customer satisfaction—skills transferable to QA process optimization.

Walmart vs. Target: Pricing Strategy Analysis | Florida Institute of Technology – Data Analytics & BI

- Built and executed KNIME-based workflows to evaluate pricing, discount effectiveness, and profit margins across competing retailers.
- Used classification (Decision Trees) and clustering (K-Means) to segment underperforming product categories and uncover pricing gaps.
- Delivered strategic recommendations using visual analytics (scatter plots, box plots, bar charts), reinforcing strengths in data analysis and test evaluation

Smart Agriculture – IoT-Driven Project Engineering| GITAM University (B. Tech)

Florida Institute of Technology (Master’s Continuation)

- Initiated as a B. Tech capstone project, this smart farming system was designed to integrate IoT sensors, real-time field monitoring, and automated yield analysis to optimize agricultural output.
- Continued development during Master’s with enhanced focus on project management, quality assurance, and engineering scalability.
- Created full documentation including Gantt charts, WBS, cost modeling, QA plans, and a sustainability roadmap.
- Emphasized real-time data collection, automated alerts, and environmental impact reduction, aligning with SDLC principles and QA in embedded systems.

Organizational Behavior: Employee Engagement & Burnout Study

Florida Institute of Technology – Organizational Behavior

- Led a study on the impact of balanced feedback, flexible work policies, and empathetic leadership on employee performance.
- Presented a two-way feedback model to enhance communication and reduce stress—skills essential for collaborative QA environments and agile teams.

CORE COMPETENCIES

Business Requirements Gathering & Documentation (**BRD, FRD, Use Cases**)

Manual & Automated Testing (**Selenium, TestNG, Cucumber**)

API Testing & Validation (**Postman, Swagger**)

SQL-Based Backend Testing & Data Validation

Agile & Scrum Methodologies

Defect Tracking & Reporting (**JIRA, Confluence**)

CI/CD Pipeline Integration (**Jenkins, Git**)

Performance & Security Testing (**JMeter, OWASP ZAP**)

Cross-functional Team Collaboration & Stakeholder Management

Risk Analysis & Mitigation

Test Strategy Development & Execution

TECHNICAL SKILLS

Automation Tools: Selenium WebDriver, TestNG, Cucumber

API Testing: Postman

Test Management: TestRail, Browser Stack

Performance & Security Testing: JMeter, OWASP ZAP

Testing Methodologies: SDLC, STLC, Shift-Left Testing, Agile (Scrum)

Programming & Scripting Languages: Java, Python, SQL, HTML5, CSS, JavaScript

Business Analysis & Documentation: JIRA, Confluence, Requirements Gathering, Use Case Documentation, Risk Analysis, JAD Sessions, BRD, FRD, User Stories, Acceptance Criteria

CI/CD & Version Control: Jenkins, Git, GitHub

Databases: MySQL, PostgreSQL

Cloud & Virtual Environments: AWS (EC2, S3), Virtual Machines
