

Mani Madhukar Kothagatla

312-838-8610 | Chicago, IL | manimadhukar07@gmail.com | [LinkedIn](#)

Summary

A passionate **Data Analyst** with **6+** years of experience delivering **KPI reporting, dashboards, and ad hoc insights** across **financial services, retail, and healthcare**. Advanced hands-on skills in **SQL, Excel, and BI** development using **Power BI / Tableau** to translate business questions into executive-ready, actionable analytics. Proven ability to partner with **business, product, and operations** teams to define **metrics and KPIs**, standardize **business definitions**, and build scalable **self-service reporting** with reliable refresh and documentation. Strong focus on trusted data through **data validation, reconciliation, and data quality** controls, with exposure to **Databricks** and foundational **Python** for analysis automation. Adept at **data storytelling**, stakeholder communication, and **AI-assisted analytics / prompting** to accelerate insight generation while maintaining accuracy and governance.

Experience

Senior Data Analyst

Feb 2024 – Present

Northern Trust Bank

Chicago, IL

- Worked on in-house **financial analytics platforms** supporting wealth management and asset servicing teams, delivering high-quality **data insights** for business decision-making.
- Performed advanced **data analysis** using **SQL** and **Python** to analyze portfolio performance, client transactions, and risk metrics across multiple data sources.
- Designed and maintained robust **ETL pipelines** using **Informatica** and **SQL**, ensuring reliable **data integration** from internal systems and external financial feeds.
- Built interactive **dashboards** and **reports** in **Tableau** and **Power BI** to monitor key financial indicators and support leadership reporting.
- Collaborated with **cross-functional teams** including risk, compliance, and operations to translate business requirements into scalable **data solutions**.
- Applied **statistical analysis** and **data modeling** techniques to identify trends, anomalies, and opportunities within large financial datasets.
- Ensured strong **data quality** and **data governance** practices by implementing validation checks and maintaining data consistency across systems.
- Optimized complex **SQL queries** and improved overall **data performance** for reporting and analytics workflows.
- Automated recurring **reporting processes** using **Python** and scheduling tools like **Airflow**, reducing manual effort and improving efficiency.
- Utilized **AWS** services such as **S3** and **Redshift** for scalable **data storage** and **data warehousing** solutions.
- Mentored junior analysts and promoted best practices in **data visualization, analytics, and documentation**.

Data Analyst

Apr 2023 – Jan 2024

Walgreens

Deerfield, IL

- Contributed to in-house **retail analytics systems** by analyzing **point-of-sale (POS)** and **pharmacy data** to support merchandising and store-level decision making.
- Transformed raw **transactional data** into structured datasets using **SQL** and **Excel**, enabling consistent **business reporting** across multiple departments.
- Developed **data visualizations** in **Tableau** to track sales trends, seasonal demand, and product performance across regions.
- Partnered with **business stakeholders** to gather requirements and deliver tailored **analytical solutions** for inventory planning and demand forecasting.
- Conducted **data profiling** and **data validation** to identify inconsistencies and improve overall **data reliability**.
- Used **Python** (Pandas) for **data wrangling** and preparation, supporting downstream analytics and reporting use cases.
- Supported **inventory analytics** workflows by analyzing stock movement and replenishment patterns to reduce stockouts and overstock situations.
- Created reusable **reporting templates** and streamlined **Excel-based analysis** for recurring business needs.
- Worked with **Teradata** and enterprise data systems to extract and manage large-scale retail datasets.
- Assisted in maintaining **data documentation** and improving transparency of data definitions across internal teams.

- Streamline **HELOC** and **mortgage origination workflows** using **Python**, **SQL**, and **Snowflake**, automating underwriting logic with **dbt** to reduce loan approval cycles by **45%** for major banking clients.
- Develop **predictive risk and segmentation models** with **Scikit-learn** and **XGBoost** to assess borrower **FICO**, **DTI**, and **LTV** metrics, lowering default probability by **22%** across portfolios.
- Build **real-time ETL pipelines** with **Kafka**, **AWS Lambda**, and **Redshift** to ingest multi-source borrower data and improve overall data quality through automated validation checks.
- Create **Power BI** and **Tableau dashboards** to visualize key lending **KPIs**—drawdown rates, prepayments, and risk scores—accelerating executive reporting and decision-making.
- Implement **regulatory compliance monitoring** with **Airflow** and **Python**, ensuring **FDIC/OCC adherence** and eliminating **95%** of audit exceptions during quarterly reviews.
- Conduct **A/B testing** and **anomaly detection** using **Azure ML** to identify pricing inefficiencies and improve customer loan acceptance rates.

Education

Campbellsville University

Master's in information technology; GPA: 3.7/4.0

Louisville KY-USA

Jul 2024 – Jul 2025

Technical Skills

Programming and Data Processing: Python, PySpark, SQL, Scala, Shell Scripting**Databases:** SQL Server, Oracle, MySQL, PostgreSQL, Snowflake (SnowSQL, Snowpipe), MongoDB, DynamoDB, Azure SQL, Azure Cosmos DB, Amazon Redshift, HDFS**Cloud Platforms:** AWS (EC2, S3, SageMaker, Lambda, Glue, Redshift, EMR, CloudWatch, Kinesis, Athena, DynamoDB, CloudFormation), GCP (BigQuery, Dataproc, Composer, Storage), Azure (Data Factory, Data Lake, Databricks, Blob Storage, Logic Apps, Cosmos DB), Palantir Foundry**ETL and Data Engineering:** Airflow, AWS Glue, Azure Data Factory, Databricks, Palantir Pipeline Builder, Kubernetes, Docker**Big Data and Analytics:** Spark, Hive, Pig, Kafka, MLlib, GCP BigQuery**Business Intelligence and Visualization:** Power BI, Tableau, Streamlit, DEEP Workshop, Executive Dashboards**Other Tools:** Git, GitHub, JIRA, Bitbucket, Postman
