

DINESH VUPPALAPATI | Java Full Stack Developer

DE | +1 302-609-3680 | dhinuvcn1998@gmail.com | LinkedIn

SUMMARY

Java Full Stack Developer with 4+ years of experience building cloud-native, scalable applications in healthcare and financial domains. Skilled in Java 17/21, Spring Boot, Spring WebFlux, GraphQL, REST APIs, PostgreSQL, and Hibernate ORM for secure, high-performance backend systems. Experienced in React.js, Redux, Tailwind, and ECharts for interactive dashboards and real-time insights. Proficient in CI/CD, Docker, Kubernetes, and AWS (ECS, Lambda, API Gateway, CloudFormation, S3) for automated deployments and high-availability services. Expertise in Kafka, Flink, Spark for real-time data processing, predictive analytics, and compliance reporting. Knowledgeable in HIPAA, FHIR, PCI-DSS, and GDPR compliance.

EDUCATION

Masters in Information System Technologies & Assurance | Wilmington University, DE

May 2025

Bachelors in Electronics and Communication Engineering | Sri Venkateswara College of Engineering, India

Dec 2020

EXPERIENCE

DaVita, DE - USA

June 2025 - Current

Java Full Stack Developer

- Collaborate with clinicians, compliance officers, and business analysts to translate dialysis workflows into HIPAA/FHIR-compliant applications, ensuring secure, traceable, and audit-ready patient data.
- Break down complex regulatory requirements into actionable user stories with acceptance criteria, improving sprint delivery predictability and cross-functional collaboration.
- Design and implement microservices using Java 17, Spring Boot, WebFlux, integrating REST/GraphQL APIs and PostgreSQL, reducing patient scheduling conflicts by 28%.
- Develop responsive React.js interfaces with Redux and Tailwind, including interactive dashboards, enhancing clinician task efficiency and reducing task completion time by 32%.
- Stream real-time dialysis telemetry via Apache Kafka and Flink to compute adherence KPIs and trigger alerts, enabling early interventions and improving patient session attendance.
- Build and maintain CI/CD pipelines and automated deployments using GitHub Actions, SonarQube, Docker, AWS ECS, Lambda, and CloudFormation, ensuring blue/green releases, minimal downtime, and operational cost savings.
- Optimize system performance and reliability by tuning backpressure, indexing PostgreSQL, and scaling Kafka partitions, achieving 99.97% system availability while maintaining HIPAA compliance.

DaVita, DE - USA

Feb 2025 - May 2025

Java Full Stack Developer Intern

- Collaborated with senior developers and business analysts to document clinic workflows and map intake-to-discharge data elements into HIPAA/FHIR-compliant resources, improving requirement clarity and reducing review delays.
- Developed prototype Spring Boot REST APIs and GraphQL services, integrating with PostgreSQL test schemas to accelerate API contract approvals by two sprints.
- Built responsive React.js components with Redux and Tailwind for clinician worklists and session checklists, improving usability and reducing task switching during pilot tests.
- Assisted in CI/CD pipeline setup with GitHub Actions, SonarQube, JUnit5/Mockito, and Cypress, enhancing build reliability and shortening pull request review cycles.
- Containerized intern-developed services using Docker and deployed to AWS ECS via CloudFormation, enabling repeatable sandbox environments and reducing QA setup time from two days to a few hours.

CitiusTech, India

May 2022 - Jul 2023

Java Full Stack Developer

- Designed modular clinical workflows with Java 21 and SOLID principles, enabling reusable components for SaMD features and accelerating FDA-compliant module development.
- Built dynamic React.js dashboards with ECharts, MongoDB, and Express.js to visualize patient vitals and device diagnostics in real time, enhancing remote care decision-making and reducing clinician response time by 30%.
- Automated microservice deployment and backend data ingestion using AWS ECS, Lambda, CloudFormation, S3, and Step Functions, improving scalability, reducing environment provisioning time, and enabling near real-time processing for proactive care alerts.
- Processed patient telemetry streams via Apache Flink and Kafka to support predictive analytics and early alerting for chronic conditions, improving remote monitoring outcomes.
- Integrated device-generated health data with relational databases using Hibernate ORM and JPA, ensuring accurate persistence and faster retrieval of patient history.
- Developed CI/CD pipelines with Jenkins, GitHub Actions, and SonarQube to automate build, test, and deployment for connected health services, improving release efficiency while maintaining compliance traceability.
- Containerized full-stack applications with Docker and managed deployments through Kubernetes, ensuring high availability for real-time monitoring platforms across hospital networks.
- Engineered secure APIs with Spring WebFlux, Spring Boot, GraphQL, and OpenAPI, deployed via AWS API Gateway and Lambda, supporting encrypted device-to-cloud data flow while maintaining HIPAA and FHIR compliance.
- Collaborated with DevOps and QA teams to implement health checks, rolling updates, and monitoring via Prometheus and Grafana, improving deployment stability and reducing incident recovery time by 50%.

Full Stack Developer

- Developed scalable microservices with Java 17, Spring Boot, and Kafka to automate regulatory data flows for AML reporting, reducing manual intervention and improving data accuracy.
- Modernized compliance dashboards by designing responsive React.js and Redux interfaces with Tailwind CSS, empowering risk analysts to visualize exposure trends in real-time.
- Integrated secure APIs with Spring Security, OAuth2, and JWT, enabling role-based access for customer risk profiling while maintaining GDPR and PCI-DSS compliance.
- Refactored legacy monolithic systems into cloud-native, containerized services using Docker, Kubernetes, and AWS ECS, improving system availability to 99.95% and supporting high-volume financial transaction monitoring.
- Implemented automated testing with JUnit 5, Mockito, and Cypress, enhancing reliability of fraud detection modules and decreasing post-deployment defects.
- Designed and deployed serverless workflows with AWS Lambda, API Gateway, and DynamoDB to process large compliance data feeds, reducing infrastructure costs and enabling near real-time risk scoring.
- Built real-time risk scoring pipelines using Kafka, Spark, and REST APIs with PostgreSQL for secure data storage and audit logging, cutting detection latency by 50%.
- Monitored performance and logs via ELK Stack to proactively detect anomalies in risk engines, improving SLA adherence for regulatory reporting.
- Collaborated with cross-functional teams to implement CI/CD pipelines using Jenkins and GitHub Actions, accelerating deployment of compliance software updates and integrating new risk rules efficiently.

TECHNICAL SKILLS

Languages & Frontend Development:	Java 17/21, HTML, CSS, JavaScript, TypeScript, SQL, Node.js, React.js, Redux, Tailwind CSS, ECharts
Backend & APIs:	Spring Boot, Spring WebFlux, Spring Security, GraphQL, Express.js, RESTful APIs, OpenAPI, OAuth2, JWT, Hibernate ORM, JPA
Cloud:	AWS ECS, Lambda, API Gateway, S3, CloudFormation, Step Functions
DevOps:	Docker, Kubernetes, Jenkins, GitHub Actions, SonarQube, CI/CD, Blue/Green Deployments
Data & Streaming:	PostgreSQL, MongoDB, DynamoDB, Apache Kafka, Apache Flink, Apache Spark, Data Modeling, Query Optimization
Testing & Monitoring:	JUnit 5, Mockito, Cypress, Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana)
Security & Compliance:	HIPAA, FHIR, PCI-DSS, GDPR
