EDUCATION

University of Dayton

Masters in Computer science

Dayton, OH, USA

Aug 2021 - May 2023

Sreyas Institute of Engineering and Technology

Bachelors in Electronics and Communication Engineering

Hyderabad, Telangana, India

Aug 2014 - May 2018

TECHNICAL SKILLS

Programming Languages: Java,C/C++ ,Python,SQL,JavaScript,TypeScript,Kotlin,HTML/CSS

Testing Frameworks: JUnit,TestNG,Mockito,Selenium WebDriver

Development Tools: IntelliJ IDEA,Eclipse,Apache Maven,Gradle,Git,SonarQube,CheckStyle,FindBugs

CI/CD Tools: Jenkins,Docker,Kubernetes,Gitlab CI/CD

Database Access: JDBC,Trino,JPA

Databases: MySQL,PostgresSQL,Oracle Database,Cassandra,MongoDB,Elastic search,Apache Kafka, Apache Solr

WORK EXPERIENCE

Java Backend Developer

Apple, CA, USA

Oct 2023 - March 2024

- Developed and maintained microservices-based backend systems using Java and Spring Boot framework, contributing to the scalability and reliability of Apple's services.
- oversaw the on-premises infrastructure's transfer to the AWS cloud environment. For safe and scalable application hosting, S3 storage, RDS databases, and EC2 instances were put into place.
- Integrated Elasticsearch for efficient indexing and searching of large datasets, enhancing search functionalities and improving user experience.
- Configured IAM roles, security groups, and network ACLs to restrict access and prevent unauthorized activities, enhancing the overall security posture of AWS resources.
- Utilized Cassandra as a NoSQL database for high-performance data storage and retrieval, ensuring optimal performance and reliability of backend services.
- Optimized Kafka cluster configuration, partitioning strategies, and replication settings to improve system performance, reliability, and fault tolerance.
- Participated in code reviews, performance optimizations, and troubleshooting sessions to ensure the quality and stability of backend applications.
- Actively involved in the design and implementation of RESTful APIs, adhering to best practices and industry standards.
- Implemented monitoring and logging solutions to ensure the observability and maintainability of backend systems.
- Deployed and managed EC2 instances to host a high-traffic web application using AWS Auto Scaling and Elastic Load Balancing.

Software Engineer

Global atlantic financial group, Indianapolis, USA

Dec 2021 - june 2023

- Experience in understanding the SDLC phases like the Requirements Specification, Analysis, Design, Implementation, Testing, Deployment and Maintenance.
- Implemented software test automation techniques, including Test-Driven Development (TDD), utilizing frameworks such as JEST and Mockito to automate testing processes.
- Designed and developed various web and enterprise business applications and implementing and testing of software systems in Java, J2EE, REST API, Spark SQL and AWS Technologies.
- Working knowledge with XML, XST, and XSLT by integrating and using them in Java Environment. Experience in Core Java, Multi-threaded Programming, Data structures, Algorithms and Collections framework and design patterns.
- Achieved 30 percent cost savings by optimizing resource utilization through AWS Auto Scaling and Reserved Instances.
- Implemented Spring Bean Factory to create proxid object using AOP framework and Implemented RESTful Web Services using Jersey.

- Implemented monitoring and alerting solutions using Kafka monitoring tools to ensure the health and stability of Kafka clusters.
- Experience in managing MongoDB environment from availability, performance, and scalability perspectives.

Full stack java developer

Analogs Tech, Telangana, India

June 2020 - July 2021

- Actively involved in coding using Java1.8, Spring 4.x to develop features from end to end.
- Designed and implemented an application using Spring Boot, Spring IOC, Spring transactions, Dependency Injection, Spring Annotations, Spring AOP, Spring Actuator, Spring Container managed transactions, Hibernate.
- Demonstrated experience with cloud providers such as AWS or Azure, leveraging their services and infrastructure to deploy, manage, and scale applications effectively.
- Implemented RESTful APIs to facilitate seamless communication between distributed components of applications, ensuring interoperability and scalability.
- Used Spring Security for authentication and authorization of users, Spring JDBC for easy database operations using JDBC template, writing row mappers and Spring Boot easy bootstrap applications from scratch.
- Leveraged Spring features to enhance application performance, scalability, and maintainability, ensuring alignment with project objectives.
- Worked on data extraction in loading JSON data from the server-side content into MongoDB.
- Managed relational databases such as DB2 and PostgreSQL for over 3 years, handling tasks including database design, querying, optimization, and maintenance.
- Developed all REST APIs using Hystrix commands and Feign clients for efficient fault tolerance and handling fallback mechanisms.
- Implemented the function to send and receive AMQP messages on RabbitMQ synchronously and asynchronously, and send JMS message to Apache ActiveMQ on the edge device.

Software Engineer

Pennant Technologies, Telangana, India

May 2019 - Feb 2020

- Developed the presentation layer using Struts Framework, JSP, Servlets, JavaScript, jQuery, and AJAX.
- Developed comprehensive test suites covering unit tests, integration tests, and end-to-end tests, ensuring high code coverage and early detection of defects.
- Designed and developed web pages HTML, JSP, Portlets, AJAX, JSTL, JavaScript, Angular JS, bootstrap, jQuery, and CSS.
- Developed Custom Tags using JSTL.
- Developed Maven scripts to build and deploy the application into WebLogic Application Server and ran Perl shell scripts and implemented auto deployment process.
- Developed the Action classes for handling the requests from the JSP pages.
- Developed Kafka consumers and producers using Java and Spring Boot, ensuring reliable and scalable data ingestion and processing.

PROJECTS

- **Fault Tolerance and Data Replication,,** The project's main goal is to create and put into place distributed systems' fault-tolerant data replication techniques. In the event of node failures and network partitions, the system attempts to guarantee data durability, availability, and consistency by using advanced replication algorithms and fault recovery procedures.
- **Distributed Query Processing in Cloud-based Database Systems,** The goal of the Distributed Query Processing project is to create and execute effective mechanisms for processing queries that are specific to cloud-based database systems. The project aims to increase query performance and scalability in distributed computing settings by creating novel approaches for data distribution, parallel query execution, and optimisation.
- **Performance Optimization and Scalability of Distributed Key-Value Store,** The project uses cutting-edge distributed computing, data storage, and retrieval techniques to maximise the scalability and performance of a distributed key-value store (KVS) system. Reducing latency, increasing throughput, and strengthening the system's capacity to manage growing workloads and concurrent requests will be the main priorities.
