PROFESSIONAL SUMMARY

Over 6 years of experience as a Front End Developer, specializing in dynamic UI development for enterprise web applications. Skilled in React, JavaScript (ES6+), HTML5, and CSS3 to create responsive, cross-browser interfaces. Proven collaborator in agile teams driving quality development, clear documentation, and effective troubleshooting. Experienced in integrating backend APIs and utilizing Git for efficient version control.

TECHNICAL SKILLS

- **UI Web Technologies:** HTML4/5, CSS3, SASS, LESS, JavaScript, TypeScript, AJAX, jQuery, JSON, Twitter Bootstrap, React JS, Redox, Flex, ES6, React Native, NodeJS, Responsive Development, APIs Integration, GraphQL
- **IDE, HTML Editor:** Web Strom, Web Matrix, Bonita, Sublime, Dreamweaver, Eclipse, Notepad++
- **Bug Tracking Tools:** Ax soft, JIRA, Bugzilla, Rational Clear quest
- **Languages:** Python, Scala, C++, Java, J2EE
- **Python Frameworks:** Pandas, Flask, Django, Docker
- **Databases:** RDBMS (Oracle, SQL Server, MySQL), No SQL (Mongo DB), AWS, Azure Cassandra
- **SDLC Methods:** SCRUM, Agile
- **Testing Tools and Logging Frame:** Junit3.8/4.0, Load runner, Jasmine, Selenium, T-probe, Easy Mock, Manual Testing
- **Version Control:** VSS, CVS, SVN, GitHub, Git
- **Automation Tools:** Jenkins, Chef, Puppet, Capistrano
- **Web Development Practices:** Debugging Tools, Design Tools, Adobe Experience Manager, Accessibility Best Practices, Web Design Patterns

PROFESSIONAL EXPERIENCE

Verizon

Sep 2023 - Mar 2025

Frontend Developer

NJ

Collaborated with cross-functional teams—including design, business, technology, and QA—to develop interactive UI pages using HTML5, CSS3, and React JS, ensuring seamless integration with Salesforce Commerce Cloud.

- Designed and implemented intuitive, responsive React applications with a focus on enhancing usability and user engagement.
- Managed source code changes with Git, ensuring effective version control and traceability across multiple projects.
- Integrated third-party APIs and JavaScript libraries using Node.js and AJAX to expand frontend functionality and support data exchange between application layers.
- Developed modular React components with robust state management and client-side form validation to maintain data integrity and dynamic UI interactions.
- Engineered mobile-first web designs using HTML5 and CSS3, achieving cross-browser and cross-device compatibility.
- Created maintainable CSS code with Less preprocessor to enhance UI styling and scalability.
- Collaborated with backend teams to optimize data flow, debug issues, and ensure quality through comprehensive documentation and adherence to best practices.

Aetna

Mar 2022 - Aug 2023

Front-End Developer

GA

Developed customer-facing UI pages for advertisement management using Backbone.js, HTML5, CSS, and SASS, driving business growth and improved user engagement.

- Integrated XML with GraphQL in React applications to facilitate flexible and efficient healthcare data retrieval.
- Utilized Git for version control to manage source code versions, supporting Test-Driven Development practices and ensuring a clean codebase.
- Enhanced user interfaces by designing new web features with React.js, adhering to MVC frameworks and modern development practices.
- Implemented AJAX, JSON, and XML technologies to consume data from APIs and web services, building dynamic and interactive applications.
- Integrated third-party libraries and APIs into React Native projects to enrich functionality and support seamless user experiences.
- Optimized application performance with advanced Webpack configurations—including hot module replacement, code splitting, and tree-shaking—to accelerate page load times.
- Ensured adherence to accessibility and responsive design principles across all UI pages, resolving cross-browser compatibility issues and delivering pixel-perfect experiences.
- Collaborated with designers and backend developers to produce high-quality, maintainable web applications while maintaining clear project documentation.

CYIENT

Apr 2019 - Aug 2021

FRONT END DEVELOPER

IND

CLIENT NAME: CYIENT, IND Apr 2019-Aug 2021

JOB ROLE: FRONT END DEVELOPER

- Gather Requirements from the End clients and create application design documents.
- Used HTML, HTML5, CSS, JavaScript, and AngularJS, ReactJS.
- Developed and maintained the front end of an e-commerce website, resulting in a 20% increase in conversion rates through improved user interface and page load times.
- Utilized Python scripting for automation tasks within the frontend development workflow, enhancing efficiency in data processing, file manipulation, and routine operations.
- Having solid experience with Linux OS and middleware systems is quite valuable. Linux is widely used in various domains, from server management to embedded systems, and having expertise in it can open up a lot of opportunities.
- Implemented responsive design techniques to ensure a seamless shopping experience across desktop and mobile devices, leading to a 15% growth in mobile sales.
- Document security best practices for Linux system management, including guidelines for secure user authentication, access control, network configuration, and software patch management.
- Used Ext JS Dom query's various CSS selectors to navigate through the DOM.
- Worked on extensive use of Event Handling Modal such as Listener and dispatcher in Ajax framework and JavaScript.
- Integrated Python scripts into the frontend development pipeline, automating build processes, testing, and deployment to streamline the development workflow.
- Begin by assessing the current state of Linux system management practices within your organization.
- Adept at optimizing web performance, ensuring fast page load times and a smooth user experience.
- Strong understanding of cross-browser compatibility and responsive design principles.
- Managing SAN storage involves tasks like provisioning LUNs (Logical Unit Numbers), configuring RAID levels, monitoring storage performance, and ensuring data integrity.
- Knowledge of design tools like Adobe Photoshop and Sketch to collaborate effectively with designers.
- Conducted performance tuning and optimization of JBoss EAP applications.
- Familiarity with version control systems like Git for efficient code collaboration.
- Worked on the simple search and advanced search using jQuery JavaScript library.
- Developed data insertion forms and validated them using JavaScript.
- Handled all the client-side validations, slide show, hide and show controls, dropdown menus, and tab navigation using JQUERY.
- Used JavaScript and XML to update a portion of a web page thus reducing bandwidth usage and load time and adding modal dialog in web pages to get user input and requests.
- Develop procedures for disaster recovery and incident response to minimize the impact of system failures or security breaches.
- Worked on writing UNIX scripts for scheduling some backend jobs.
- Implemented Python scripts to automate repetitive frontend development tasks, reducing development time and minimizing errors in routine processes.
- Setting up and maintaining server clusters to ensure high availability and fault tolerance. This involves configuring cluster software (such as Pacemaker or Veritas Cluster Server), managing failover mechanisms, and performing cluster health checks.
- Collaborated with the design team to translate mockups and wireframes into pixel-perfect, interactive web interfaces that aligned with the brand's identity.
- Shell scripts allow you to automate repetitive tasks such as file manipulation, system monitoring, log parsing, and backup procedures. By scripting these tasks, you can save time and reduce the risk of human error.
- Responsible for deploying applications on Stage and Production environment.
- Coordinated project activities and ensured that all project phases were followed and documented properly.
- Developed the Front-End and User Interface of the application using Java script, ES6, React, and Redux.
- integrating different software components and enabling communication between them, which is essential in complex software architectures.
- By incorporating error handling mechanisms and logging functionality into your scripts, you can improve reliability and troubleshoot issues more effectively.

EDUCATION DETAILS

Vignan University
Bachelors, Computer Science

2016 - 2020
